You will never have language barriers, and the learning process is very easy for you. What are you waiting for? As long as you decide to choose our Talend-Core-Developer Exam Questions, you will have an opportunity to prove your abilities, so you can own more opportunities to embrace a better life.

Talend Core Certified Developer Exam Sample Questions (Q51-Q56):

NEW QUESTION # 51
Which action should you perform to calculate the overall Trust Score for multiple customer datasets?

- A. Review the rating of selected datasets in the group tab.
- B. Use the search bar to filter the customer datasets and manually calculate the score.
- C. Mark the datasets in the dataset list, and the score updates in the detailed view.
- D. Use the search bar to filter the customer datasets, and the score will automatically update.

Answer: D

Explanation:
Comprehensive and Detailed Explanation:
To calculate the overall Trust Score for multiple customer datasets:
* Use the search bar to filter the customer datasets, and the score will automatically update (Option B):
* Filtering datasets using the search functionality aggregates the Trust Scores of the selected datasets, providing an overall score for the group.
Why not other options?
* Option A: Reviewing individual ratings does not provide an aggregated Trust Score.
* Option C: Marking datasets does not trigger an automatic update of the aggregated score.
* Option D: Manual calculation is unnecessary as the system provides automatic aggregation upon filtering.

NEW QUESTION # 52
What is the default port for the REST Endpoint when using tRESTRequest in Talend Studio?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:
Comprehensive and Detailed Explanation:
The default REST endpoint port for tRESTRequest in Talend Studio is 8090.
* Port 8090 (Correct Answer - Option D):
* When running a REST service inside Talend Studio, the default listening port is 8090.
* This can be changed in the component settings if required.
* Other port options explained:
* 5040 & 5070: Not default ports used for Talend REST services.
* 8040: Used in Talend Runtime, not in Studio.

NEW QUESTION # 53
You can initialize your component endpoint, API mappings, and documentation from your API definition.
Which API definitions are supported by tRESTRequest?

- A. WSDL file
- B. XML definition file
- C. CSV definition file
- D. OAS/Swagger 2.0 file

Answer: D

Explanation:
Comprehensive and Detailed Explanation:
ThetRESTRequest componentsupportsOpenAPI Specification (OAS)/Swagger 2.0for initializing component endpoints, API mappings, and documentation.
* OAS/Swagger 2.0 file (Correct Answer - Option D):
* tRESTRequest allows API-first development by importing aSwagger 2.0 (OAS) definition.
* This enables automatic configuration of API endpoints, request parameters, and response structures.
* Why not other options?
* CSV definition file (Option A):Not a valid API definition format.
* XML definition file (Option B):XML files are not standard for REST API definitions.
* WSDL file (Option C):WSDL is used for SOAP-based web services, not REST.

NEW QUESTION # 54
A colleague has exported a Data Integration Job to run outside Talend Studio.
How do you run the Job?

* A. Install the Job and start the resulting service.
* B. Extract the files from the archive and run the JAR file.
* C. Extract the contents of the archive and run the batch file and shell script.
* D. Extract the content of the archive and run the batch file or the shell script.

Answer: D

Explanation:
To run a job that has been exported by a colleague to run outside Talend Studio, you need to extract the content of the archive and run the batch file or the shell script. The archive file contains all the files and libraries required to run the job independently from Talend Studio on any platform that supports Java. The archive file also contains two executable files: a batch file (.bat) for Windows platforms and a shell script (.sh) for Linux platforms. You need to run the appropriate file for your platform by double-clicking on it or using a command line tool. This will launch the job and display its output in a console window.
You do not need to extract the contents of the archive and run both the batch file and shell script, install the job and start the resulting service, or extract the files from the archive and run the JAR file. These methods are not correct or available in Talend Studio and may cause errors or unexpected results. References: Talend Open Studio: Open-source ETL and Free Data Integration | Talend, [Build Job - 7.3]

NEW QUESTION # 55
You need to call a different Job within a Job you are developing.
Which mechanism allows you to pass the parameters to the lob you want to call?

* A. Java Function paramters
* B. Context parameters
* C. CommandLine options
* D. File

Answer: B

Explanation:
To call a different job within a job you are developing, you can use the tRunJob component. This component allows you to execute another job as a subjob within a parent job. To pass the parameters to the job you want to call, you can use the context parameters. Context parameters are variables that can store values that can be changed at runtime or between different contexts. You can define context parameters in the Contexts tab of your job and assign them values for each context. You can also pass context parameters from the parent job to the child job by using the Context Param tab of the tRunJob component. This way, you can parameterize the properties or expressions of the child job with the values from the parent job.
You do not need to use a file, command line options, or Java function parameters to pass parameters to a different job. These methods are not supported by Talend Studio and may cause errors or unexpected results.
