Pegasystems Certified Pega Lead System Architecture (LSA) Exam 23 Sample Questions (Q25-Q30):

NEW QUESTION # 25

In a customer onboarding application, cases are routed to multiple work queues depending on the client region in the Verify stage. At the entry of this stage, multiple API calls are invoked to calculate the risk level of the customer. The routing to multiple work queues is performed by using a decision table.

But the business changes and multiple departments are merged into new departments. The business now wants to replace existing work queues and realign to the new departments.

Which two of the following options must be performed to meet the new requirement for new cases and in-flight cases? (Choose Two)

- A. Create new work queues for the new departments and update the step by referring the routing activity ToWorkbasket to route the cases to the new work queue; this works for new cases. For in-flight cases, create a custom activity for routing to new work queues.
- B. For in-flight cases, create a custom activity to assign work to new work queues.
- C. Create new work queues for the new departments, and update the step by referring to a decision tree and route the cases to the new work queue; this works for new cases. For in-flight cases, create a custom activity for routing to new work queues.
- D. Create a custom routing activity and refer to this activity in the assignment shape for the new cases.
- E. Create new work queues for the new departments, and update the decision table with the new work queue names for new cases.
