## Popular Fire-Inspector-II Exam Materials Can Help You Pass the Exam Successful - UpdateDumps

The price for Fire-Inspector-II exam torrent are reasonable, and no matter you are a student at school or an employee in the enterprise, you can afford the expense. In addition, Fire-Inspector-II exam dumps are reviewed by skilled professionals, therefore the quality can be guaranteed. We offer you free demo to have a try before buying Fire-Inspector-II Exam Torrent from us, so that you can know what the complete version is like. Free update for one year is available, and the update version will be sent to your email address automatically.

## International Code Council 67 - Fire Inspector II Exam Sample Questions (Q87-Q92):

### NEW QUESTION # 87

A Type I handrail that is not circular shall have a minimum perimeter dimension of \_\_\_ inches.

- A. 1.25
- B. 6.25
- C. 0

- D. 1

**Answer: B**

Explanation:

According to the 2021 International Fire Code (IFC) and the International Building Code (IBC) Section 1014.3, handrails are categorized into Type I and Type II based on their shape and size requirements.

Type I handrails refer to those that are not circular in shape but still comply with graspability requirements. IBC Section 1014.3.1 states that:

If a handrail is not circular, it must have a perimeter dimension between 4 inches (minimum) and 6.25 inches (maximum). The cross-section of such a handrail should provide an adequate grasping surface.

**NEW QUESTION # 88**

What is the occupant load of a 2,500 net square foot assembly occupancy using tables and chairs?

- A. 0
- B. 1
- C. 2
- D. 3

**Answer: D**

Explanation:

Reference to Occupant Load Factor Calculations:

The International Fire Code (IFC 2021), Table 1004.5 provides occupant load factors for different types of occupancies.

For assembly occupancy with tables and chairs, the occupant load factor is 15 square feet per person (net area).

Calculation of Occupant Load:

Formula: Occupant Load=Net Square Footage Occupant Load Factor\text{Occupant Load} = \frac{\text{Net Square Footage}}{\text{Occupant Load Factor}} Occupant Load=Occupant Load Factor Net Square Footage Given: 2,500 net square feet, with a load factor of 15 sq. ft. per person:  $2500/15=166.67$ #167 occupants\frac{2500}{15}=166.67 \approx 167 \text{ occupants}

$152500=166.67/167 \text{ occupants}$  Clarification of Incorrect Answer Choices:

A: 167 # Correct

Matches the exact IFC Table 1004.5 calculation.

B: 227 # Incorrect

Would correspond to a lower load factor (about 11 sq. ft. per occupant), which is not the standard for tables and chairs.

C: 357 # Incorrect

Would correspond to a 7 sq. ft. per occupant factor, used for tighter seating arrangements (e.g., assembly without fixed seats).

D: 500 # Incorrect

Would correspond to a 5 sq. ft. per occupant factor, typically used for standing areas or dense seating arrangements.

Conclusion:

The correct and verified answer is A (167 occupants) based on IFC Table 1004.5, using the standard occupant load factor for assembly occupancies with tables and chairs.

**NEW QUESTION # 89**

In the fire code, ABS plastics are designated as \_\_\_\_ plastic materials.

- A. Group C
- B. Commodity Class III
- C. Group B
- D. Group A

**Answer: D**

Explanation:

IFC Section 2303.7 classifies ABS (acrylonitrile butadiene styrene) plastics as Group A (high-hazard) due to their flammability and smoke production, per NFPA 13. Options B and C are less hazardous, D is a commodity class, not a plastic group. Thus, A is correct.

### NEW QUESTION # 90

Refrigeration units or systems having a refrigerant circuit containing Group A1 refrigerant shall be provided with approved emergency signs, charts, and labels in accordance with NFPA 704 when the quantity exceeds \_\_\_\_\_ lb.

- A. 0
- B. 1
- C. 2
- D. 3

**Answer: D**

Explanation:

Refrigeration systems and units are regulated under IFC 2021, Section 605 - Refrigeration Equipment, and the requirement for emergency signs, charts, and labels is tied to the NFPA 704 Hazardous Materials Identification System.

IFC 2021, Section 605.12.3 - Signage for Refrigeration Systems:

States that approved emergency signs, charts, and labels must be provided when the refrigerant quantity exceeds 220 pounds for Group A1 refrigerants.

Definition of Group A1 Refrigerants (Low Toxicity, Low Flammability):

Examples include R-134a, R-410A, and R-22, which are commonly used in commercial and industrial HVAC systems.

Why Other Options Are Incorrect?

A: 30 lb. - Too low; labeling requirements do not apply at this threshold.

B: 100 lb. - Incorrect; the IFC requirement specifies 220 lb.

C: 200 lb. - Close, but still below the 220 lb. threshold.

### NEW QUESTION # 91

Foamed plastics or materials containing foamed plastics used for stage scenery must be approved when tested in accordance with

- A. UL 1975
- B. NFPA 11A
- C. CPSC 16CFR
- D. ASTM D 1784

**Answer: A**

Explanation:

Foamed plastics or materials containing foamed plastics used for stage scenery must meet strict fire performance requirements to prevent rapid flame spread and fire hazards in assembly occupancies.

The correct fire test standard for these materials is UL 1975 - Standard for Fire Tests for Foamed Plastics Used for Decorative Purposes.

Reference to Fire Inspector Documentation:

1. 2021 International Fire Code (IFC) - Section 807.4.2 (Foamed Plastics for Stage Scenery) IFC 807.4.2 states that foamed plastics used in scenery must be tested and approved per UL 1975 to ensure fire safety.

2. UL 1975 - Standard for Fire Tests for Foamed Plastics Used for Decorative Purposes This standard evaluates the flammability and smoke production of foamed plastics used in decorative applications, including stage scenery.

Detailed Explanation of Answer Choices:

Option A (Correct): UL 1975 is the required test standard for foamed plastics used in stage scenery, ensuring compliance with IFC 807.4.2.

Option B (Incorrect): NFPA 11A deals with foam-water fire suppression systems, not foamed plastics for decorative use.

Option C (Incorrect): CPSC 16CFR relates to consumer product safety regulations but does not address fire safety for foamed plastics on stage scenery.

Option D (Incorrect): ASTM D 1784 is a test for rigid PVC plastics and does not apply to foamed plastics used for stage scenery. Thus, the correct and verified answer is: A. UL 1975.

### NEW QUESTION # 92

.....

Because they are immensely useful and help you gain success in a Fire-Inspector-II certification exam. More than ever, the professionals are now facing a highly competitive world to get their talent recognized enhancing their positions in their work

environment. Such a milieu demands them to enrich their candidature more seriously. So the professionals work hard to maintain their quality and never fail in doing so. UpdateDumps Fire-Inspector-II Certification exams are the best option for any ambitious and ardent professional to make his continuation in his area of work intact.

**Test Fire-Inspector-II Vce Free:** <https://www.updatedumps.com/International-Code-Council/Fire-Inspector-II-updated-exam-dumps.html>

The free demo is a part of our real Test Fire-Inspector-II Vce Free - 67 - Fire Inspector II Exam latest Pass4sures questions, and in the demo you will have access to get a rough idea of our Test Fire-Inspector-II Vce Free - 67 - Fire Inspector II Exam valid study vce, what's more, you will be able to get to know what it is look like after opening the software as well as the usage of our software, Our Fire-Inspector-II practice prep dump is definitely a better choice to help you go through the Fire Inspector Fire-Inspector-II actual test.
