Quiz EC-COUNCIL - 312-38 Updated Complete Exam Dumps

If you buy online classes, you will need to sit in front of your computer on time at the required time; if you participate in offline counseling, you may need to take an hour or two of a bus to attend class. But if you buy 312-38 test guide, things will become completely different. Unlike other learning materials on the market, 312-38 torrent prep has an APP version. You can download our app on your mobile phone. And then, you can learn anytime, anywhere. Whatever where you are, whatever what time it is, just an electronic device, you can do exercises. With 312-38 Torrent prep, you no longer have to put down the important tasks at hand in order to get to class; with 312-38 exam questions, you don't have to give up an appointment for study.

The EC-COUNCIL 312-38 exam covers a wide range of topics including network security, network protocols, network defense, network perimeter security, network topologies, and network devices. It also includes hands-on practical exercises, which will test the candidate's ability to apply their knowledge in real-world scenarios. 312-38 Exam is conducted online and consists of 100 multiple-choice questions, which must be completed within four hours.

EC-COUNCIL EC-Council Certified Network Defender CND Sample Questions (Q55-Q60):

NEW QUESTION # 55

How is a "risk" represented?

- A. Motive (goal) + method + vulnerability
- B. Asset + threat
- C. Motive (goal) + method
- **D. Asset + threat + vulnerability**

Answer: D

NEW QUESTION # 56

Fill in the blank with the appropriate file system. Alternate Data Streams (ADS) is a feature of the _____ file system, allowing more than one data stream to be associated with a filename.

Answer:

Explanation:

NTFS

NEW QUESTION # 57

Simon had all his systems administrators implement hardware and software firewalls to ensure network security. They implemented IDS/IPS systems throughout the network to check for and stop any unauthorized traffic that may attempt to enter. Although Simon and his administrators believed they were secure, a hacker group was able to get into the network and modify files hosted on the company's website. After searching through the firewall and server logs, no one could find how the attackers were able to get in. He decides that the entire network needs to be monitored for critical and essential file changes. This monitoring tool alerts administrators when a critical file is altered. What tool could Simon and his administrators implement to accomplish this?

- A. They need to use Nessus
- B. They can implement Wireshark
- C. Snort is the best tool for their situation
- **D. They could use Tripwire**

Answer: D

Explanation:

Simon's situation requires a tool that can monitor and alert administrators of critical file changes across the network. Tripwire is a File Integrity Monitoring (FIM) tool that serves this exact purpose. It can detect changes to system and configuration files, directories, and registry keys, and it is especially useful for spotting unauthorized changes that could indicate a security breach. Tripwire can help ensure that important files have not been tampered with, which seems to be the concern for Simon's network following the incident.

NEW QUESTION # 58

In which of the following attacks does an attacker successfully insert an intermediary software or program between two

communicating hosts?

- **A. Man-in-the-middle**
- B. Buffer overflow
- C. Session hijacking
- D. Denial-of-Service

Answer: A

Explanation:

Man-in-the-middle attacks occur when an attacker successfully inserts an intermediary software or program between two communicating hosts. The intermediary software or program allows attackers to listen to and modify the communication packets passing between the two hosts. The software intercepts the communication packets and then sends the information to the receiving host. The receiving host responds to the software, presuming it to be the legitimate client.

Answer option B is incorrect. A Denial-of-Service (DoS) attack is mounted with the objective of causing a negative impact on the performance of a computer or network. It is also known as a network saturation attack or bandwidth consumption attack. Attackers perform DoS attacks by sending a large number of protocol packets to the network. The effects of a DoS attack are as follows:

Saturates network resources

Disrupts connections between two computers, thereby preventing communications between services Disrupts services to a specific computer Causes failure to access a Web site Results in an increase in the amount of spam A Denial-of-Service attack is very common on the Internet because it is much easier to accomplish. Most of the DoS attacks rely on the weaknesses in the TCP/IP protocol.

Answer option D is incorrect. A buffer-overflow attack is performed when a hacker fills a field, typically an address bar, with more characters than it can accommodate. The excess characters can be run as executable code, effectively giving the hacker control of the computer and overriding any security measures set. There are two main types of buffer overflow attacks:

stack-based buffer overflow attack:

Stack-based buffer overflow attack uses a memory object known as a stack. The hacker develops the code which reserves a specific amount of space for the stack. If the input of user is longer than the amount of space reserved for it within the stack, then the stack will overflow.

heap-based buffer overflow attack:

Heap-based overflow attack floods the memory space reserved for the programs.

Answer option A is incorrect. Session hijacking refers to the exploitation of a valid computer session to gain unauthorized access to information or services in a computer system. In particular, it is used to refer to the theft of a magic cookie used to authenticate a user to a remote server. It has particular relevance to Web developers, as the HTTP cookies used to maintain a session on many Web sites can be easily stolen by an attacker using an intermediary computer or with access to the saved cookies on the victim's computer (see HTTP cookie theft).

TCP session hijacking is when a hacker takes over a TCP session between two machines. Since most authentication only occurs at the start of a TCP session, this allows the hacker to gain access to a machine.

NEW QUESTION # 59

The-----protocol works in the network layer and is responsible for handling the error codes during the delivery of packets. This protocol is also responsible for providing communication in the TCP/IP stack.

- A. RARP
- B. DHCP
- C. ARP
- **D. ICMP**

Answer: D

NEW QUESTION # 60

.....

Many candidates who are ready to participate in the EC-COUNCIL certification 312-38 exam may see many websites available online to provide resources about EC-COUNCIL certification 312-38 exam. However, GetValidTest is the only website whose exam practice questions and answers are developed by a study of the leading IT experts's reference materials. The information of GetValidTest can ensure you pass your first time to participate in the EC-COUNCIL Certification 312-38 Exam.
