As far as the top features of PassCollection NCS-Core exam questions formats are concerned, the Nutanix NCS-Core desktop practice test software and web-based practice test software both are customizable and track your performance. These NCS-Core practice tests are specifically designed to give you a real-time NCS-Core Exam environment for preparation. You can trust both NCS-Core practice test software and start preparing today. The desktop software runs on Windows computers. The web-based NCS-Core practice exam is supported by all browsers and operating systems.

The Nutanix NCS-Core Exam Syllabus covers a broad range of topics, including Nutanix Core Infrastructure installation, configuration, and management, as well as network and storage administration. NCS-Core exam also covers virtualization concepts and best practices, including the use of VMware vSphere and Microsoft Hyper-V. Additionally, the exam assesses the candidates' knowledge of system monitoring, performance tuning, and troubleshooting techniques.

Useful Certification NCS-Core Dump for Real Exam

Just only dozens of money on Nutanix NCS-Core latest study guide will assist you pass exam and 24-hours worm aid service. These Nutanix NCS-Core test questions will help you secure the Nutanix NCS-Core credential on the first attempt. We are aware that students face undue pressure during the Nutanix NCS-Core certification exam preparation.

Nutanix Certified Services Core Infrastructure Professional Sample Questions (Q12-Q17):

NEW QUESTION # 12

An administrator of a Nutanix Enterprise Cloud has microsegmentation enabled and a firewall VM installed.

The security team notifies the administrator that one of the VMs hosted in the environment has been exhibiting suspect network activity. The administrator wants to isolate the VM from the production network, but must still be able to access it to perform diagnostics.

What should the administrator do to meet the requirement?

- A. Create a firewall rule that blocks VM traffic but permits diagnostic access

- B. Disable the vNIC on the affected VM
- C. Create a security policy with a service chain directing that VMs traffic to the firewall VM
- D. Quarantine the VM using the Forensic Method

Answer: D

Explanation:

Explanation

Ref: <https://portal.nutanix.com/page/documents/kbs/details?targetId=kA00e000000LlclCAG>

Nutanix flow – Quarantine security policy

Quarantine policy in Nutanix flow is predefined and build into the product. You cannot modify it or change it or create a new quarantine policy.

Quarantine policy in Nutanix Flow has two methods:

- Forensic – VM cannot talk to anything in the network, except to the specific forensic tools configured in the policy
- Strict – VM cannot talk to anything in the network

NEW QUESTION # 13

A customer recently set up Async Replication between Site A and Site B.

The customer wants to conduct a planned failover and clicks Activate on Site B.

The customer then runs the following command on Site A:

```
ncli pd deactivate_and_destroy_vms name=<protection_domain_name>
```

What does this do to the customer environment?

- A. VMs get deleted from Site B. and the protection domain is now Active.
- B. Customer must then manually power off VMs at Site A and power them on at Site B.
- C. VMs are powered off on Site A and must be manually powered on at Site B.
- D. VMs get deleted from Site A and the protection domain is no longer active.

Answer: D

Explanation:

Explanation

https://portal.nutanix.com/page/documents/details?targetId=Web-Console-Guide-Prism-v5_10:wc-protection-do

```
<ncli> pd deactivate_and_destroy_vms name=DataProtection
Use this command only when you are preparing to do a failback from an unplanned
failover. Executing this command will delete the VMs from this site and might ca
use data loss when used incorrectly. Are you sure (y/N)? Error: Mode change for
protection domain DataProtection failed with error: Cannot deactivate protection
domain DataProtection because 1 VM(s) (POC_DEMO) are Powered ON
```

NEW QUESTION # 14

After installation, network ports are properly configured with the default active-backup bonding.

One 10GbE port goes to switch 1. Another 10GbE port goes to switch 2. A consultant tests failover by manually pulling one of the cables and notices it is taking too much time to failover, which is causing excessive packet loss.

What should the consultant enable to resolve this issue?

- A. LACP on switch
- B. Jumbo frames
- C. Portfast
- D. PAgP

Answer: C

NEW QUESTION # 15

An administrator has an existing Nutanix seven-node cluster running at RF2 that must be changed to have the following capabilities:

* RF3 set for the cluster

* Performance tier deduplication

What is the minimum memory needed on the CVMs to allow for these capabilities?

- A. 20G?
- **B. 28GB**
- C. 32GB
- D. 24GB

Answer: B

Explanation:

Ref:

<https://next.nutanix.com/how-it-works-22/rf2-rf3-requirements-37206#:~:text=Controller%20VMs%20must%20>

NEW QUESTION # 16

After a recent installation using a flat switch, a consultant notices issues migrating the Nutanix nodes to the customer's network. The customer states that they are using VLANs on the production switch but not on the dedicated switch for IPMI. The customer does not require a manual configuration of the host and CVM.

What network changes need to be made to correct the issues?

- A. Use Native VLANs for the CVM and host and trunk mode for IPMI.
- **B. Use tagged VLANs for the CVM and host and access mode for IPMI.**
- C. Use untagged VLANs for the CVM and host and trunk mode for IPMI.
- D. Use Native VLANs for the CVM and host and access mode for IPMI.

Answer: B

Explanation:

The proper network configuration to solve the described issue involves using tagged VLANs for the CVM (Controller Virtual Machine) and host, allowing these components to correctly interact with the customer's VLAN-configured network. For the IPMI (Intelligent Platform Management Interface), which is used for out-of-band management and does not require connectivity to multiple VLANs, setting it to access mode is appropriate. This configuration ensures that the IPMI only communicates over a single, untagged VLAN, effectively isolating its traffic from the production network.
