Pdf Tableau SCA-C01 Files, SCA-C01 Top Questions

Owing to our high-quality SCA-C01 real test and high passing rate, our company has been developing faster and faster and gain good reputation in the world. Our education experts are adept at designing and researching exam questions and answers of SCA-C01 study torrent. What's more, we can always get latest SCA-C01 exam information resource. We have unique advantages on study guide materials. Our high passing rate is the leading position in this field. We are the best choice for candidates who are eager to pass exams and acquire the certifications. Our SCA-C01 Actual Exam will be definitely conducive to realizing the dream of obtaining the certificate.

Tableau Server Certified Associate Exam Sample Questions (Q141-Q146):

NEW QUESTION # 141

Which of the following IS NOT a recommended course of action when investigating Tableau Server issues with respect to log files?

- A. Create an archive of the logs
- B. Set the initial logging level at the most granular detail always to collect more data points
- C. Clean up existing log files to reduce their size
- D. Review the TSM Administration Controller log
- E. Reproduce the issue you are troubleshooting so the logs capture the events related to the problem

Answer: B

Explanation:

Explanation

Link to Tableau Server documentation:

https://help.tableau.com/current/server/en-us/logs_working_with.htm

NEW QUESTION # 142

True or False: The Explorer site role can browse and interact with views and open the web authoring environment to implement changes in the view, but they cannot save their work

- A. TRUE
- B. FALSE

Answer: A

Explanation:

Explanation

Link to Tableau Server documentation: https://help.tableau.com/current/server/en-us/users site roles.htm

NEW QUESTION # 143

Which command should you run to enable the Tableau Metadata API for Tableau Server?

- A. tsm maintenance metadata-api enable
- B. tsm maintenance metadata-services enable
- C. tsm maintenance metadata-services-api enable

Answer: B

Explanation:

Explanation

Link to Tableau Server documentation:

https://help.tableau.com/current/server/en-us/cli_maintenance_tsm.htm#tsm-maintenance-metadataservices-enab

NEW QUESTION # 144

Which three types of authentications can be used with user-based licensing? (Choose three.)

- A. Active Directory
- B. Trusted authentication
- C. Reliance authentication
- D. Local authentication

Answer: A,B,D

Explanation:

Tableau Server'suser-based licensing(Creator, Explorer, Viewer) ties licenses to individual users-let's determine compatible authentication methods:

- * User-Based Licensing:
- * Licenses are assigned per user, tracked by username.
- * Authentication determines how users log in-must integrate with licensing.
- * Option A (Local authentication): Correct.
- * Details: Users are managed in Tableau Server's internal database-username/password set manually or via import.

- * Why: Directly ties to user accounts, fully compatible with licensing.
- * Option C (Trusted authentication): Correct.
- * Details: Allows external apps to authenticate users via tickets (e.g., /trusted/<ticket>).
- * Why: Maps to Tableau usernames, integrating with licensing-common for embedded analytics.
- * Config. Trusted IPs or credentials set in TSM.
- * Option D (Active Directory): Correct.
- * Details: Uses AD for authentication (LDAP or Kerberos)-users sync to Tableau Server.
- * Why: AD usernames align with licensing-supports SSO and user management.
- * Config: Enable via tsm authentication active-directory configure.
- * Option B (Reliance authentication): Incorrect.
- * Why: Not a recognized Tableau authentication method-likely a typo (e.g., for "Resilience" or misheard term). No such feature exists

Why This Matters: Authentication flexibility ensures user-based licensing fits diverse IT environments- critical for adoption.

NEW QUESTION # 145

Which three items can be contained in a project? (Choose three.)

- A. Nested Projects
- B. Groups
- C. Data Sources
- D. Workbooks

Answer: A,C,D

Explanation:

In Tableau Server, projects are containers for organizing and securing content. They help manage permissions and structure content hierarchically. Let's define what can be contained:

- * Workbooks: Visualizations and dashboards published to the Server.
- * Data Sources: Published connections or extracts reusable across workbooks.
- * Nested Projects: Sub-projects within a parent project, introduced in later versions (e.g., 2018.2) for deeper organization.
- * Option B (Workbooks): Correct. Workbooks are the primary content type in projects, containing views and dashboards.
- * Option C (Nested Projects): Correct. Nested projects allow hierarchical structuring (e.g., a "Sales" project with "Q1" and "Q2" sub-projects), with inherited or custom permissions.
- * Option D (Data Sources): Correct. Published data sources reside in projects, providing reusable data connections.
- * Option A (Groups): Incorrect. Groups are collections of users managed at the site or server level, not stored within projects. Projects contain content, not user entities.

Why This Matters: Projects are key to content governance-knowing what they hold helps administrators organize and secure assets effectively.

NEW QUESTION # 146
