Topic 4	<ul style="list-style-type: none">Quality Planning: The topic explains the configuration requirements of Quality Planning.
Topic 5	<ul style="list-style-type: none">Quality Management in Sales and Distribution: The topic describes the integration of QM with Sales and Distribution.

SAP Certified Associate - SAP S/4HANA Cloud Private Edition, Quality Management Sample Questions (Q66-Q71):

NEW QUESTION # 66

In the material master, at which organizational level do you assign a Catalog Profile?

- A. Business area level
- B. Company code level
- C. Client level
- **D. Plant level**

Answer: D

Explanation:

The catalog profile in the material master determines the set of codes available for quality processes like defect recording or usage decisions. Its assignment occurs at a specific organizational level:

* Plant Level (D): In the material master (transaction MM01/MM02), the catalog profile is assigned in the Quality Management view under the "Inspection Setup" section (field QMAT-PROF). This is done at the plant level because QM processes (e.g., inspections) are plant-specific, and the catalog profile must align with the plant's quality requirements. This is standard SAP behavior, ensuring flexibility across different plants for the same material.

* Company Code Level (A): QM settings are not managed at the company code level, as this is a financial organizational unit unrelated to inspection processes.

* Client Level (B): Client-level settings are too broad and apply globally, whereas catalog profiles need plant-specific granularity.

* Business Area Level (C): Business areas are used for financial reporting, not QM organizational assignments.

Thus, "Plant level" is the correct answer, reflecting SAP's organizational structure for QM data. References:

SAP Help Portal - "Material Master in QM"; SAP S/4HANA QM User Guide - "QM View in Material Master".

NEW QUESTION # 67

You want to transfer an inspection result to a batch characteristic value. What is a prerequisite for inspection planning?

- A. Assignment of an inspection method to the inspection characteristic
- B. Assignment of an inspection characteristic to the inspection specification
- C. Assignment of a class characteristic to the inspection specification
- **D. Assignment of a class characteristic to a master inspection characteristic**

Answer: D

Explanation:

Transferring inspection results to a batch characteristic in SAP QM (e.g., during results recording) requires linking QM and batch management (LO-BM). The prerequisite in inspection planning is:

* Assignment of a Class Characteristic to a Master Inspection Characteristic (B): To transfer results, the MIC (transaction QS21) must be linked to a class characteristic (transaction CT04) used in the batch class (transaction CL01). This is configured in the MIC by assigning the class characteristic, enabling the system to update batch values (e.g., potency) from inspection results. This is a standard prerequisite (SPRO > Quality Management > Inspection Planning > Basic Data > MIC).

* Assignment of a Class Characteristic to the Inspection Specification (A): Inspection specifications (e.g., material specs) don't directly link to class characteristics for this purpose; the link is via MICs.

* Assignment of an Inspection Characteristic to the Inspection Specification (C): This refers to planning setup but doesn't address batch transfer specifically.

* Assignment of an Inspection Method to the Inspection Characteristic (D): Methods guide execution, not batch value transfer.

Thus, "Assignment of a class characteristic to a master inspection characteristic" is the correct answer.

References: SAP Help Portal - "Batch Management Integration with QM"; SAP S/4HANA QM User Guide - "Results Recording".

NEW QUESTION # 68

You create a supplier claim notification with reference to material document year, number and item from a goods receipt for the PO. What information is copied to the notification?

Note : 3 correct answer

- A. Purchasing document number and item
- B. Quantity and unit
- C. Material number
- D. Advanced Shipping number
- E. Inspection lot number

Answer: A,B,C

NEW QUESTION # 69

Which of the following are prerequisites for the creation of an inspection lot for an outbound delivery item?

Note: There are 2 correct answers to this question.

- A. The relevant inspection type is active in the material
- B. An inspection lot origin is assigned to a delivery type in customizing
- C. QM is active in the relevant movement type
- D. QM is active in the quality info record: SD

Answer: A,B

Explanation:

For an inspection lot to be created for an outbound delivery item (e.g., inspection type 10):

* An Inspection Lot Origin is Assigned to a Delivery Type in Customizing (B): In Customizing (SPRO > QM > Quality Inspection > Inspection Lot Creation > Maintain Inspection Lot Origins and Assign Inspection Types), the delivery type (e.g., LF for outbound) must be linked to an inspection lot origin (e.g., 10). This ensures the system triggers a lot during delivery creation (VL01N).

* The Relevant Inspection Type is Active in the Material (C): Inspection type 10 must be activated in the material master's QM view (transaction MM01/MM02) for the plant, enabling QM for outbound deliveries.

* QM is Active in the Relevant Movement Type (A): Movement types (e.g., 601 for goods issue) trigger stock postings, not inspection lots directly in outbound scenarios.

* QM is Active in the Quality Info Record: SD (D): The quality info record: SD (transaction QVDM) defines inspection requirements but isn't a prerequisite for lot creation; it refines the process.

Thus, "B" and "C" are the correct answers. References: SAP Help Portal - "Inspection Lots for Deliveries"; SAP S/4HANA QM Customizing Guide - "Inspection Lot Origins".

NEW QUESTION # 70

Your customer wants to determine a critical defect class

Which of the following functions are possible during results recoding?

Correct 2 ans

- A. Active a quality notification
- B. Trigger a subsequent inspection lot
- C. Trigger a workflow
- D. Tighten the quality level

Answer: A,C

NEW QUESTION # 71
