## CWNP Certified Wireless IoT Solutions Administrator(2025 Edition) Sample Questions (Q62-Q67):

### NEW QUESTION # 62

What is the benefit of using SINR as opposed to SNR to reference signal quality at a receiver?

- A. SNR excludes the noise floor, which skews the results
- **B. SINR includes interference as well as the noise floor**
- C. SNR includes interference measurements that skew the results
- D. SINR excludes interference and only measures the noise floor

**Answer: B**

Explanation:

- \* SINR vs. SNR:
  - \* SNR (Signal-to-Noise Ratio): Measures the power of the desired signal relative to background noise.
  - \* SINR (Signal-to-Interference-plus-Noise Ratio): Considers both background noise and interference from other signals operating on the same frequency.
  - \* Practical Importance: SINR is a more realistic indicator of real-world signal quality in wireless environments where interference is a significant factor.
- References
- \* SINR: [https://en.wikipedia.org/wiki/Signal-to-interference-plus-noise\\_ratio](https://en.wikipedia.org/wiki/Signal-to-interference-plus-noise_ratio)
  - \* SNR: [https://en.wikipedia.org/wiki/Signal-to-noise\\_ratio](https://en.wikipedia.org/wiki/Signal-to-noise_ratio)

### NEW QUESTION # 63

What is an advantage of an overlay monitoring system for wireless networks as opposed to an Integrated monitoring system?

- A. An overlay solution functions without disrupting services provided by the wireless network
- B. An overlay solution collects less data so that reporting is more efficient
- C. An overlay solution is less expensive than an integrated solution
- D. An overlay solution does not require power provisioning

**Answer: A**

Explanation:

- \* Overlay vs. Integrated Monitoring:
- \* Overlay: A separate monitoring system independent of the primary wireless infrastructure.
- \* Integrated: Monitoring functions built into wireless access points or controllers.
- \* Overlay Advantage: Since the overlay system is separate, it doesn't add overhead or complexity to the core network, avoiding potential disruption of wireless services.

### NEW QUESTION # 64

What provides the security (encryption) in an HTTPS connection?

- A. IPSec
- B. SSH
- C. SSL/TLS
- D. SNMPv3

**Answer: C**

Explanation:

- \* SSL/TLS Secures Web Traffic: HTTPS builds upon HTTP, adding the encryption provided by Secure Sockets Layer (SSL) or its successor, Transport Layer Security (TLS).
- \* Other Protocols Have Different Purposes:
- \* IPSec: Secures IP traffic at a network level, can be used alongside TLS.
- \* SNMPv3: Management protocol, offers security features, but not the primary mechanism in HTTPS.
- \* SSH: Secure remote shell, unrelated to web data encryption.

References:

TLS (and SSL): Explanations of their role in HTTPS and how they provide encryption for web communication.  
 HTTPS Overview: Materials showing how TLS fits into the overall HTTPS architecture.

### NEW QUESTION # 65

You are performing an implementation for a cloud-based wireless solution. How is connectivity to the cloud established? (Choose the single best answer.)

- A. Through any Layer 3 network connected to the Internet
- B. Through the use of IPX/SPX routers
- C. Through cellular Internet connections only
- D. Through BLE Layer 2 connections that do not use IP

**Answer: A**

Explanation:

\* Cloud Connectivity Relies on IP: Most cloud-based services operate via the internet, which utilizes Internet Protocol (IP) at Layer 3 of the network model.

\* Flexibility: Various Layer 2 technologies (Ethernet, Wi-Fi) can connect to a Layer 3 network that ultimately provides Internet access.

\* BLE Exception: Bluetooth Low Energy can have cloud connectivity, but often through gateways and not as a direct Layer 2 connection.

\* Eliminating Incorrect Options: IPX/SPX is an outdated protocol, and cellular is only one possible way to achieve Internet access.

OSI Model: Descriptions of Network Layers, especially Layer 2 (Data Link) and Layer 3 (Network).

Cloud Architecture: Diagrams showing how devices commonly access cloud resources through internet-based infrastructures.

## NEW QUESTION # 66

What is a fundamental structural feature of JSON? (Choose the single best answer.)

- A. It is a data structure stored in MySQL databases for configuration management
- **B. It is a plaintext data structure that consists of free-form Key:Value pairs**
- C. It is a compressed data structure optimized for low bandwidth applications
- D. It is an encrypted data structure optimized for secure applications

**Answer: B**

Explanation:

\* JSON Fundamentals: JSON (JavaScript Object Notation) is a text-based format for representing data in a structured, yet flexible way. Its key features are:

\* Key-Value Pairs: Information is organized as "key":"value" pairs, making it human-readable.

\* Plaintext: JSON is not encrypted, ensuring easy parsing across different systems.

\* JSON vs. Other Options

\* Not Encrypted: Security must be handled at a higher layer if needed.

\* Not Optimized for Databases: While JSON can be stored in databases, it's designed for data exchange, not database structure.

\* Not Inherently Compressed: Compression can be used with JSON, but it's not a core feature.
