## AZ-120 New Dumps Free | AZ-120 Latest Test Format

To be successful in your social life and own a high social status you must own good abilities in some area and plenty of knowledge. Passing the test AZ-120 exam can make you achieve those goals and prove that you are competent. Buying our AZ-120 practice test can help you pass the AZ-120 Exam fluently and the learning costs you little time and energy. The questions and answers of our AZ-120 test question are chosen elaborately and to simplify the important information to make your learning relaxing and efficient.

## Microsoft Planning and Administering Microsoft Azure for SAP Workloads Sample Questions (Q79-Q84):

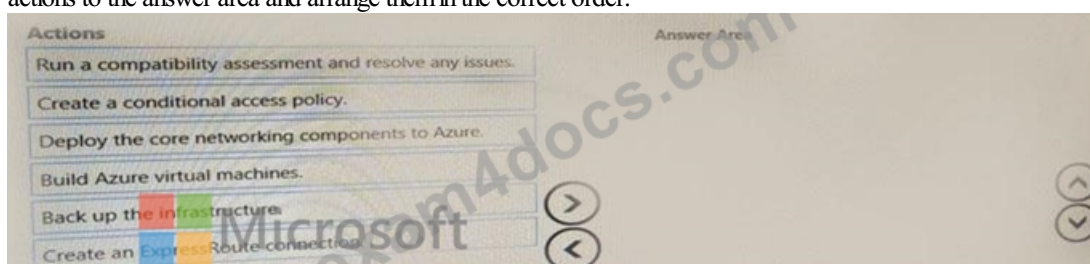

### NEW QUESTION # 79

A customer has an on-premises SAP environment.

The customer plans to migrate SAP to Azure.

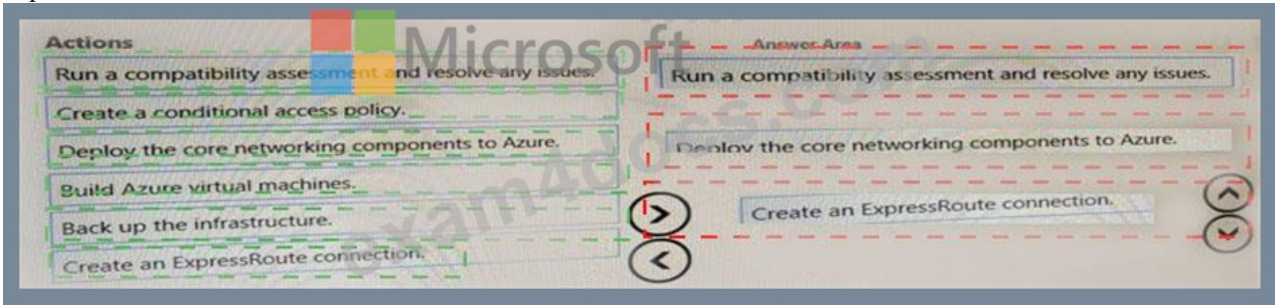

You need to prepare the environment for the planned migration.

Which three actions should you perform in sequence before the migration? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

**Answer:**

**Explanation:**

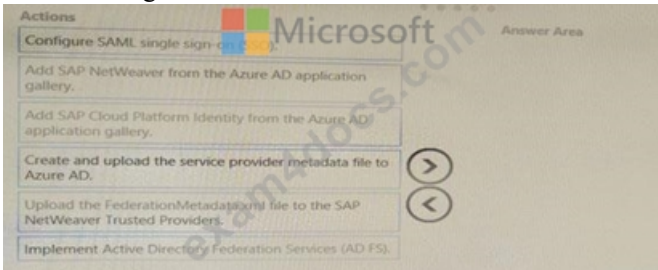

**NEW QUESTION # 80**

You deploy an SAP environment on Azure.

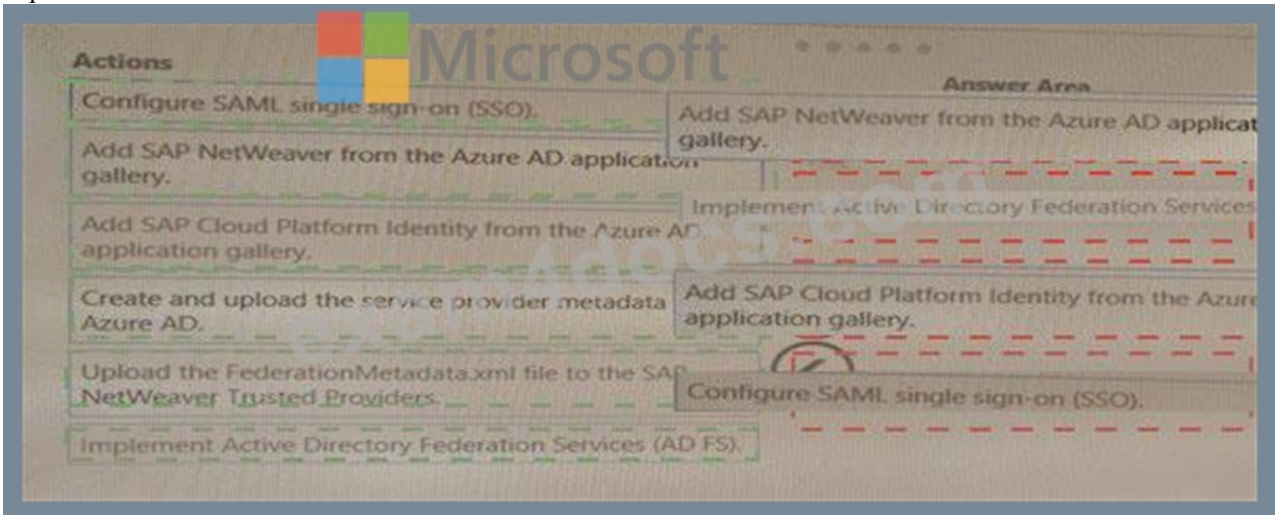

You need to configure SAP NetWeaver to authenticate by using Azure Active Directory (Azure AD).

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

**Answer:**

**Explanation:**

**NEW QUESTION # 81**

You have an on-premises SAP environment that runs on SUSE Linux Enterprise Server (SLES) servers and Oracle. The version of the SAP ERP system is 6.06 and the version of the portal is SAP NetWeaver 7.3.

You need to recommend a migration strategy to migrate the SAP ERP system and the portal to Azure. The solution must be hosted on SAP HANA.

What should you recommend? To answer, drag the appropriate tools to the correct components. Each tool may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

**Tools**

- SAP heterogeneous system copy
- Software Update Manager (SUM) Database Migration Option (DMO) with System Update
- Software Update Manager (SUM) Database Migration Option (DMO) with System Move
- Software Update Manager (SUM) Database Migration Option (DMO) without System Update

**Answer Area**

To migrate the SAP ERP system:

To migrate the portal:

**Answer:**

Explanation:

**Tools**

- SAP heterogeneous system copy
- Software Update Manager (SUM) Database Migration Option (DMO) with System Update
- Software Update Manager (SUM) Database Migration Option (DMO) with System Move
- Software Update Manager (SUM) Database Migration Option (DMO) without System Update

**Answer Area**

To migrate the SAP ERP system:

To migrate the portal:

Explanation

- 1) SUM+DMO+System update.
- 2) Heterogeneous system copy.

<https://blogs.sap.com/2017/10/05/your-sap-on-azure-part-2-dmo-with-system-move/>

**NEW QUESTION # 82**

You have an on-premises SAP HANA deployment.

You plan to migrate the deployment to Azure virtual machines. The migrated deployment will use Azure Premium Storage VI SSD for the volume that will host /hana/data and Azure ultra disks for the volume that will host /hana/logs.

You need to recommend the cache configuration for each volume.

What should you recommend for each volume? To answer, select the appropriate options in the answer area.

NOTE Each correct selection is worth one point.

**Answer Area**

**Microsoft**

/hana/data:

/hana/log:

**Answer:**

Explanation:

Answer Area

Answer Area

**NEW QUESTION # 83**

You plan to migrate an on-premises SAP environment to Azure.

You need to identify whether any SAP application servers host multiple SAP system identifiers (SIDs).

What should you do?

- A. From the SAP EarlyWatch Alert report, compare the services to the reference objects
- **B. Run the SAP Report from ABAPMeter.**
- C. From the SAP EarlyWatch Alert report, compare the physical host names to the virtual host names.
- D. Run SAP HANA A sizing report.

**Answer: B**

Explanation:

Topic 1, Contoso Ltd

Existing Environment

Active Directory

The network contains an on-premises Active Directory domain named ad.contoso.com. User email addresses use a domain name of contoso.com.

SAP Environment

The current SAP environment contains the following components:

SAP Solution Manager

SAP ERP Central Component (SAP ECC)

SAP Supply Chain Management (SAP SCM)

SAP application servers that run Windows Server 2008 R2

SAP HANA database servers that run SUSE Linux Enterprise Server 12 (SLES 12) Problem Statements Contoso identifies the following issues in its current environment:

The SAP HANA environment lacks adequate resources.

The Windows servers are nearing the end of support.

The datacenters are at maximum capacity.

Requirements

Planned Changes

Contoso identifies the following planned changes:

Deploy Azure Virtual WAN.

Migrate the application servers to Windows Server 2016.

Deploy ExpressRoute connections to all of the offices and manufacturing facilities.

Deploy SAP landscapes to Azure for development, quality assurance, and production.

All resources for the production landscape will be in a resource group named SAPProduction.

Business goals

Contoso identifies the following business goals:

Minimize costs whenever possible.

Migrate SAP to Azure without causing downtime.

Ensure that all SAP deployments to Azure are supported by SAP.

Ensure that all the production databases can withstand the failure of an Azure region.

Ensure that all the production application servers can restore daily backups from the last 21 days.

Technical Requirements

Contoso identifies the following technical requirements:

Inspect all web queries.

Deploy an SAP HANA cluster to two datacenters.

Minimize the bandwidth used for database synchronization.

Use Active Directory accounts to administer Azure resources.

Ensure that each production application server has four 1-TB data disks.

Ensure that an application server can be restored from a backup created during the last five days within 15 minutes.

Implement an approval process to ensure that an SAP administrator is notified before another administrator attempts to make changes to the Azure virtual machines that host SAP.

It is estimated that during the migration, the bandwidth required between Azure and the New York office will be 1 Gbps. After the migration, a traffic burst of up to 3 Gbps will occur.

Proposed Backup Policy

An Azure administrator proposes the backup policy shown in the following exhibit.

\* Policy name ⓘ  
 ✓

**Backup schedule**

\* Frequency      \* Time      \* Timezone  
           

**Instant Restore ⓘ**

---

Retain instant recovery snapshot(s) for  
 ✓ Day(s)

**Retention range**

Retention of daily backup point.

\* At      For  
       ✓ Day(s)

---

Retention of weekly backup point.

\* On      \* At      For  
             ✓ Week(s)

---

Retention of monthly backup point.

\* On      \* Day      \* At      For  
                   ✓ Month(s)

---

Retention of yearly backup point.

\* In      \* On      \* Day      \* At      For  
                         ✓ Year(s)

**Azure Resource Manager Template**

An Azure administrator provides you with the Azure Resource Manager template that will be used to provision the production application servers.

```

{
  "apiVersion": "2017-03-30",
