If you are really not sure which version you like best, you can also apply for multiple trial versions of our C_ACDET_2506 exam questions. We want our customers to make sensible decisions and stick to them. C_ACDET_2506 study engine can be developed to today, and the principle of customer first is a very important factor. C_ACDET_2506 Training Materials really hope to stand with you, learn together and grow together.

SAP C_ACDET_2506 Exam Syllabus Topics:

Topic	Details
Topic 1	Field Configuration: This domain evaluates the knowledge of an SAP Deployment Specialist and focuses on customizing and configuring business fields in the SAP system according to client-specific needs. This includes adjusting system settings for master data, transaction data, and other essential field-level controls to support business processes effectively. The section tests the candidate's ability to use configuration tools, apply SAP standard templates, and ensure that the field configurations align with the desired operational workflows of the business. It also touches upon validation, testing, and documenting the configuration changes made during the implementation.

Topic 2	• Deploy and Migration: This part of the exam assesses the expertise of an SAP Deployment Specialist and focuses on the final deployment of the configured solution and the data migration process. Candidates should demonstrate a solid grasp of how to move configurations from a testing environment into production while minimizing disruption. It also includes knowledge of tools and strategies used for data extraction.
Topic 3	• Project Overview, Roles and Responsibilities: This section of the exam measures the skills of an SAP Cloud Consultant and covers the fundamental understanding of SAP Activate methodology within the context of a cloud implementation project. Candidates are expected to be familiar with the project lifecycle, including phases such as Prepare, Explore, Realize, Deploy, and Run. This part also focuses on identifying key roles and responsibilities within a cloud project team, ensuring clarity in collaboration between consultants, clients, and SAP. It checks whether the consultant understands governance, stakeholder management, and the high-level structure of cloud deployment using SAP best practices.

C_ACDET_2506 Desktop Practice Exam Software

Boring life will wear down your passion for life. It is time for you to make changes. Our C_ACDET_2506 study materials are specially prepared for you. In addition, learning is becoming popular among all age groups. After you purchase our C_ACDET_2506 study materials, you can make the best use of your spare time to update your knowledge. When your life is filled with enriching yourself, you will feel satisfied with your good change. Our C_ACDET_2506 Study Materials are designed to stimulate your interest in learning so that you learn in happiness.

SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q30-Q35):

NEW QUESTION # 30

In a Greenfield deployment scenario, how should translation migrations be performed for header field labels, help tips, and validity condition error messages?

- A. Create a package to migrate translations by ICM.
- B. User with Partner Administrator can configure translation.
- C. Contact an SAP Deployment lead for customization help.
- **D. Translations are included in migrations and are listed as AMLStringResource in the migration**

Answer: D

NEW QUESTION # 31

During a Bluefield migration, you discover missing flex master data templates. What do you do?

- **A. Rebuild them manually in production**
- B. Ignore them
- C. Use reporting workaround
- D. Defer to post-go-live

Answer: A

Explanation:

In a Bluefield deployment scenario, SAP Ariba requires that all Flex Master Data (FMD) templates and their associated data be present in the Production environment before migrating related configuration elements. If you find missing FMD templates during migration, the recommended approach is to manually recreate the missing templates in Production and load the relevant data. This is essential to maintain integrity because many custom fields depend on these templates, and missing templates can cause migration failures or broken references. Deferring or ignoring the issue risks operational disruptions and data inconsistencies. Reporting workarounds do not address template dependencies and therefore are ineffective. This aligns with SAP's guidance on master data migration within Bluefield scenarios to ensure successful, error-free deployments.

NEW QUESTION # 32

You can choose multiple field configurations and migrate them to the production site by creating a package in your test site. Which of the following steps should be included? Note: There are 3 correct answers to this question.

- A. Discard any other packages that appear in My Action Items.
- B. Make sure you update the string resource files in the production site before migrating the corresponding field configurations from test to production site.
- C. Publish the form template within the test site in order to add the form fields in the package.
- D. The Flex Master Data (FMD) templates must be defined and their data should be loaded in the production site before migrating FMD custom fields.
- E. If you are migrating fields that are associated with enumerations, you should load those enumerations in the production site before migrating the fields.

Answer: B,D,E

NEW QUESTION # 33

While working on editing a field for a customer, you notice that "Editable in full Contract Amendment" is not an option available in the advanced tab of field configuration. What is likely the cause for this behavior? (Select 2 correct answers)

- A. The field you are customizing is standard and therefore cannot be changed.
- B. The field you are customizing is not in the contract workspace or request classes.
- C. The contract must be in an amendment state for this option to be visible in customizing.
- D. A customization is in flight and needs to be cleared and reset prior to making this change.

Answer: B,C

Explanation:

The "Editable in full Contract Amendment" option in SAP Ariba is available only when the contract is in an amendment status, meaning this option appears contextually when the contract supports amendment workflows. If the contract is not in amendment state, the option remains hidden (A).

Additionally, this option is only relevant for fields that belong to the Contract Workspace or Request field classes; fields outside these classes will not show amendment-specific editability options (C).

The presence or absence of this option is not related to ongoing customizations needing reset (B), nor is it restricted solely to custom or standard fields (D), as standard fields can also have this option if class- applicable.

NEW QUESTION # 34

If you add a custom field to the ContractWorkspace class, which other class(es) will that field be added to?

- A. SalesContractRequest and InternalContractRequest
- B. Internal ContractWorkspace and SalesContractWorkspace
- C. ContractRequest
- D. AbstractContractWorkspace

Answer: B

NEW QUESTION # 35
