Valid Plat-Admn-301 Exam Dumps - Plat-Admn-301 Reliable Test Braindumps

If you have PracticeDump Plat-Admn-301 Exam Questions, you don't need a person to help you with reading and explaining the facts. This Salesforce Plat-Admn-301 exam questions material is available in pdf so that anyone can study it without any difficulty. On the other hand, to understand real exam's format, you can easily take PracticeDump Plat-Admn-301 Practice Exams. These Salesforce Certified Platform Administrator II (Plat-Admn-301) practice tests help you know how much you can score and if is it the right time to apply for the Salesforce Certified Platform Administrator II (Plat-Admn-301) certification exam or if you should wait for a little.

Salesforce Certified Platform Administrator II Sample Questions (Q64-Q69):

NEW QUESTION # 64

A new administrator at Cloud Kicks has reported that they are unable to use outbound change sets as requested. What permission should be reviewed to determine if it is missing from the administrator user or profile?

- A. Deploy Change Sets
- B. Modify Metadata Through Metadata API Functions
- C. Create and Upload Change Sets
- D. API Enabled

Answer: C

Explanation:

To use outbound change sets, a user needs to have the Create and Upload Change Sets permission on their profile or permission set. This permission allows users to create change sets in a sandbox or Developer Edition organization and upload them to another organization. References: https://help.salesforce.com/s/articleView?id=sf.changesets_create_upload_perm.htm&type=5

NEW QUESTION # 65

Northern Trail Outfitters (NTO) has a private sharing model for records containing a customer's credit information. These records should be visible to a sales rep's manager but hidden from their colleagues.

How should an administrator adjust NTO's sharing model to ensure the correct amount of confidentiality?

- A. Grant access using hierarchies via the sharing settings.
- **B. Create sharing rules for each manager based on the record owner.**
- C. Use validation rules targeting the logged-in user.
- D. Add View All access for the object via the managers profile.

Answer: B

Explanation:

To ensure that sales reps' managers can view records containing customer's credit information but their colleagues cannot, NTO should grant access using hierarchies via the sharing settings. This option allows users above another user in the role hierarchy to have access to records owned by or shared with users below them in the hierarchy. References: https://help.salesforce.com/s/articleView?id=sf.admin_sharing.htm&type=5

NEW QUESTION # 66

The finance director at Cloud Kicks asks the administrator for an exception report that shows all B2C accounts that are missing the credit card number. The credit card number is a classic encrypted field.

What action should the administrator take to meet this requirement?

- A. Build a custom checkbox called 'Has Credit Card' that Finance checks when a credit card is recorded and a tabular report filtered on the checkbox equal to false.
- **B. Create a summary report that includes a cross-filter to the Account object with a sub-filter for credit card number equal to null.**
- C. Unmask the encrypted credit card number field to make it available and add a custom filter to a report where credit card number is blank.
- D. Add 'View Encrypted Fields' to a permission set assigned to Finance and system administrators and a summary report filtered by credit card number.

Answer: B

Explanation:

A summary report with a cross-filter is a type of report that allows you to summarize data by grouping rows and columns and applying filters based on related objects and fields. A cross-filter is a filter that lets you include or exclude records in your report based on related objects and their fields. In this case, you can create a summary report that includes a cross-filter to the Account object with a sub-filter for credit card number equal to null. This will show you all B2C accounts that are missing the credit card number, regardless of whether it is encrypted or not. References: https://help.salesforce.com/s/articleView?id=sf.reports_summary_charts.htm&type=5 https://help.salesforce.com/s/articleView?id=sf.reports_cross_filters.htm&type=5

NEW QUESTION # 67

Cloud Kicks has Service and Sales Manager roles that need to be able to see all Accounts. Currently, they each have their own custom profile. The organization-wide defaults are set to Private and a sharing rule share access to Accounts to the sales and service teams based on criteria.

What should the administrator do to allow the service and sales Manager to see all Accounts?

- A. Set the organization-wide default for Accounts to Public Read Only.

- B. Move the Service and Sales Managers higher in the role hierarchy.
- C. Configure a custom profile for each manager that gives them view All on Accounts.
- D. Create a permission set with view All to Accounts and assign it to the Service and Sales Managers.

Answer: D

Explanation:

A permission set is a collection of settings and permissions that can extend users' functional access without changing their profiles. By creating a permission set with view All on Accounts and assigning it to the service and sales managers, an administrator can grant them access to all account records in their org without modifying their existing profiles. NEW QUESTION # 68

DreamHouse Realty wants to notify an assigned agent when an appointment is booked on a custom object for one of their listed homes along with the total number of appointments booked so far. The administrator has configured a Roll-up Summary for the number of appointments as well as a flow to detect the creation of a new appointment and send the information to the agent. What consideration about process automation should the administrator be aware of to ensure the right information is delivered?

- A. Roll-up Summary calculations run after processes and workflows.
- B. Roll-up Summary calculations will prevent a flow from being triggered.
- C. Flows can only be triggered from the records created on standard objects.
- D. Only standard objects can be used with Roll-up Summary fields.

Answer: A

Explanation:

Roll-up Summary calculations are performed after processes and workflows are executed, which means that any changes made by processes or workflows will not be reflected in the roll-up summary field until after the transaction is committed. This could cause inaccurate or outdated information to be delivered to the agent if the flow relies on the roll-up summary field value.

NEW QUESTION # 69

.....

Are you still feeling distressed for expensive learning materials? Are you still struggling with complicated and difficult explanations in textbooks? Do you still hesitate in numerous tutorial materials? Plat-Admn-301 study guide can help you to solve all these questions.
