Certification 1Z0-1151-25 Torrent - 1Z0-1151-25 Valid Exam Notes

DOWNLOAD the newest ActualPDF 1Z0-1151-25 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=188Ab6MhmnvKKbBJ0eP_GD0D8i0OghKXx

In order to save a lot of unnecessary trouble to users, we have completed our Oracle Cloud Infrastructure 2025 Multicloud Architect Professional study questions research and development of online learning platform, users do not need to download and install, only need your digital devices have a browser, can be done online operation of the 1Z0-1151-25 test guide. This kind of learning method is very convenient for the user, especially in the time of our fast pace to get Oracle certification. In addition, our test data is completely free of user's computer memory, will only consume a small amount of running memory when the user is using our product. At the same time, as long as the user ensures that the network is stable when using our 1Z0-1151-25 Training Materials, all the operations of the learning material of can be applied perfectly.

Oracle 1Z0-1151-25 Exam Syllabus Topics:

Topic	Details
Topic 1	• Implement Oracle Database@Google Cloud: This section measures the proficiency of Cloud Database Engineers in utilizing Oracle Database@Google Cloud. It explores the architecture and operational framework for running Oracle databases on Google Cloud. Candidates will learn about onboarding procedures, provisioning resources, and managing database services effectively to optimize performance and availability in a Google Cloud-integrated multi-cloud ecosystem.
Topic 2	• Core OCI Services Overview: This section evaluates the knowledge of Identity and Database Administrators in managing OCI's core services for multi-cloud integration. It covers the implementation of identity federation between OCI Identity Domains and external identity providers, ensuring secure authentication across multiple cloud environments. Candidates will also gain expertise in configuring Virtual Cloud Network (VCN) components and administering OCI database services, including Base Databases, Autonomous Databases, and HeatWave, to support scalable multi-cloud deployments.

Topic 3	• Introduction to Multicloud: This section of the exam measures the skills of Cloud Architects in understanding multicloud environments and their benefits. It covers the reasons organizations adopt multicloud strategies, including flexibility, cost optimization, and risk management. Candidates will learn about common multicloud use cases and how they are implemented in Oracle Cloud Infrastructure (OCI) to enhance interoperability and performance.
Topic 4	• Configure Multicloud Connection Options: This section assesses the abilities of Network Engineers in configuring connectivity solutions for OCI multi-cloud environments. It includes setting up secure networking options such as Site-to-Site VPN and FastConnect for seamless cloud integration. Candidates will also learn how to implement Oracle Interconnect services for establishing direct, high-performance connections between OCI and third-party cloud providers like Microsoft Azure and Google Cloud.
Topic 5	• Implement Oracle Database@Azure: This section tests the expertise of Database Solutions Architects in deploying and managing Oracle Database@Azure. It covers the architectural components and onboarding processes required for provisioning databases in Azure while maintaining Oracle's advanced database capabilities. Candidates will also focus on configuring high availability and disaster recovery strategies to ensure business continuity and data resilience in a multi-cloud setup.

100% Pass Rate Certification 1Z0-1151-25 Torrent to Obtain Oracle Certification

Please believe that our company is very professional in the research field of the 1Z0-1151-25 training questions, which can be illustrated by the high passing rate of the examination. Despite being excellent in other areas, we have always believed that quality and efficiency should be the first of our 1Z0-1151-25 real exam. For study materials, the passing rate is the best test for quality and efficiency. There may be some other study materials with higher profile and lower price than our products, but we can assure you that the passing rate of our 1Z0-1151-25 Learning Materials is much higher than theirs. And this is the most important. According to previous data, 98 % to 99 % of the people who use our 1Z0-1151-25 training questions passed the exam successfully. If you are willing to give us a trust, we will give you a success.

Oracle Cloud Infrastructure 2025 Multicloud Architect Professional Sample Questions (Q57-Q62):

NEW QUESTION # 57
What BGP IP addresses are necessary when configuring the Oracle virtual circuit in Oracle Interconnect for Azure?

- A. Only a secondary pair of BGP addresses is required.
- B. BGP addresses are not required for setting up the Oracle virtual circuit.
- C. Only a primary pair of BGP addresses is required.
- D. Both a primary and secondary pair of BGP addresses are required.

Answer: D

Explanation:
When setting up Oracle Interconnect for Azure, you need both a primary and a secondary pair of BGP (Border Gateway Protocol) IP addresses. These addresses are used to establish BGP peering between the Oracle Cloud Infrastructure (OCI) edge routers and the Azure edge routers.
Here's why both are necessary:
Redundancy and High Availability: The primary and secondary pairs provide redundancy. If the primary connection or its associated BGP session fails, the secondary connection takes over, ensuring continuous connectivity. This is a crucial aspect of a production-grade interconnect.
Why the other options are incorrect:
a). Only a secondary pair of BGP addresses is required: A secondary pair alone would not establish the initial connection. You need a primary pair to start the BGP peering.
b). BGP addresses are not required for setting up the Oracle virtual circuit: BGP is essential for dynamic routing and failover in the interconnect. Without BGP, the interconnect would not function as intended.

d). Only a primary pair of BGP addresses is required: While a primary pair can establish an initial connection, it doesn't provide the necessary redundancy for high availability.

NEW QUESTION # 58
What is used to monitor and analyze Oracle Exadata VM Cluster metrics in Azure for ABC Private Limited?

- A. Oracle Database Management Tool
- B. Microsoft Defender
- C. Azure Monitoring services
- D. OCI Monitoring services

Answer: C

Explanation:
Since the Oracle Exadata VM Cluster is deployed within an OCI pod inside the Azure data center as part of the Oracle Database@Azure offering, the primary monitoring and analysis of the infrastructure metrics (including Exadata-specific metrics) are done using Azure's native monitoring tools.
Here's why:
Integration with Azure: The OCI pod is deeply integrated into the Azure environment. This integration extends to monitoring, allowing Azure's monitoring services to collect metrics from the Exadata infrastructure.
Consistent Monitoring Experience: Using Azure Monitoring services provides a consistent monitoring experience for ABC Private Limited, as they can use the same tools and dashboards to monitor both their Azure-native workloads and their Oracle workloads running on Exadata in Azure.
Why the other options are not the primary solution:
A). OCI Monitoring services: While some management and control plane functions might interact with OCI, the primary monitoring of the Exadata infrastructure within Azure is handled by Azure's tools. It wouldn't make sense to route all monitoring data back to OCI for basic infrastructure metrics.
B). Microsoft Defender: Microsoft Defender is primarily a security tool, focused on threat detection and vulnerability management. While it might provide some insights into the security posture of the Exadata environment, it's not the primary tool for performance monitoring and analysis.
C). Oracle Database Management Tool: Oracle provides various database management tools (like Oracle Enterprise Manager). These tools are used for database-specific monitoring and administration (e.g., database performance, SQL tuning, etc.). However, for the underlying infrastructure metrics of the Exadata VM Cluster within Azure, Azure Monitoring services are the primary solution.

NEW QUESTION # 59
Which Autonomous Database deployment option offers exclusive use of Exadata hardware?

- A. Dedicated Deployment
- B. Exclusive Deployment
- C. Serverless
- D. Standalone Deployment

Answer: A

Explanation:
Here's why:
Autonomous Database Dedicated Infrastructure: This deployment option provides you with dedicated Exadata infrastructure for your Autonomous Databases. You get exclusive use of the Exadata hardware, providing the highest level of isolation, security, and control.
Here's why the other options are not correct:
Exclusive Deployment: This is not a standard term used for Autonomous Database deployment options.
Standalone Deployment: While not an official term, this might be confused with Serverless, which uses shared infrastructure.
Serverless: In the Serverless deployment option, your Autonomous Database shares Exadata infrastructure with other users. This provides a cost-effective solution for many workloads but doesn't offer exclusive use of hardware.

NEW QUESTION # 60
Which of the following statements accurately describes the IAM model in Oracle Database@Google Cloud?

- A. Oracle IAM and Google Cloud IAM are fully integrated to provide centralized user management.
- B. Oracle IAM is used for the OCI resources in the OCI pod, and Google Cloud IAM controls access to the Google Cloud resources.
- C. Google Cloud IAM is used to control access to both Oracle and Google Cloud resources from a single Google identity.
- D. Oracle IAM is the only IAM model used in the entire deployment.

Answer: B

Explanation:
This is a key aspect of the multi-cloud architecture. There is no direct, deep integration of IAM systems. Instead, each cloud provider maintains its own identity and access management:
Oracle IAM: Manages access to the Exadata infrastructure, databases, and other resources within the OCI environment (the "OCI pod").
Google Cloud IAM: Manages access to Google Cloud resources like Compute Engine, VPCs, and other services.
Users will typically have separate credentials and identities for each environment. This separation maintains clear boundaries of responsibility and control

NEW QUESTION # 61
What is the primary purpose of the MySQL Database Service HeatWave option in Oracle Cloud Infrastructure (OCI)?

- A. To provide a distributed in-memory query accelerator
- B. To enable seamless database migration from on-premises to OCI
- C. To ensure high availability and fault tolerance
- D. To offer a serverless MySQL deployment

Answer: A

Explanation:
HeatWave in OCI's MySQL Database Service is a distributed in-memory query accelerator, enhancing analytical query performance for MySQL workloads. It's not primarily for migration (Option B), HA (Option C), or serverless deployment (Option D), though it integrates with HA features. Oracle's HeatWave documentation highlights its in-memory acceleration focus.

NEW QUESTION # 62
......

The world is changing rapidly and the requirements to the employees are higher than ever before. If you want to find an ideal job and earn a high income you must boost good working abilities and profound major knowledge. Passing 1Z0-1151-25 certification can help you realize your dreams. If you buy our product, we will provide you with the best 1Z0-1151-25 Study Materials and it can help you obtain 1Z0-1151-25 certification. Our product is of high quality and our service is perfect.
