IBM Db2 12 for z/OS Administrator Sample Questions (Q36-Q41):

NEW QUESTION # 36

CPU utilization for a DB2 subsystem suddenly increased by approximately 20% and is still at this high level after 24 hours. No increase in workload was expected. What would be the most efficient analysis to perform?

- A. Execute a -DISPLAY STATS command to identify the workload which is causing the high CPU
- B. Execute a -DISPLAY TRACED command to check if there are additional traces running or if the global trace is on
- C. Check that the WLM settings are set correctly
- D. Start a system-wide performance trace to identify the workload which is causing the high CPU

Answer: D

NEW QUESTION # 37

Which of the following can be accomplished by altering a table to use column access control?

- A. Hide column definitions from the DB2 catalog table SYSIBM.SYSCOLUMNS
- B. Pre-materialize a view with the changed values provided by the column mask
- C. Modify the values returned for table columns based on column masking definitions
- D. Restrict the access to specific rows for all or some users

Answer: C

NEW QUESTION # 38

Which one of the following buffer pool thresholds determines the percentage of the buffer pool that might be occupied by sequentially accessed pages?

- A. DWQT
- B. VPPSEQT
- C. VPSEQT
- D. VDWQT

Answer: C

Explanation:

Sequential Steal Threshold (VPSEQT) ?The percentage of pages that can be used for prefetch.

Default is 70%. For pools with mostly sequential access, you can set this value as high as 100.

For pools with mostly random access, set this value very low. Review the prefetch failure statistics to determine if applications attempt to use sequential processing against the objects allocated in this pool.

NEW QUESTION # 39

Which of the following allows tracking of database administration tasks performed by system DBADMs?

- Answer: A**

Which of the following utilities would produce information needed to identify UNDO information for a transaction?

- Answer: C**

NEW QUESTION # 41
