These two characteristics determine that almost all of the candidates who use Identity-and-Access-Management-Architect guide torrent can pass the test at one time. This is not self-determination.

Salesforce Certified Identity and Access Management Architect Sample Questions (Q72-Q77):

NEW QUESTION # 72
Universal containers (UC) has implemented ansp-Initiated SAML flow between an external IDP and salesforce. A user at UC is attempting to login to salesforce1 for the first time and is being prompted for salesforce credentials instead of being shown the IDP login page. What is the likely cause of the issue?

- A. The "Redirect to Identity Provider" option has been selected in the my domain configuration.
- B. The user has not configured the salesforce1 mobile app to use my domain for login
- C. The "Redirect to identity provider" option has not been selected the SAML configuration.
- D. The user has not been granted the "Enable single Sign-on" permission

Answer: B

Explanation:
Explanation
B is correct because the user has not configured the Salesforce1 mobile app to use My Domain for login, which is the likely cause of the issue. The My Domain URL is used to redirect the user to the identity provider's login page and initiate the SP-Initiated SAML flow. If the user does not configure the Salesforce1 mobile app to use My Domain for login, they will be prompted for Salesforce credentials instead of being shown the IDP login page. A is incorrect because the "Redirect to Identity Provider" option has been selected in the My Domain configuration, which is not the cause of the issue. The "Redirect to Identity Provider" option determines whether users are redirected to the identity provider's login page automatically or after clicking a button. C is incorrect because the "Redirect to Identity Provider" option has not been selected in the SAML configuration, which is not the cause of the issue. The "Redirect to Identity Provider" option determines whether users are redirected to the identity provider's login page automatically or after clicking a button. D is incorrect because the user has been granted the "Enable Single Sign-On" permission, which is not the cause of the issue. The "Enable Single Sign-On" permission allows users to use SSO with connected apps or external systems.

NEW QUESTION # 73
Universal Containers is budding a web application that will connect with the Salesforce API using JWT OAuth Flow.
Which two settings need to be configured in the connect app to support this requirement?
Choose 2 answers

- A. The "api" OAuth scope in the connected app.
- B. The "edair_api" OAuth scope m the connected app.
- C. The Use Digital Signature option in the connected app.
- D. The "web" OAuth scope in the connected app,

Answer: A,C

NEW QUESTION # 74
Universal Containers (UC) has a strict requirement to authenticate users to Salesforce using their mainframe credentials. The mainframe user store cannot be accessed from a SAML provider. UC would also like to have users in Salesforce created on the fly if they provide accurate mainframe credentials.
How can the Architect meet these requirements?

- A. Implement OAuth User-Agent Flow on the mainframe; use a Registration Handler to create the user on the fly.
- B. Use the SOAP API to create the user when created on the mainframe; implement Delegated Authentication.
- C. Implement Just-In-Time Provisioning on the mainframe to create the user on the fly.
- D. Use a Salesforce Login Flow to call out to a web service and create the user on the fly.

Answer: C

NEW QUESTION # 75
Northern Trail Outfitters (NTO) utilizes a third-party cloud solution for an employee portal. NTO also owns Salesforce Service Cloud and would like employees to be able to login to Salesforce with their third-party portal credentials for a seamless experience. The third-party employee portal only supports OAuth.
What should an identity architect recommend to enable single sign-on (SSO) between the portal and Salesforce?

- A. Configure Salesforce for Delegated Authentication.
- B. Configure SSO to use the third-party portal as an identity provider.
- C. Create a custom external authentication provider.
- D. Add the third-party portal as a connected app.

Answer: B

Explanation:
Explanation
Configuring SSO to use the third-party portal as an identity provider is the best option to enable SSO between the portal and Salesforce. The portal can use OAuth as the protocol to authenticate users and redirect them to Salesforce. The other options are either not feasible or not relevant for this use case. NEW QUESTION # 76
Under which scenario Web Server flow will be used?

- A. Used for mobile applications and testing legacy Integrations.
- B. Used for server-side components when page needs to be rendered.
- C. Used for web applications when server-side code needs to interact with APIS.
- D. Used for verifying Access protected resources.

Answer: C
