Splunk Core Certified Power User Exam Sample Questions (Q186-Q191):

NEW QUESTION # 186
What does the following search do?

- A. Creates a table that groups the total number of users by vegetarian corndogs.
- B. Creates a table of the total count of users and split by corndogs.
- C. Creates a table of the total count of mysterymeat corndogs split by user.
- D. Creates a table with the count of all types of corndogs eaten split by user.

Answer: C

Explanation:
The search string below creates a table of the total count of mysterymeat corndogs split by user.
| stats count by user | where corndog=mysterymeat
The search string does the following:
It uses the stats command to calculate the count of events for each value of the user field. The stats command creates a table with two columns: user and count.
It uses the where command to filter the results by the value of the corndog field. The where command only keeps the rows where corndog equals mysterymeat.
Therefore, the search string creates a table of the total count of mysterymeat corndogs split by user.

NEW QUESTION # 187
Complete the search, ... | _____ failure>successes

- A. Search
- B. Any of the above
- C. If
- D. Where

Answer: D

Explanation:
The where command can be used to complete the search below.
... | where failure>successes
The where command is a search command that allows you to filter events based on complex or custom criteria.
The where command can use any boolean expression or function to evaluate each event and determine whether to keep it or discard it. The where command can also compare fields or perform calculations on fields using operators such as >, <, =, +, -, etc. The where command can be used after any transforming command that creates a table or a chart.
The search string below does the following:
* It uses ... to represent any search criteria or commands before the where command.
* It uses the where command to filter events based on a comparison between two fields: failure and successes.
* It uses the greater than operator (>) to compare the values of failure and successes fields for each event.
* It only keeps events where failure is greater than successes.

NEW QUESTION # 188
Which of the following is true about data sets used in the Pivot tool?

- A. They can only be created from saved reports.
- B. They can only be created from summary indexes.
- C. They can only be created from data models.
- D. They can only be created by users with the Admin role.

Answer: C

Explanation:
In Splunk, data sets used in the Pivot tool are derived from data models. The Pivot tool allows users to create reports and visualizations based on the structured information available in data models.

NEW QUESTION # 189
Which of the following statements about tags is true? (select all that apply.)

- A. Tags categorize events based on a search.
- B. Tags are based on field/vale pairs.
- C. Tags are case-insensitive.
- D. Tags are designed to make data more understandable.

Answer: B,D

Explanation:
Explanation
The following statements about tags are true: tags are based on field/value pairs and tags categorize events based on a search. Tags are custom labels that can be applied to fields or field values to provide additional context or meaning for your data. Tags can be used to filter or analyze your data based on common concepts or themes. Tags can be created by using various methods, such as search commands, configuration files, user interfaces, etc. Some of the characteristics of tags are:
Tags are based on field/value pairs: This means that tags are associated with a specific field name and a specific field value. For example, you can create a tag called "alert" for the field name "status" and the field value "critical". This means that only events that have status=critical will have the "alert" tag applied to them.
Tags categorize events based on a search: This means that tags are defined by a search string that matches the events that you want to tag. For example, you can create a tag called "web" for the search string sourcetype=access_combined. This means that only events that match the search string sourcetype=access_combined will have the "web" tag applied to them.
The following statements about tags are false: tags are case-insensitive and tags are designed to make data more understandable.
Tags are case-sensitive and tags are designed to make data more searchable. Tags are case-sensitive: This means that tags must match the exact case of the field name and field value that they are associated with. For example, if you create a tag called "alert" for the field name "status" and the field value
"critical", it will not apply to events that have status=CRITICAL or Status=critical. Tags are designed to make data more searchable: This means that tags can help you find relevant events or patterns in your data by using common concepts or themes. For example, if you create a tag called "web" for the search string sourcetype=access_combined, you can use tag=web to find all events related to web activity.

NEW QUESTION # 190
What do events in a transaction have In common?

- A. All events In a transaction must have the same timestamp.
- B. All events in a transaction must have the same sourcetype.
- C. All events in a transaction must have the exact same set of fields.
- D. All events in a transaction must be related by one or more fields.

Answer: D

Explanation:
Reference:https://docs.splunk.com/Documentation/Splunk/8.0.3/Knowledge/Abouttransactions
A transaction is a group of events that share some common characteristics, such as fields, time, or both. A transaction can be created by using the transaction command or by defining an event type withtransactiontype=true in props.conf. Events in a transaction have one or more fields in common that relate them to each other. For example, you can create a transaction based on JSESSIONID, which is a unique identifier for each user session in web logs. Events in a transaction do not have to have the same timestamp, sourcetype, or exact same set of fields. They only have to share one or more fields that define the transaction.

NEW QUESTION # 191

......

I think these smart tips will help you to study well for the exam and get a brilliant score without any confusion. To get the Splunk Core Certified Power User Exam SPLK-1002 practice test, find a reliable source that provides the SPLK-1002 Exam Dumps to their clients. Splunk Core Certified Power User Exam SPLK-1002 certification exams are not easy but quite tricky to know whether the applicant has complete knowledge regarding the subject or not.
