## Valid HP HPE7-A01 New Dumps - HPE7-A01 Free Download

You must be attracted by the APP online version of our HPE7-A01 exam questions, which is unlike other exam materials that are available on the market, study torrent specially proposed different version to allow you to learn not on paper, but to use on all kinds of electronic devices such as IPAD, mobile phones or laptop to learn. This greatly improves the students' availability of fragmented time. You can also have a quite enjoyable experience with APP online version of our HPE7-A01 Study Materials. Just have a try on this version of our HPE7-A01 learning guide!

The HP HPE7-A01 Exam is targeted to professionals who work in the IT industry as network engineers, system integrators, security professionals or network administrators. The HPE7-A01 Aruba Certified Campus Access Professional certification is beneficial for professionals who want to enhance their career in the field of wireless networking. It helps them to learn new skills and upgrade their knowledge to keep up with the ever-evolving technological advancements in the industry.

## HP Aruba Certified Campus Access Professional Exam Sample Questions (Q114-Q119):

### NEW QUESTION # 114

A customer is using stacked Aruba CX 6200 and CX 6300 switches for access and a VSX pair of Aruba CX 8325 as a collapsed core. 802.1X is implemented for authentication. Due to the lack of cabling, some unmanaged switches are still in use. Sometimes devices behind these switches cause network outages. The switch should send a warning to the helpdesk when the problem occurs. You have been asked to implement an effective solution to the problem.

What is the solution for this?

- A. Configure spanning tree on the Aruba CX 6200 and CX 6300 switches No trap option is needed
- **B. Configure loop protection on all edge ports of the Aruba CX 6200 and CX 6300 switches Set up the trap-option**
- C. Configure spanning tree on the Aruba CX 8325 switches Set the trap-option
- D. Configure loop protection on all edge ports of the Aruba CX 6200 and CX 6300 switches No trap option is needed

**Answer: B**

Explanation:

This is the correct solution to the problem of devices behind unmanaged switches causing network outages due to loops. Loop protection is a feature that allows an Aruba CX switch to detect and prevent loops by sending loop protection packets on each port, LAG, or VLAN on which loop protection is enabled. If a loop protection packet is received by the same switch that sent it, it indicates a loop exists and an action is taken based on the configuration. Loop protection should be configured on all edge ports of the Aruba CX 6200 and CX 6300 switches, which are the ports that connect to end devices or unmanaged switches. The trap-option should be set up to send a warning to the helpdesk when a loop is detected. The other options are incorrect because they either do not configure loop protection or do not set up the trap-option.

### NEW QUESTION # 115

What is an OSPF transit network?

- A. a network that connects to a different routing protocol
- B. a network that uses tunnels to connect two areas
- **C. a special network that connects two different areas**
- D. a network on which a router discovers at least one neighbor

**Answer: C**

Explanation:

OSPF is a link-state routing protocol that divides a network into areas. An area is a logical grouping of routers that share the same link-state information. Area 0 is the backbone area that connects all other areas. A transit network is a special network that connects two different areas.

A transit network must belong to Area 0 and have at least two OSPF routers attached to it. A transit network allows traffic from one area to pass through another area without changing the area ID.

### NEW QUESTION # 116

Drag and Drop Question

What is the order of operations for Key Management service for a wireless client roaming from AP1 to AP2?

Operation	Order
Cache the client's information	
Client associates and authenticates to AP1	
Generate Pairwise Master Key keys for AP1's neighbors	
Get AP1 neighbor AP list	
Share Pairwise Master Key along with VLAN and User Role to target APs	

**Answer:**

Explanation:

Operation	Order
	Client associates and authenticates to AP1
	Cache the client's information
	Generate Pairwise Master Key keys for AP1's neighbors
	Get AP1 neighbor AP list
	Share Pairwise Master Key along with VLAN and User Role to target APs

### NEW QUESTION # 117

The administrator notices that wired guest users that have exceeded their bandwidth limit are not being disconnected Access Tracker in ClearPass indicates a disconnect CoA message is being sent to the AOS-CX switch.

An administrator has performed the following configuration

```
Access1(config)# ip dns host cppm.arubatrainng.com 10.254.1.23 vrf mgmt
Access1(config)# radius-server host cppm.arubatrainng.com key plaintext aruba123 vrf mgmt
Access1(config)# aaa group server radius cppm
Access1(config-sg)# server cppm.arubatrainng.com vrf mgmt
Access1(config-sg)# exit
Access1(config)# aaa accounting port-access start-stop interim 5 group cppm
Access1(config)# radius dyn-authorization client cppm.arubatrainng.com secret-key plaintext aruba123 vrf mgmt
Access1(config)# radius dyn-authorization enable
```

What is the most likely cause of this issue?

- A. There is a mismatch between the RADIUS secret on the switch and CPPM.
- B. The SSL certificate for CPPM has not been added as a trust point on the switch
- C. Change of Authorization has not been globally enabled on the switch
- D. There is a time difference between the switch and the ClearPass Policy Manager

**Answer: C**

Explanation:

Change of Authorization (CoA) is a feature that allows ClearPass Policy Manager (CPPM) to send messages to network devices such as switches to change the authorization state of a user session. CoA requires that both CPPM and the network device support this feature and have it enabled. For AOS-CX switches, CoA must be globally enabled using the command radius-server coa enable. If CoA is not enabled on the switch, the disconnect CoA message from CPPM will be ignored and the user session will not be terminated.

**NEW QUESTION # 118**

Drag and Drop Question

Match the terms below to their characteristics (Options may be used more than once or not at all.)

Term	Characteristic
Broadcast	A device with IP address 10.1.3.7 in a network wants to send the traffic stream to a device with IP address 10.13.4.2 in the other network
IP Directed Broadcast	One/more senders and one/more recipients participate in data transfer traffic
Multicast	Sent to all hosts on a remote network
Unicast	Sent to all NICs on the same network segment as the source NIC

**Answer:**

Explanation:

Term	Characteristic
Unicast	A device with IP address 10.1.3.7 in a network wants to send the traffic stream to a device with IP address 10.13.4.2 in the other network
Multicast	One/more senders and one/more recipients participate in data transfer traffic
IP Directed Broadcast	Sent to all hosts on a remote network
Broadcast	Sent to all NICs on the same network segment as the source NIC
