New Study SecOps-Generalist Questions & SecOps-Generalist Free Exam Questions

Our Palo Alto Networks Security Operations Generalist (SecOps-Generalist) exam questions are being offered in three easy-to-use

and compatible formats. This SecOps-Generalist exam dumps formats offer a user-friendly interface and are compatible with all devices, operating systems, and browsers. The DumpsReview Palo Alto Networks Security Operations Generalist (SecOps-Generalist) PDF questions file contains real and valid Palo Alto Networks SecOps-Generalist exam questions that assist you in SecOps-Generalist exam dumps preparation and boost the candidate's confidence to pass the challenging Palo Alto Networks Security Operations Generalist (SecOps-Generalist) exam easily.

Palo Alto Networks Security Operations Generalist Sample Questions (Q209-Q214):

NEW QUESTION # 209

When a remote user's device attempts to connect to a GlobalProtect Gateway, and the GlobalProtect policy requires a Host Information Profile (HIP) check, where is the result of this HIP check (whether the device is compliant with configured HIP profiles) typically logged?

- A. Threat logs
- B. Traffic logs
- C. System logs
- D. Decryption logs
- E. HIP Match logs

Answer: E

Explanation:

HIP checks generate dedicated logs. Option A logs session activity after policy match. Option B logs security threats. Option D logs system events. Option E logs decryption status. HIP Match logs specifically record the outcome of HIP checks performed by the GlobalProtect gateway, indicating which HIP profiles were matched or not matched, and the compliance status of the endpoint based on its reported attributes.

NEW QUESTION # 210

How does Cortex XSIAM enhance proactive security operations?

Response:

- A. By automatically blocking all external network traffic
- B. By focusing only on known attack signatures
- C. By enabling AI-powered threat hunting and anomaly detection
- D. By eliminating the need for EDR solutions

Answer: C

NEW QUESTION # 211

What is the purpose of log stitching in Cortex XDR?

Response:

- A. To correlate different log sources into a unified attack storyline
- B. To compress large log files for easier storage
- C. To automatically archive logs after 30 days
- D. To remove duplicate log entries for better performance

Answer: A

NEW QUESTION # 212

An organization wants to prevent sensitive customer data (e.g., credit card numbers, national ID numbers) from being uploaded to unauthorized cloud storage services or transmitted via email. They are using Palo Alto Networks NGFWs with the Enterprise Data Loss Prevention (DLP) subscription. Which core Content-ID profile, working in conjunction with the DLP subscription and applied to relevant Security Policy rules, is used to detect and enforce policies based on the presence of these sensitive data patterns within application traffic?

- A. Threat Prevention profile
- B. File Blocking profile
- C. Antivirus profile
- D. URL Filtering profile
- E. Data Filtering profile

Answer: E

Explanation:

The Enterprise Data Loss Prevention (DLP) subscription enhances the capabilities of the Data Filtering profile. The Data Filtering profile is the specific Content-ID component used to define and detect sensitive data patterns within traffic. When the DLP subscription is active, it provides a broader range of predefined data identifiers and advanced capabilities for the Data Filtering profile. Option A detects threats. Option B blocks file types. Option D blocks URLs. Option E detects malware signatures.

NEW QUESTION # 213

An organization is leveraging Palo Alto Networks Cloud-Delivered Security Services (CDSS) like Advanced Threat Prevention, Advanced URL Filtering, and Advanced DNS Security with their Strata NGFW deployment. To apply these services effectively, Security Policy rules must be configured to direct traffic for inspection. Which core component of the Security Policy rule is used to apply the actions defined within the CDSS-enabled security profiles to traffic that matches the rule?

- A. Source Zone
- B. Destination Zone
- C. Security Profile Group
- D. Service
- E. Application

Answer: C

Explanation:

Security Policy rules match traffic based on criteria like zones, addresses, users, applications, and services. Once traffic matches a rule, the actions defined in the rule are applied. The CDSS-enabled inspection actions (blocking malware, filtering URLs, preventing exploits, etc.) are defined within security profiles (Threat, URL, File, Data, DNS), which are then bundled into a Security Profile Group and attached to the Security Policy rule. Option A, B, C, and D are matching criteria. Option E is where the decision to apply a suite of security profiles for inspection resides within the rule.

NEW QUESTION # 214

.....

Our valid Palo Alto Networks SecOps-Generalist dumps make the preparation easier for you. With these real SecOps-Generalist Questions, you can prepare for the test while sitting on a couch in your lounge. Whether you are at home or traveling anywhere, you can do SecOps-Generalist exam preparation with our Palo Alto Networks SecOps-Generalist Dumps.
