

Certification NS0-005 Questions - Latest NS0-005 Exam Review

Free update for NS0-005 Study Guide materials are available, that is to say, in the following year, you can get the latest information about the NS0-005 exam dumps without spending extra money. In addition, NS0-005 study guide of us is compiled by experienced experts, and they are quite familiar with the dynamics of the exam center, so that if you choose us, we can help you to pass the exam just one time, in this way, you can save your time and won't waste your money. We also have online and offline chat service stuff, if any other questions, just contact us.

You will need to pass the NetApp Technology Solutions Professional Exam (NS0-005) exam to achieve the Network Appliance NS0-005 certification. Due to extremely high competition, passing the Network Appliance NS0-005 exam is not easy; however, possible. You can use Lead2Passed products to pass the NS0-005 Exam on the first attempt. The Network Appliance practice exam gives you confidence and helps you understand the criteria of the testing authority and pass the NetApp Technology Solutions Professional Exam (NS0-005) exam on the first attempt.

Updated Network Appliance - NS0-005 - Certification NetApp Technology Solutions Professional Exam Questions

The competition in IT industry is increasingly intense, so how to prove that you are indispensable talent? To pass the NS0-005 certification exam is persuasive. What we can do for you is to let you faster and more easily pass the NS0-005 Exam. Our Lead2Passed have owned more resources and experiences after development for years. Constant improvement of the software also can let you enjoy more efficient review process of NS0-005 exam.

Network Appliance NetApp Technology Solutions Professional Exam Sample Questions (Q20-Q25):

NEW QUESTION # 20

Which NetApp data management tool provides the digital advisor that simplifies the proactive care and optimization of NetApp storage?

- A. Active IQ
- B. ONTAP System Manager
- C. BlueXP observability
- D. BlueXP classification

Answer: A

Explanation:

Active IQ is a digital advisor that simplifies the proactive care and optimization of NetApp storage. Fueled by telemetry data from a highly diverse installed base, it uses advanced AI and ML techniques to uncover opportunities to reduce risk and improve the performance and efficiency of your storage environment¹. Active IQ provides you with visibility and insights required to maintain storage health, reduce time spent on storage operations, lower storage costs and improve efficiency². Active IQ also integrates with ONTAP System Manager to provide a unified management experience³.

NEW QUESTION # 21

What are the two node types within a Kubernetes cluster? (Choose two.)

- A. controller
- B. backup
- C. master
- D. worker
- E. storage

Answer: C,D

Explanation:

A). Worker: Worker nodes are the machines (physical or virtual) where the containerized applications (managed by pods) run. Each worker node is managed by the master nodes and contains the necessary services to run pods, including the Docker runtime and the Kubelet.

E). Master: Master nodes (also known as control plane nodes) manage the state of the Kubernetes cluster. They make global decisions about the cluster (like scheduling), as well as detecting and responding to cluster events (like starting up a new pod when a deployment's replicas field is unsatisfied). The master node's components include the Kubernetes API Server, scheduler, etcd, controller manager, and more.

NEW QUESTION # 22

Which NetApp tool enables customers to monitor, troubleshoot, and optimize all of their NetApp resources in both public clouds and private data centers?

- A. ONTAP System Manager
- B. Active IQ Unified Manager
- C. BlueXP observability
- D. BlueXP copy and sync

Answer: C

Explanation:

BlueXP observability is a NetApp tool that enables customers to monitor, troubleshoot, and optimize all of their NetApp resources in both public clouds and private data centers. It is a cloud-based service that provides comprehensive real-time data visualization of the topology, availability, performance, and utilization of all the infrastructure, including both cloud and on-premises multivendor resources. It also offers advanced analytics, alerting, and anomaly detection capabilities to help customers identify and resolve issues, optimize costs, and improve service levels.

NEW QUESTION # 23

Which feature does StorageGRID use to distribute copies of object data?

- A. storage lifecycle management (SLM)
- **B. information lifecycle management (ILM)**
- C. application lifecycle management (ALM)
- D. object lifecycle management (OLM)

Answer: B

Explanation:

Information lifecycle management (ILM) is a feature of StorageGRID that enables you to create and apply policies that determine how objects are stored, replicated, protected, and distributed across the grid and public clouds. ILM policies can also specify how long objects are retained, when they are deleted, and how they are encrypted. ILM policies are based on object metadata, such as bucket name, object name, size, or custom tags. ILM policies help you optimize the performance, availability, durability, and cost of your object storage.

NEW QUESTION # 24

What are two benefits of configuring Advanced Disk Partitioning (ADP) on an AFF or FAS system? (Choose two.)

- A. increased disk performance
- **B. optimized storage capacity**
- C. increased deduplication efficiencies
- D. decreased disk failure rate
- **E. reduced RAID parity overhead**

Answer: B,E

Explanation:

Advanced Disk Partitioning (ADP) is a feature that enables ONTAP to partition a disk into multiple logical units and use them for different purposes.

ADP has two main benefits for AFF or FAS systems:

- It optimizes storage capacity by reducing the number of disks required for the root aggregates, which store the system and configuration data. By using ADP, the root aggregate can share the same disk with a data aggregate, which stores the user data. This frees up more disks for data aggregates and increases the usable space for data.
- It reduces RAID parity overhead by creating smaller RAID groups with partitions instead of whole disks. This reduces the amount of parity data that needs to be written and read, which improves the performance and efficiency of the system.
