Do you want to have a new change about your life? If your answer is yes, it is high time for you to use the CTAL-TAE question torrent from our company. As the saying goes, opportunities for those who are prepared. If you have made up your mind to get respect and power, the first step you need to do is to get the CTAL-TAE Certification, because the certification is a reflection of your ability. If you have the CTAL-TAE certification, it will be easier for you to get respect and power. Our company happened to be designing the CTAL-TAE exam question.

ISQI CTAL-TAE certification exam is a valuable certification for anyone looking to advance their career in software testing and test automation. With its global recognition and challenging exam format, passing the CTAL-TAE Exam can provide a competitive edge in the job market and increase opportunities for career growth.

Newly Released ISQI CTAL-TAE Dumps in Three Formats [2026]

In order to cater to different needs for customers, three versions for CTAL-TAE training materials are available, and you can choose the most suitable one according to your own needs. CTAL-TAE PDF version is printable, and if you prefer to practice on paper, you can choose this version and print it into hard one. CTAL-TAE Soft test engine can stimulate the real exam environment, so that you can know the process of the exam, you can choose this version. Besides, CTAL-TAE Soft test engine has two modes for practice, and it supports MS operating system. CTAL-TAE Online test engine is convenient and easy to learn, and it has testing history and performance review, if you like this mode, you can choose this version.

ISQI CTAL-TAE certification exam is an important certification for software testers who want to demonstrate their knowledge and proficiency in test automation engineering. It is a challenging exam that requires extensive preparation and study. However, with the right training and study materials, candidates can acquire the necessary knowledge and skills to pass the exam and advance their career in software testing.

To be eligible for the CTAL-TAE certification exam, candidates must have already achieved the ISTQB Certified Tester Foundation Level (CTFL) certification and have completed the ISTQB Certified Tester Advanced Level, Test Analyst (CTAL-TA) certification. The CTAL-TAE Exam consists of 40 multiple-choice questions and candidates have 90 minutes to complete the exam. A passing score of 65% is required to earn the CTAL-TAE certification. ISTQB Certified Tester Advanced Level, Test Automation Engineering certification is valid for five years and can be renewed by retaking the exam or by obtaining an ISTQB Agile Tester Extension certification.

ISQI ISTQB Certified Tester Advanced Level, Test Automation Engineering Sample Questions (Q46-Q51):

NEW QUESTION # 46

Consider a TAS that exclusively uses the APIs of a SUT. To make this work, significant changes have been required to the SUT by adding a set of dedicated test interfaces to the APIs. All the automated tests will use these test interfaces when interacting with the SUT. Assume that you are currently verifying the correctness of the automated test environment and test tool setup.

Which of the following would you expect to be the MOST specific risk associated with this scenario?

- A. The connectivity from the TAS to the dedicated test interfaces will not work
- B. The automated test cases will not contain the expected result
- C. False alarms, that are unlikely to occur in the real world, will be observed during testing
- D. The process of configuring the TAS will be error-prone due to manual intervention

Answer: A

NEW QUESTION # 47

Which of the following practices can be used to specify the active (i.e., actually available) features for each release of the SUT and determine the corresponding automated tests that must be executed for a given release?

- A. Feature-driven development
- B. The use of feature toggles
- C. The use of feature files
- D. Test-driven development

Answer: B

Explanation:

TAE materials commonly describe feature toggles (feature flags) as a mechanism to control which features are active in a given release or deployment without necessarily changing the codebase structure for each variant. Because toggles determine what functionality is actually enabled, they provide a practical basis for selecting which automated tests should run for that release configuration. When a feature is disabled via a toggle, executing tests for it can create false failures or wasted effort; when enabled, the corresponding tests become relevant as release evidence. Feature-driven development is a product/development planning approach and does not, by itself, provide an operational mechanism to declare what is active at runtime.

Feature files (often associated with BDD) specify behavior scenarios, but they do not inherently indicate whether a feature is active in a particular release unless explicitly tied to toggles or release configuration.

TDD focuses on coding practices at the unit level and similarly does not specify release-time feature availability. Feature toggles directly express "active vs. inactive" functionality and can be used to drive risk-based and relevance-based test execution decisions, matching the requirement precisely.

NEW QUESTION # 48

Which of the following descriptions of what some test automation tools can be used to do is TRUE?

- A. Make video recordings of UI testing sessions to share with stakeholders to show the functionality and appearance of an application
- B. Autonomously design intuitive UIs and evaluate them, as well as evaluate the overall UX (User Experience) of an application
- C. Autonomously perform exploratory testing sessions based on test charters to find defects within an application
- D. Analyze test results, code changes, and metrics to predict potential defects and areas of high risk within an application

Answer: A

Explanation:

TAE recognizes a range of supporting capabilities offered by test tools beyond pure scripted execution, including reporting, evidence capture, and run artifacts that help stakeholders understand what was tested.

Video recording of UI test sessions is a common feature in several UI automation ecosystems and cloud device /browser platforms, used to provide visual evidence of steps performed, failures observed, and the application's look-and-feel during execution. This supports debugging and communication with non-technical stakeholders. Option A overstates what test automation tools do: autonomously designing intuitive UIs and evaluating UX is largely outside typical test automation tool scope and requires human-centered design methods. Option C is also overstated: exploratory testing is inherently human-driven; tools can assist (session notes, heuristics support, telemetry) but do not truly conduct exploratory testing autonomously based on charters in the general TAE framing. Option B touches on advanced analytics and AI/ML-assisted quality insights; while some platforms offer risk prediction features, the phrasing implies broad predictive defect capability, which is not a standard, dependable tool function emphasized in TAE compared with concrete capabilities like artifact capture. Therefore, the clearly true, commonly supported capability is making video recordings of UI testing sessions.

NEW QUESTION # 49

Which of the following BEST describes why it is important to separate test definition from test execution in a TAA?

- A. It allows testers to find more defects on the SUT
- B. It allows developing steps of the test process without being closely tied to the SUT interface.
- C. It allow choosing different paradigms (e.g event-driven) for the interaction TAS and SUT
- **D. It allows specify test cases without being closely tied to the tool to run them against the SUT**

Answer: D

NEW QUESTION # 50

Consider the following layers of the gTAA structure:

- a. Test generation layer
- b. Test definition layer
- c. Test execution layer
- d. Test execution layer

Consider the following capabilities associated with these layers.

Acquire all the necessary resources before each test and release all after run, in order to avoid interdependences between test Allow the automated test scripts on an abstract level to interact with components, configurations and interfaces of the SUT.

Design test directives that allow configuring the algorithms used to automatically produce the test cases a given model of the SUT.

Allow the definition and implementation of test cases and data by means of templates and/or guidelines.

Which of the following BEST matches each layer with the appropriate capability?

- A. a-3, b-4, c-1, d-2
- **B. a-4, b-3, c-2, d-1**
- C. a-3, b-4, c-2, d-1
- D. a-4, b-3, c-1, d-2

Answer: B

NEW QUESTION # 51
