

# Get CrowdStrike CCCS-203b Exam Questions with High Probability in PDF

As we all know, HR form many companies hold the view that candidates who own a CCCS-203b professional certification are preferred, because they are more likely to solve potential problems during work. And the CCCS-203b certification vividly demonstrates the fact that they are better learners. As for candidates who possessed with a CCCS-203b professional certification are more competitive. The current word is a stage of science and technology, social media and social networking has already become a popular means of CCCS-203b Exam Materials. As a result, more and more people study or prepare for exam through social networking. By this way, our CCCS-203b learning guide can be your best learn partner.

If you are determined to purchase our CCCS-203b valid exam collection materials for your companies, if you pursue long-term cooperation with site, we will have some relate policy. Firstly we provide one-year service warranty for every buyer who purchased CCCS-203b valid exam collection materials. Every buyer can share one year free updates and preparation assist. Secondly if you want to get the free updates not just for one year, you want to still get the new version of CrowdStrike CCCS-203b valid exam collection materials after one year, you share 50% discount for the second year.

## The Top Features of CrowdStrike CCCS-203b PDF Dumps File and Practice Test Software

How to get the test CCCS-203b certification in a short time, which determines enough qualification certificates to test our learning ability and application level. This may be a contradiction of the problem, we hope to be able to spend less time and energy to take into account the test CCCS-203b Certification, but the qualification examination of the learning process is very wasted energy, so how to achieve the balance? Our CCCS-203b exam prep can be done with its high-efficient merit. Try it now!

## CrowdStrike Certified Cloud Specialist - 2025 Version Sample Questions (Q296-Q301):

### NEW QUESTION # 296

Which action should an administrator take after identifying privileged accounts without MFA using the CrowdStrike Identity

Analyzer?

- A. Manually change the passwords of all identified accounts.
- B. Revoke all privileges from the affected accounts immediately.
- **C. Apply conditional access policies to enforce MFA for the accounts.**
- D. Disable the accounts permanently to prevent unauthorized access.

**Answer: C**

Explanation:

Option A: Enforcing MFA through conditional access policies ensures that privileged accounts remain secure without disrupting legitimate operations. This approach addresses the identified risk directly and aligns with best practices.

Option B: Changing passwords can enhance security but does not address the lack of MFA, leaving the accounts still vulnerable to unauthorized access. This action alone is not comprehensive.

Option C: While revoking privileges could mitigate risks, it is often too disruptive and impractical for operational accounts or critical users. Instead, enforcing MFA is a more balanced and effective solution.

Option D: Permanent account disabling is unnecessary and counterproductive unless there is clear evidence of a security breach. This approach does not address the root cause of missing MFA.

### NEW QUESTION # 297

Which feature of the CrowdStrike Identity Analyzer enables administrators to determine the last time a specific user changed their password across the cloud infrastructure?

- A. Password Policy Manager
- B. Identity Change Log
- **C. Last Password Change Tracker**
- D. Access Key Analyzer

**Answer: C**

Explanation:

Option A: The Last Password Change Tracker is explicitly designed to show the most recent password change for individual users. It is the tool best suited for the given use case in the CrowdStrike Identity Analyzer.

Option B: The Password Policy Manager helps enforce and manage password policies, such as complexity requirements and expiration intervals. However, it does not provide insights into individual user password changes. This answer may confuse those who associate policy enforcement with change tracking.

Option C: While the Identity Change Log records various changes related to identities, such as group membership or policy updates, it does not specifically track the last password change. This feature focuses more on auditing overall identity changes rather than specific user password updates.

Option D: This tool focuses on tracking and analyzing the usage of API keys and access tokens, not user password changes. It is unrelated to password change monitoring.

### NEW QUESTION # 298

You are tasked with assigning policies in a cloud environment using CrowdStrike's Identity Analyzer. Which of the following configurations aligns best with the principle of least privilege?

- A. Assigning a single, broad policy to grant all users access to all cloud services.
- B. Granting unrestricted administrative privileges to all roles to ensure productivity.
- **C. Creating role-based policies that restrict access to only the services and actions necessary for specific job functions.**
- D. Assigning identical policies to all users regardless of their roles or responsibilities.

**Answer: C**

Explanation:

Option A: A one-size-fits-all approach ignores the unique requirements of different roles and leads to over-permissioning or under-permissioning, both of which are undesirable from a security perspective.

Option B: Granting administrative privileges universally undermines security and increases the likelihood of human error or exploitation. Only specific roles requiring administrative capabilities should have such access.

Option C: Broad policies that grant universal access violate the principle of least privilege. They expose the environment to

unnecessary risks, such as unauthorized data access or resource modification.

Option D: This approach follows the principle of least privilege, ensuring users and roles have access only to the resources and actions required for their responsibilities. This minimizes the attack surface, reduces the risk of accidental or malicious misuse, and adheres to best practices in identity and access management.

### NEW QUESTION # 299

Your organization has configured a CIEM policy to grant access to a serverless compute service for users in the "DevOps" role. However, some users in this role report that they cannot access the service. What is the most likely reason for this issue, and how can it be resolved?

- A. The CIEM policy is not mapped to the appropriate cloud region for the serverless compute service.
- B. The users have not been manually added to the "DevOps" role in the cloud provider's IAM system.
- C. The cloud provider's native IAM policies are overriding the CIEM policy.
- D. The policy does not include a condition to explicitly allow access to the serverless compute service.

**Answer: A**

Explanation:

Option A: CIEM policies typically grant access by default unless explicitly restricted. The lack of a specific "allow" condition is unlikely to be the issue unless the policy is overly restrictive.

Option B: CIEM manages entitlements at the group or role level, so manual addition of users to roles within the cloud provider's IAM system is not necessary if CIEM is configured correctly.

Option C: CIEM policies are designed to work in conjunction with cloud provider IAM policies.

Overrides could occur, but CIEM generally provides visibility into such conflicts, and misconfiguration is more likely.

Option D: CIEM policies often need to be configured with specific regions in mind, especially for services like serverless compute that are region-dependent. Failing to map the policy to the appropriate region will prevent users from accessing the service.

### NEW QUESTION # 300

A customer is attempting to register an Azure cloud account in CrowdStrike Falcon, but the registration fails with an error: 1. "App registration not found." What is the most likely issue causing this error?

- A. The Azure tenant is not using default security settings.
- B. The CrowdStrike Falcon license does not include Azure integration.
- C. The Azure Active Directory application registration has not been created or configured.
- D. The customer is using an outdated version of the CrowdStrike Falcon console.

**Answer: C**

Explanation:

Option A: CrowdStrike registration does not require Azure tenants to use default security settings.

Security settings can influence permissions, but the error in question is specific to the application registration process.

Option B: While licensing can limit certain functionalities, it does not directly cause the "App registration not found" error. Licensing issues are usually flagged in the CrowdStrike console or during setup.

Option C: The version of the console does not impact the ability to register a cloud account.

Console updates usually address feature enhancements or bug fixes, not core registration functionality.

Option D: This is the correct answer because the error specifically points to a missing or misconfigured Azure Active Directory application registration. CrowdStrike requires an application registration in Azure AD to authenticate and access resources in the customer's Azure environment. If this step is missed or done incorrectly, the registration will fail.

### NEW QUESTION # 301

.....

Are you an exam jittering? Are you like a cat on hot bricks before your driving test? Do you have put a test anxiety disorder? If your answer is yes, we think that it is high time for you to use our CCCS-203b Exam Question. Our study materials have confidence to help you pass exam successfully and get related certification that you long for, and we can guarantee that if you don't pass the exam, we will give you full refund.
