2026 800-150: High Hit-Rate Supporting Cisco Devices for Field Technicians Book Pdf

We are committed to using PrepAwayPDF Cisco 800-150 Exam Training materials, we can ensure that you pass the exam on your first attempt. If you are ready to take the exam, and then use our PrepAwayPDF Cisco 800-150 exam training materials, we guarantee that you can pass it. If you do not pass the exam, we can give you a refund of the full cost of the materials purchased, or free to send you another product of same value.

Cisco Supporting Cisco Devices for Field Technicians Sample Questions (Q15-Q20):

NEW QUESTION # 15

Drag and drop the characteristics from the left onto the corresponding categories of MDS switch on the right.

□

Answer:

Explanation:

□ Explanation:

□ Cisco MDS switches are segmented into two key categories: Director-Class and Fabric Switches, each tailored for different SAN environments:

Director-Class Switches (e.g., Cisco MDS 9700 Series):

Modular and highly scalable

Support hot-swappable components (line cards, supervisors, fabric modules) High port density and performance for core SANs in enterprise data centers Fabric Switches (e.g., Cisco MDS 9148T):

Compact, fixed-form factor

Best suited for smaller SANs or edge locations

Cost-effective and simple to deploy

This distinction is important when selecting hardware for data center core vs access layers in SAN architectures.

NEW QUESTION # 16

Drag and drop the characteristics from the left onto the corresponding categories of MDS switch on the right.

NEW QUESTION # 17

Which two network design strategies in Cisco data center solutions improve fault tolerance and high availability? (Choose two.)

- A. Access layer switch deployment
- **B. Redundant supervisor engines and fabric modules**
- C. SAN extension over IP networks (FCIP)
- **D. Virtual port channels for link aggregation**
- E. High-density 10/40/100 gigabit Ethernet connectivity

Answer: B,D

Explanation:

To ensure high availability and fault tolerance in Cisco data center designs, two effective strategies include:

* Redundant Supervisor Engines and Fabric Modules: These provide failover capabilities, so if one supervisor or fabric module fails, another can take over, maintaining network operations without interruption.

* Virtual Port Channels (vPCs): vPCs allow connections to be made to two physical switches while appearing as one logical switch. This prevents loops and adds redundancy and load balancing, which is critical in high-availability environments.

Other options may enhance performance (e.g., high-density Ethernet) or extend functionality (e.g., FCIP), but do not directly contribute to fault tolerance and high availability in the same way.

NEW QUESTION # 19

Which Cisco switch series is designed to handle the combined responsibilities of core and distribution layers in a converged architecture?

- A. Meraki MS400 Series
- B. Catalyst 1300 Series
- C. Catalyst 9000 Series
- D. Catalyst 6500 E-Series

Answer: C

Explanation:

The Cisco Catalyst 9000 Series is engineered to address the evolving needs of modern enterprise networks by integrating the functionalities of both the core and distribution layers into a unified, converged architecture.

This series offers advanced capabilities such as high-speed data forwarding, enhanced security features, and support for automation and programmability, making it suitable for scalable and efficient network designs.

The Catalyst 9000 Series includes models like the Catalyst 9500 and 9600, which are optimized for core and distribution roles, providing high throughput and reliability. These switches support advanced features like Software-Defined Access (SD-Access) and are designed to meet the demands of cloud-scale and security-focused environments.

In contrast, the Meraki MS400 Series (Option A) is tailored for cloud-managed aggregation and lacks the comprehensive feature set required for core functionalities. The Catalyst 6500 E-Series (Option B), while historically significant, is considered a legacy platform and may not support the latest advancements in network convergence. The Catalyst 1300 Series (Option C) is designed for small to medium-sized businesses and is not intended for core or distribution layer deployments.
