Test XSOAR-Engineer Simulator Online, Reliable XSOAR-Engineer Exam Guide

With Pass4cram's help, you do not need to spend a lot of money to participate in related cram or spend a lot of time and effort to

review the relevant knowledge, but can easily pass the exam. Simulation test software of Palo Alto Networks XSOAR-Engineer Exam is developed by Pass4cram's research of previous real exams. Pass4cram's Palo Alto Networks XSOAR-Engineer exam practice questions have a lot of similarities with the real exam practice questions.

Palo Alto Networks XSOAR Engineer Sample Questions (Q94-Q99):

NEW QUESTION # 94

Inside the Incidents table view, which actions can be performed on the selected incidents? (Choose two.)

- A. Run Command, Export, and Close and Delete for all selected incidents regardless of their status
- B. Run Command for all selected incidents having Active status
- C. Assign, Edit, and Mark as Duplicate for all selected incidents regardless of their status
- D. Export incidents as JSON and change incident status

Answer: A,C

NEW QUESTION # 95

A SOC team must send a notification email to specific teams based on the severity of an incident. Which feature will accomplish this task each time the severity escalates?.

- A. Server config.
- B. Field-change trigger script.
- C. SLA script.
- D. Post-processing rule.

Answer: B

Explanation:

The XSOAR Admin Guide specifies that field-change trigger scripts allow automations to run whenever a designated incident field changes. Severity is a standard incident field, and when its value increases due to analyst action, a playbook, enrichment script, or correlation event, a field-change trigger can automatically run a script to notify teams.

Post-processing rules only run after an incident closes, making them unsuitable for real-time severity escalation alerts. SLA scripts respond to timer conditions, not field changes, and are used for SLA violations or deadline tracking. Server configuration does not provide automation behavior tied to field modifications.

Field-change triggers are explicitly documented as the mechanism to automate workflows for "reacting to changes in incident fields such as owner, severity, status, or custom fields." When severity is updated, XSOAR evaluates matching triggers and runs the associated automation immediately.

Thus, only a field-change trigger script can reliably detect a severity escalation and execute a notification action the moment the field changes, making option C the correct and documented solution.

NEW QUESTION # 96

Match the corresponding action with the appropriate playbook tasks.

Answer Area

Standard Task	Drag answer here	Executes the IPReputation Command
Conditional Task	Drag answer here	Checks if an integration exists
Section Header Task	Drag answer here	Sends a survey to the access team for reviewing a specific user
Data Collection Task	Drag answer here	Acts as a label for organizing playbook structure

Answer:

Explanation:

Standard Task	Executes the IPReputation Command	Executes the IPReputation Command
Conditional Task	Checks if an integration exists	Checks if an integration exists
Section Header Task	Acts as a label for organizing playbook structure	Sends a survey to the access team for reviewing a specific user
Data Collection Task	Sends a survey to the access team for reviewing a specific user	Acts as a label for organizing playbook structure

Answer Area

Standard Task	Executes the IPReputation Command	Executes the IPReputation Command
Conditional Task	Checks if an integration exists	Checks if an integration exists
Section Header Task	Acts as a label for organizing playbook structure	Sends a survey to the access team for reviewing a specific user
Data Collection Task	Sends a survey to the access team for reviewing a specific user	Acts as a label for organizing playbook structure

NEW QUESTION # 97

Which two solutions are available to scale an overloaded XSOAR environment? (Choose two.)

- A. Add a distributed database server
- B. Add a live backup server (disaster recovery)
- C. Add an indexing server
- D. Add an engine

Answer: A,B

NEW QUESTION # 98

An XSOAR engineer has been tasked with exporting all indicators from the production environment in the last 90 days. The final report needs to be in CSV format containing all indicator fields. How can this task be achieved?

- A. In the Threat Intel page, add query `firstSeen:>='90 days ago'`, select All columns in Table View, and click Export to export as a CSV.
- B. Run the command `!findIndicators` in CLI with the query `firstSeen:>='90 days ago'` and export to CSV.
- C. Run the command `!GetIndicatorsByQuery` in CLI with its default arguments and export all indicators in the last 90 days.
- D. SSH into the server and copy the indicator's database.

Answer: A

NEW QUESTION # 99

.....

We all realize that how important an Security Operations certification is, also understand the importance of having a good knowledge of it. Passing the XSOAR-Engineer exam means you might get the chance of higher salary, greater social state and satisfying promotion chance. Once your professional ability is acknowledged by authority, you master the rapidly developing information technology. With so many advantages, why don't you choose our reliable XSOAR-Engineer Actual Exam guide, for broader future and better life? Our XSOAR-Engineer exam questions won't let you down.
