## UiPath Agentic Automation Associate Sample Questions (Q58-Q63):

### NEW QUESTION # 58

Which feature can a Citrix Administrator use to publish applications from an Application Group, considering only a subset of the machines in the selected Delivery Group?

- A. Application Lingering
- B. Session Sharing
- C. Tag restriction
- D. Limit Visibility

**Answer: C**

Explanation:

Tag restriction allows an administrator to publish applications from an Application Group but restrict them to run only on a subset of machines within the associated Delivery Group. This provides flexibility in controlling which resources are used for specific applications.

### NEW QUESTION # 59

Scenario: A Citrix Administrator configures the 'Auto connect client drives' user settings to map client drives within the HDX session for all published desktops. The setting is configured in a Baseline Group Policy Object (GPO) and linked to an Organizational Unit (OU) that contains all of the published desktops. When a user launches the desktop, client drives are NOT mapped. What is a possible reason?

- A. The GPO needs to be linked to the User OU.
- B. Desktops need to be restarted for the policy to be applied.
- C. gpupdate /force needs to be executed on all of the machines.
- D. Loopback processing is NOT enabled.

**Answer: D**

Explanation:

User settings in a GPO linked to a machine OU only apply if loopback processing is enabled.

Since the "Auto connect client drives" setting is a user policy but applied at the desktop OU level, loopback processing must be enabled for the policy to take effect within the HDX sessions.

### NEW QUESTION # 60

Which two steps are correct when creating a master image prior to machine catalog creation?  
(Choose two.)

- A. Generalize the image using the Microsoft sysprep tool.
- B. Create a master virtual machine and then install the operating system.
- C. Verify that the hard disk is attached at device location 1.
- D. Install and configure the Virtual Delivery Agent (VDA) software.

**Answer: A,D**

Explanation:

Before creating a machine catalog, the master image must be generalized with Sysprep to prepare it for cloning, and the Virtual Delivery Agent (VDA) software must be installed and configured so the machines can register with the Delivery Controllers.

### NEW QUESTION # 61

Which tool should a Citrix Administrator use to monitor the overall daily performance of a Citrix Virtual Apps and Desktops Site?

- A. Citrix Director
- B. HDX Monitor
- C. CDF Traces
- D. Citrix Studio

**Answer: A**

Explanation:

Citrix Director is the monitoring and management tool designed for Citrix Virtual Apps and Desktops. It provides administrators with daily performance insights, including logon times, session usage, resource utilization, and alerts, making it the correct tool for overall site performance monitoring.

### NEW QUESTION # 62

Scenario: A Citrix Administrator is investigating an instability in the system that is causing the Print Spooler service to stop frequently on the Virtual Delivery Agent (VDA) machine. The administrator finds printer driver conflicts in the environment and needs to remove the problem drivers while still maintaining printing functionality. Which policy setting can the administrator use to resolve this issue on the VDA machine?

- A. Auto-create all client printers
- B. Use only printer model specific drivers

- C. Automatic installation of in-box printer drivers
- **D. Use universal printing only**

**Answer: D**

Explanation:

By enabling the "Use universal printing only" policy, the VDA will rely exclusively on the Citrix Universal Print Driver instead of loading multiple printer model-specific drivers. This resolves driver conflicts, stabilizes the Print Spooler service, and maintains printing functionality.
