NEW QUESTION # 25
An employee wants a consulting company to procure a data set that contains age, ethnicity, and diabetes status. During development, the employer wants to ensure the integrity of the data.
Which of the following is the best strategy to accomplish this task?

- A. Conducting human evaluation
- B. Querying the model
- C. Implementing checksums
- D. Enabling log monitoring

Answer: C

Explanation:
Checksums ensure data integrity by detecting any unauthorized or accidental changes to the dataset. This provides a reliable way to confirm that sensitive attributes such as age, ethnicity, and diabetes status remain unaltered during development.

NEW QUESTION # 26

A detection engineering team wants to use AI to automatically prevent vulnerable code from reaching production. Which of the following is the most effective way to accomplish this task?

- A. Deploying an integrated development environment (IDE) plug-in that will warn developers of dangerous code before compiling
- B. Developing an agentic penetration testing tool to validate potential vulnerable code
- C. Using a security orchestration, automation, and response (SOAR) with a machine learning (ML) model to classify code
- D. Implementing a large language model (LLM) in the continuous integration and continuous deployment (CI/CD) runner to examine code and pass or fail build jobs

Answer: D

Explanation:
Integrating an LLM into the CI/CD pipeline ensures automated code review at build time, blocking vulnerable code from reaching production. This enforces security checks consistently and effectively during the deployment process.

NEW QUESTION # 27

An attacker successfully completes a denial-of-service (DoS) attack through the context window of an AI system. Thousands of characters are obfuscated and hidden behind an emoji. Which of the following techniques best mitigates this type of attack?

- A. Prompt filter
- B. Pattern recognition
- C. Large language model (LLM)-as-a-judge
