An architect is designing a new vSphere platform to meet a list of requirements from the security team. Which two requirements would be classified as non-functional requirements- (Choose two.)

- A. Log information must be verbose to support incident resolution
- B. Critical events generated within the platform must be logged to an external Syslog service
- C. Migration of virtual machines between hosts must be encrypted
- D. A common content library must be maintained across all data centers
- E. Data integrity must be ensured

**정답: A,C**

A - Migration support could be a FR, but as it says encrypted it becomes NFR.

B - Logging would be a FR but calling out it should be verbose makes it NFR.

#### **질문 # 78**

What is a benefit of using workload domains in VMware Cloud Foundation?

- A. Workload domains allow for manual provisioning of vSphere clusters using the SDDC Manager.
- B. Each workload domain can only support a maximum of three ESXi hosts, making it easy to manage small workloads.
- C. Workload domains are pre-configured and automatically deployed according to industry best practices for SDDC implementation.
- D. Workload domains require separate instances of vCenter, decreasing complexity and management overhead.

**정답: C**

**설명:**

Workload domains in VMware Cloud Foundation provide a way to logically organize and manage resources within the software-defined data center (SDDC). They are pre-configured and automatically deployed by SDDC Manager, which follows VMware's industry best practices for architecture and configuration. This reduces manual effort and complexity, ensuring that the implementation is aligned with VMware's recommended configurations.

#### **질문 # 79**

The architect for a large enterprise is tasked with reviewing a proposed design created by a service partner.

Which design elements are expected to be detailed within the physical design section of the documentation?

- A. A design diagram illustrating the configuration and specific attributes, such as IP addresses
- B. A list of requirements, constraints, and risks
- C. An entity relationship diagram describing upstream and downstream dependencies for specific service components
- D. A solution architecture diagram with the components and data flow

**정답: A**

**설명:**

The physical design is based on the logical design. The physical design includes specific hardware from specific vendors. This design also lists specific configurations for each of the components that are deployed.

#### **질문 # 80**

An architect is conducting interviews to gather requirements for a new vSphere-based private cloud solution.

The following information has been provided by the customer:

The customer, after 10 years within an outsourced managed service contract, has decided to bring application hosting back in-house but lacks the VMware skills to support this.

The customer currently has 5,000 workloads under contract and managed by their partner.

The customer would like to keep IT infrastructure costs at a minimum.

The customer would like to ensure that the solution supports the company's green IT agenda by reducing their carbon footprint.

Which statement is classified as a business factor that would impact the design?

- A. The customer would like to ensure that the solution supports the company's green IT agenda by reducing their carbon footprint.
- B. The customer currently has 5,000 workloads under contract and managed by their partner.

- C. The customer, after 10 years within an outsourced managed service contract, has decided to bring application hosting back in-house but lacks the VMware skills to support this.
- D. The customer would like to keep IT infrastructure costs at a minimum.

정답: D

설명:

This is a business factor because it directly relates to the financial goals and constraints of the customer.

Keeping IT infrastructure costs at a minimum will impact the design by influencing decisions regarding hardware selection, deployment scale, and resource allocation, among other factors.
