The staffs of our Data-Architect training materials are all professionally trained. If you have encountered some problems in using our products, you can always seek our help. Our staff will guide you professionally. If you are experiencing a technical problem on the system, the staff at Data-Architect Practice Guide will also perform one-on-one services for you. And we work 24/7 online so that you can contact with us at anytime no matter online or via email on the questions of the Data-Architect exam questions.

Salesforce Certified Data Architect exam covers a wide range of topics, including data modeling, data migration, data integration, data analysis, and data governance. It is designed to test the candidate's ability to design and implement complex data architectures that meet the needs of a business. Data-Architect Exam consists of multiple-choice questions and scenario-based questions that require the candidate to analyze a given situation and provide the best possible solution.

Salesforce Data-Architect Certification Exam is a rigorous and challenging exam that requires extensive preparation and knowledge of Salesforce data architecture. Successful candidates will have demonstrated their expertise in designing and implementing data solutions on the Salesforce platform. Salesforce Certified Data Architect certification is a valuable asset for individuals seeking career advancement in the field of Salesforce data architecture and management. It is also a key differentiator for organizations looking to hire Salesforce professionals with advanced skills in data management and architecture.

## Best Data-Architect Practice & Exam Data-Architect Review

Salesforce Certified Data Architect has introduced practice test (desktop and web-based) for the students so they can practice anytime in an easy way. The Salesforce Certified Data Architect (Data-Architect) practice tests are customizable which means the students can set the time and questions according to their needs. The Data-Architect Practice Tests have unlimited tries so that the users don't make extra mistakes when giving it the next time. Candidates can access the previously given tries from the history and avoid making mistakes in the final examination.

Salesforce Data-Architect Certification Exam is a rigorous test that requires a deep understanding of Salesforce data architecture concepts, best practices, and implementation strategies. Data-Architect exam is designed to test the candidate's knowledge of how to design, implement, and manage complex data architectures within the Salesforce platform. Data-Architect Exam covers topics such as data modeling, data integration, data migration, data governance, and data security.

## Salesforce Certified Data Architect Sample Questions (Q16-Q21):

### NEW QUESTION # 16

To address different compliance requirements, such as general data protection regulation (GDPR), personally identifiable information (PII), of health insurance Portability and Accountability Act (HIPPA) and others, a SF customer decided to categorize each data element in SF with the following:

Data owner

Security Level, such as confidential

Compliance types such as GDPR, PII, HIPPA

A compliance audit would require SF admins to generate reports to manage compliance.

What should a data architect recommend to address this requirement?

- A. Use metadata API, to extract field attribute information and use the extract to classify and build reports
- B. Create a custom object and field to capture necessary compliance information and build custom reports.
- C. Build reports for field information, then export the information to classify and report for Audits.
- **D. Use field metadata attributes for compliance categorization, data owner, and data sensitivity level.**

**Answer: D**

Explanation:

The data architect should recommend using field metadata attributes for compliance categorization, data owner, and data sensitivity level. This will allow the SF admins to generate reports to manage compliance based on the field metadata attributes that are defined for each data element in SF. Option A is incorrect because using metadata API to extract field attribute information and use the extract to classify and build reports will require additional development effort and may not be up-to-date with the latest changes in SF.

Option C is incorrect because creating a custom object and field to capture necessary compliance information and build custom reports will require additional configuration effort and may not be consistent with the actual data elements in SF. Option D is incorrect because building reports for field information, then exporting the information to classify and report for audits will require additional manual effort and may not be accurate or timely.

#### NEW QUESTION # 17

Universal Containers has a large volume of Contact data going into Salesforce.com. There are 100,000 existing contact records. 200,000 new contacts will be loaded. The Contact object has an external ID field that is unique and must be populated for all existing records. What should the architect recommend to reduce data load processing time?

- A. Load all records via the Upsert operation to determine new records vs. existing records.
- B. Load Contact records together using the Streaming API via the Upsert operation.
- C. Delete all existing records, and then load all records together via the Insert operation.
- **D. Load new records via the Insert operation and existing records via the Update operation.**

**Answer: D**

Explanation:

Loading new records via the Insert operation and existing records via the Update operation will allow using the external ID field as a unique identifier and avoid any duplication or overwriting of records. This is faster and safer than deleting all existing records or using the Upsert operation, which might cause conflicts or errors .

#### NEW QUESTION # 18

Ursa Major Solar has defined a new Data Quality Plan for their Salesforce data.

Which two approaches should an Architect recommend to enforce the plan throughout the organization? (Choose two.)

- **A. Enforce critical business processes by using Workflow, Validation Rules, and Apex code.**
- B. Ensure all data is stored in an external system and set up an integration to Salesforce for view-only access.
- **C. Schedule a weekly dashboard displaying records that are missing information to be sent to managers for review.**
- D. Schedule reports that will automatically catch duplicates and merge or delete the records every week.

**Answer: A,C**

#### NEW QUESTION # 19

The data architect for UC has written a SOQL query that will return all records from the Task object that do not have a value in the WhatId field:

Select id, description, Subject from Task where WhatId != NULL

When the data architect usages the query to select values for a process a time out error occurs.

What does the data architect need to change to make this query more performant?

- A. Remove description from the requested field set.
- B. Change query to SOSL. ??
- **C. Change the where clause to filter by a deterministic defined value.**
- D. Add limit 100 to the query.

**Answer: C**

#### NEW QUESTION # 20

Universal Containers (UC) provides shipping services to its customers. They use Opportunities to track customer shipments. At any given time, shipping status can be one of the 10 values. UC has 200,000 Opportunity records. When creating a new field to track shipping status on opportunity, what should the architect do to improve data quality and avoid data skew?

- A. Create a Lookup to custom object ShippingStatus c.
- B. Create a text field and make it an external ID.
- **C. Create a picklist field, values sorted alphabetically.**
- D. Create a Master -Detail to custom object ShippingStatus c.

**Answer: C**

#### NEW QUESTION # 21
