Pass CWNP CWSP-208 Exam with PassQuestion CWSP-208 questions and answers in the first attempt.
<https://www.passquestion.com/>

What's more, part of that ITdumpsfree CWSP-208 dumps now are free: <https://drive.google.com/open?id=1lhAamKJOP67MldPI38hWLEq-H8J6FAwp>

The third format is desktop CWSP-208 practice exam software that can be accessed easily after installing it on your Windows PC or Laptop. These formats are there so that the students can use them as per their unique needs and prepare successfully for CWSP-208 the on first try. The CWSP-208 mock tests are specially built for you to evaluate what you have studied. These Certified Wireless Security Professional (CWSP) (CWSP-208) practice exams (desktop and web-based) are customizable, which means that you can change the time and questions according to your needs. Our CWSP-208 practice tests teach you time management so you can pass the Certified Wireless Security Professional (CWSP) (CWSP-208) certification exam.

To develop a new study system needs to spend a lot of manpower and financial resources, first of all, essential, of course, is the most intuitive skill CWSP-208 learning materials, to some extent this greatly affected the overall quality of the learning materials. Our CWSP-208 study training materials do our best to find all the valuable reference books, then, the product we hired experts will carefully analyzing and summarizing the related CWSP-208 Exam Materials, eventually form a complete set of the review system. And you will be surprised by the excellent quality of our CWSP-208 learning guide.

CWSP-208 Exam Questions and Certified Wireless Security Professional (CWSP) Torrent Prep - CWSP-208 Test Guide

If you are preparing for the CWNP CWSP-208 exam dumps our CWSP-208 Questions help you to get high scores in your CWNP CWSP-208 exam. Test your knowledge of the CWNP CWSP-208 Exam Dumps with ITdumpsfree CWNP CWSP-208 practice questions. The software is designed to help with CWNP CWSP-208 exam dumps preparation.

CWNP Certified Wireless Security Professional (CWSP) Sample Questions (Q29-Q34):

NEW QUESTION # 29

Given: You must implement 7 APs for a branch office location in your organization. All APs will be autonomous and provide the same two SSIDs (CORP1879 and Guest).

Because each AP is managed directly through a web-based interface, what must be changed on every AP before enabling the WLANs to ensure proper staging procedures are followed?

- A. Output power
- B. Fragmentation threshold
- C. Administrative password
- D. Cell radius

Answer: C

Explanation:

For security and proper management, each autonomous AP must have:

A unique, non-default administrative password.

This ensures attackers cannot guess login credentials and access AP settings.

Especially critical when managing via web interface, which may expose login portals to the local network.

Incorrect:

A). Fragmentation threshold is rarely adjusted except for special performance tuning.

C & D. Output power and cell radius settings are adjusted during RF design, but they don't relate to staging /security directly.

NEW QUESTION # 30

You perform a protocol capture using Wireshark and a compatible 802.11 adapter in Linux. When viewing the capture, you see an auth req frame and an auth rsp frame. Then you see an assoc req frame and an assoc rsp frame. Shortly after, you see DHCP communications and then ISAKMP protocol packets. What security solution is represented?

- A. 802.1X/PEAPv0/MS-CHAPv2
- B. Open 802.11 authentication with IPSec
- C. WPA2-Personal with AES-CCMP
- D. EAP-MD5
- E. 802.1X/EAP-TTLS

Answer: B

Explanation:

The frame sequence described shows:

802.11 Open System authentication and association

DHCP communication (for IP configuration)

ISAKMP packets, which are part of IPSec (used for key exchange and tunnel negotiation) This indicates that link-layer authentication is not used, but instead, higher-layer encryption (IPSec VPN) secures communications.

Incorrect:

A and C. Would show EAP negotiation and 802.1X authentication frames.

D). WPA2-Personal would include a 4-Way Handshake before DHCP.

E). EAP-MD5 does not involve ISAKMP and is used within 802.1X authentication.

Wireshark Frame Analysis of IPSec Tunnels

NEW QUESTION # 31

What are the three roles of the 802.1X framework, as defined by the 802.1X standard, that are performed by the client STA, the AP (or WLAN controller), and the RADIUS server? (Choose 3)

- A. Authentication Server
- B. Enrollee
- C. Registrar
- D. Control Point
- E. Authenticator
- F. AAA Server
- G. Supplicant

Answer: A,E,G

Explanation:

The IEEE 802.1X framework consists of three defined roles:

Supplicant (E): The client device (STA) that requests access to the network.

Authenticator (F): The network device (usually an AP or switch) that enforces access control and acts as an intermediary between the supplicant and the authentication server.

Authentication Server (D): Typically a RADIUS server that validates credentials and responds with access decisions.

Incorrect:

A & B. Enrollee and Registrar are roles in Wi-Fi Protected Setup (WPS), not 802.1X.

C). AAA Server is a broader term, the specific role in 802.1X is "Authentication Server." G). "Control Point" is not a formal 802.1X role.

References:

CWSP-208 Study Guide, Chapter 4 (802.1X Authentication Roles)

NEW QUESTION # 32

Given: You have implemented strong authentication and encryption mechanisms for your enterprise 802.11 WLAN using 802.1X/EAP with AES-CCMP.

For users connecting within the headquarters office, what other security solution will provide continuous monitoring of both clients and APs with 802.11-specific tracking?

- A. WLAN endpoint agent software
- B. IPSec VPN client and server software
- C. Wireless intrusion prevention system
- D. Internet firewall software
- E. RADIUS proxy server

Answer: C

Explanation:

In integrated WIPS systems, radios are shared between client servicing and security scanning. To maintain quality of service for latency-sensitive applications such as VoWiFi (Voice over Wi-Fi), scanning operations may be temporarily suspended or deprioritized, potentially reducing security monitoring during those periods.

NEW QUESTION # 33

What wireless authentication technologies may build a TLS tunnel between the supplicant and the authentication server before passing client authentication credentials to the authentication server? (Choose 3)

- A. PEAPv0/MSCHAPv2
- B. LEAP
- C. EAP-TTLS
- D. EAP-MD5
- E. EAP-TLS

Answer: A,C,E

Explanation:

All three EAP methods - EAP-TLS, PEAPv0, and EAP-TTLS - establish a secure TLS tunnel between the supplicant and the authentication server before client credentials are passed:

B). EAP-TLS uses mutual certificate authentication inside a TLS tunnel.

D). PEAPv0/MSCHAPv2 creates a TLS tunnel and then authenticates the user with MSCHAPv2 inside the tunnel.

E). EAP-TTLS creates a TLS tunnel and then supports legacy credentials (e.g., PAP, CHAP, MSCHAPv2) securely within it.

Incorrect:

A). EAP-MD5 does not use TLS at all.

C). LEAP is not TLS-based and is considered insecure.
