Microsoft Power Platform Fundamentals 認定 PL-900 試験問題 (Q88-Q93):

質問 #88

A company plans to implement solutions that use Common Data Service as a data storage.

You need to recommend features to meet the company's needs.

Which features should you recommend? To answer, drag the appropriate features to the correct requirements.

Each feature may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

正解:

解説:

Explanation

Box 1: business rules

You can create business rules and recommendations to apply logic and validations without writing code or creating plug-ins.

Business rules provide a simple interface to implement and maintain fast-changing and commonly used rules.

Box 2: business process flows

Flows Power Automate includes several types of processes, each designed for a different purpose:

- * Automated flows. Create a flow that performs one or more tasks automatically after it's triggered by an event.

- * Button flows. Perform repetitive tasks simply by tapping a button on your mobile device.

- * Scheduled flows. Create a flow that performs one or more tasks on a schedule such as once a day, on a specific date, or after a certain time.

- * Business process flows. Ensure that people enter data consistently and follow the same steps every time they work in an app by creating a business process flow.

- * Workflows and actions. Dynamics 365 customizers may be familiar with the classic Common Data Service processes, which are workflows and actions.

Box 3: Common Data Model

Model-driven app design is a component-focused approach to app development. Model-driven app design doesn't require code and the apps you make can be simple or very complex. Unlike canvas app development where the designer has complete control over app layout, with model-driven apps much of the layout is determined for you and largely designated by the components you add to the app.
