Salesforce Plat-Con-201인기자격증 시험덤프 최신자료 & Plat-Con-201최신버전 시험덤프자료

Salesforce Plat-Con-201 덤프는 고객님의Salesforce Plat-Con-201시험패스요망에 제일 가까운 시험대비자료입니다. 많은 자료정리 필요없이 ExamPassdump에서 제공해드리는 깔끔한Salesforce Plat-Con-201덤프만 있으면 자격증을 절반 취득한것과 같습니다. Salesforce Plat-Con-201 덤프를 다운받아 열람하세요.

최신 Salesforce Consultant Plat-Con-201 무료샘플문제 (Q52-Q57):

질문 # 52

A consultant is working with a client who wants to display specific account information on a Flexcard.

The client wants to include account status, priority level, creation date, and company logo. They also want to include actions such as closing a case, opening a new case, or creating a task.

What is the best approach for the consultant to meet the client's requirements?

- A. Use the Flexcard Designer to create a Flexcard, adding the necessary fields and actions.
- B. Use Omniscripts to ,,, script that display .. required information
- C. Use Integration Procedures to integrate the necessary data
- D. Use Data Mappers to transfer and transform the necessary data.

정답: A

설명:

* FlexCards (B) - FlexCards are the best choice because they are designed to display account-related information such as status, priority level, creation date, and company logo while also allowing the inclusion of actions (e.g., closing a case, opening a new case, creating a task).

* FlexCards provide a user-friendly UI with clickable actions that can trigger OmniScripts or Integration Procedures to process user interactions.

* A. Use OmniScripts - OmniScripts are for step-by-step guided interactions but are not primarily used for displaying static account information.

* C. Use Integration Procedures - Integration Procedures fetch and transform data but do not provide a user interface. They can be used within FlexCards but are not the solution on their own.

* D. Use Data Mappers - Salesforce does not have a native "Data Mappers" tool; data transformation is handled by DataRaptors or Integration Procedures.

Comprehensive and Detailed In-Depth Explanation: Why not the other options?? Salesforce OmniStudio Reference:

* FlexCards Overview

* Configuring Actions in FlexCards

질문 # 53

A business has a requirement to display cases in a console for service agents. Cases can have a variety of statuses, including Active, Closed, or Escalated. When a case is Closed, agents need to be able to reopen the case. When the case is Active or Escalated, agents should not have the option to reopen the case.

Which FlexCard functionality can be used to meet this requirement?

- A. State
- B. Conditional View
- C. Styling
- D. Flyouts

정답: B

설명:

The FlexCard functionality that can be used to meet this requirement is Conditional View. A Conditional View is a property that determines whether a FlexCard element, such as a field or an action, is visible or hidden based on certain conditions. The consultant can use a Conditional View to show or hide the reopen case action based on the status of the case

질문 # 54

A company has a requirement to create a 360° view of their customers using FlexCards. At this company, customer data is stored in Salesforce but also in external legacy systems. A consultant reviews the use cases needed and recommends a FlexCard canvas that contains multiple child cards inside the state of a parent FlexCard. What is the advantage of embedding multiple child cards in this scenario?

- A. Allows multiple data sources to be used
- B. Enables the FlexCard to be used on a community page
- C. Enables easier global styling changes
- D. Allows conditional views with the Toggle element on each child card

정답: D

설명:

The advantage of embedding multiple child cards in this scenario is that it allows multiple data sources to be used. A child card can have its own data source independent of the parent card or other child cards. This way, the consultant can use different data sources for each child card, such as Salesforce objects or external systems, and display them in one FlexCard canvas

질문 # 55

A consultant is working on a project that requires the use of OmniStudio tools to automate complex business processes. The consultant is considering using Decision Matrices and Expression Sets.

What is the primary benefit of using Decision Matrices and Expression Sets in OmniStudio?

- A. They allow for the creation of custom fields.
- **B. They allow for calculations on matrix lookups and variables.**
- C. They facilitate the creation of custom objects.
- D. They enable the creation of custom code.

정답: B

설명:

* Decision Matrices and Expression Sets are used to perform calculations, apply conditional logic, and evaluate business rules in OmniStudio.

* The primary benefit (A) is that they enable calculations on matrix lookups and variables.

* Decision Matrices allow for defining complex rules based on multiple conditions (e.g., determining discount percentages based on customer type).

* Expression Sets allow for calculations and formulas to process data dynamically.

* B. Facilitate the creation of custom objects - Decision Matrices and Expression Sets do not create Salesforce objects; they only manipulate and evaluate data.

* C. Allow for the creation of custom fields - Custom fields are created at the Salesforce object level, not via Decision Matrices or Expression Sets.

* D. Enable the creation of custom code - OmniStudio is a low-code/no-code platform, meaning these tools are designed to replace the need for custom Apex or JavaScript.

Comprehensive and Detailed In-Depth Explanation: Why not the other options?? Salesforce OmniStudio Reference:

* Decision Matrices Overview

* Expression Sets in Calculation Procedures

질문 # 56

A company has a requirement to create a 360° view of their customers using FlexCards. At this company, customer data is stored in Salesforce but also in external legacy systems. A consultant reviews the use cases needed and recommends a FlexCard canvas that contains 5 child FlexCards inside the state of the parent FlexCard.

How many different data sources can be configured using FlexCards in this scenario?

- A. 0
- B. 1
- **C. 2**
- D. 3

정답: C

설명:

The number of different data sources that can be configured using FlexCards in this scenario is 6. A FlexCard can have one data source per state, and a state can have multiple child FlexCards, each with its own data source. Therefore, the parent FlexCard can have one data source for its state, and each of the 5 child FlexCards can have a different data source, making a total of 6 data sources
