Fortinet NSE 6 - FortiSwitch 7.2 Sample Questions (Q28-Q33):

NEW QUESTION # 28

Which statement about the quarantine VLAN on FortiSwitch is true?

- A. Quarantine VLAN has no DHCP server
- **B. It is only used for quarantined devices if global setting is set to quarantine by VLAN.**
- C. Users who fail 802.1X authentication can be placed on the quarantine VLAN.
- D. FortiSwitch can block devices without configuring quarantine VLAN to be part of the allowed VLANs.

Answer: B

NEW QUESTION # 29

Exhibit.

Port	Device Information	DHCP Snooping
Port 23	Serial Number: 5476DB1770800002	Untrusted
Port 24	Serial Number: 5C857E3214A2	Untrusted

The exhibit shows the current status of the ports on the managed FortiSwitch.

Access-1.

Why would FortiGate display a serial number in the Native VLAN column associated with the port23 entry?

- A. A standalone switch with the shown serial number is connected on port23.
- B. Port23 is configured as the dedicated management interface.
- **C. Ports connect to adjacent FortiSwitch devices will show their serial number as the native VLAN**
- D. Port23 is a member of a trunk that uses the Access-1 FortiSwitch serial number as the name of the trunk.

Answer: C

NEW QUESTION # 30

Which two types of Layer 3 interfaces can participate in dynamic routing on FortiSwitch? (Choose two.)

- **A. Switch virtual interfaces**
- B. Physical interfaces
- **C. Loopback interfaces**
- D. Detected management interfaces

Answer: A,C

Explanation:

In dynamic routing on FortiSwitch, certain types of interfaces are utilized to participate in the routing processes. The types of interfaces that can be used include:

Loopback Interfaces (B):

Loopback interfaces are virtual interfaces that are always up, making them ideal for use in routing protocols where a stable interface is necessary. They are commonly used to establish router IDs and manage routing information more reliably.

Switch Virtual Interfaces (C):

Switch Virtual Interfaces (SVIs) are assigned to VLANs and can have IP addresses assigned to them, making them capable of participating in Layer 3 routing. SVIs are essential for routing between different VLANs on a switch and can participate in dynamic routing protocols to advertise networks or make routing decisions.

Physical Interfaces (D) and Detected Management Interfaces (A) are not typically used directly by dynamic routing protocols for their operations in the context of FortiSwitch.

Reference:

For more information on how these interfaces interact with dynamic routing protocols, you can check the FortiSwitch documentation on Fortinet's official documentation site: [Fortinet Product Documentation](#)

NEW QUESTION # 31

How does FortiGate handle configuration of flow tracking sampling if you export the settings to a managed FortiSwitch stack with sampling mode set to perimeter is true?

- A. FortiGate configures and enables flow sampling on FortiSwitch but does not change existing sampling settings of interfaces.

- B. FortiGate configures FortiSwitch to perform ingress sampling on all switch interfaces.
- C. FortiGate configures and enables egress sampling on all management interfaces.
- D. FortiGate configures FortiSwitch to perform ingress sampling on all switch interfaces, except ICL and ISL interfaces.

Answer: D

Explanation:

When FortiGate exports configuration settings to a managed FortiSwitch stack with sampling mode set to "perimeter is true," the behavior is:

B. FortiGate configures FortiSwitch to perform ingress sampling on all switch interfaces, except ICL and ISL interfaces. This setting ensures that all incoming traffic on normal operational ports is sampled for monitoring and analysis purposes, but it excludes the inter-chassis link (ICL) and inter-switch link (ISL) interfaces from sampling. These exclusions are typically made to prevent the duplication of sampled data and to reduce unnecessary load on the monitoring system, as these links often carry traffic already monitored at other points.

Options A and D are incorrect because they either generalize the sampling across all interfaces without exceptions or incorrectly specify egress sampling on management interfaces. Option C is also incorrect as FortiGate can modify existing sampling settings to fit the perimeter-based configuration requirement.

NEW QUESTION # 32

What are two ways in which automatic MAC address quarantine works on FortiSwitch? (Choose two.)

- A. FortiGate applies the quarantine-related configuration only on FortiGate.
- B. MAC address quarantine can be enabled through the FortiGate CLI only.
- C. FortiAnalyzer with a threat detection services license is required.
- D. FortiSwitch supports only by VLAN quarantine mode.

Answer: B,C
