In light of the truth that different people have various learning habits, we launch three Cybersecurity-Architecture-and-Engineering training questions versions for your guidance. In addition, you can freely download the demo of Cybersecurity-Architecture-and-Engineering learning materials for your consideration. We promise there will be no extra charges for such a try, on the contrary, we sincerely suggest you to try the demos of our Cybersecurity-Architecture-and-Engineering Exam Questions and make a well-content choice. You will find that our Cybersecurity-Architecture-and-Engineering training guide is worthy to buy for you time and money!

Just like the old saying goes, there is no royal road to success, and only those who do not dread the fatiguing climb of gaining its numinous summits. In a similar way, there is no smoothly paved road to the Cybersecurity-Architecture-and-Engineering certification. You have to work on it and get started from now. If you want to gain the related certification, it is very necessary that you are bound to spend some time on carefully preparing for the Cybersecurity-Architecture-and-Engineering Exam, including choosing the convenient and practical study materials, sticking to study and keep an optimistic attitude and so on.

Cybersecurity-Architecture-and-Engineering Exam Quick Prep - Cybersecurity-Architecture-and-Engineering Reliable Exam Sample

PDF4Test has a huge WGU industry elite team. They all have high authority in the Cybersecurity-Architecture-and-Engineering area. They use professional knowledge and experience to provide training materials for people ready to participate in different IT certification exams. The accuracy rate of exam practice questions and answers provided by PDF4Test is very high and they can 100% guarantee you pass the exam successfully for one time. Besides, we will provide you a free one-year update service.

WGU Cybersecurity Architecture and Engineering (KFO1/D488) Sample Questions (Q70-Q75):

NEW QUESTION # 70

After implementing a risk management plan for a new product launch, a project team conducted regular risk assessments to monitor the effectiveness of their control strategies.

Which step of the risk management life cycle was performed?

- A. Assess
- B. Control
- C. Identify
- D. Review

Answer: D

Explanation:

The correct answer is D - Review.

WGU Cybersecurity Architecture and Engineering (KFO1 / D488) describes that the review phase of the risk management cycle involves evaluating whether the implemented controls are effective over time. Conducting regular risk assessments after deployment falls under the review process.

Control (A) is about applying mitigations. Assess (B) happens earlier during initial evaluation. Identify (C) was done before applying the controls.

Reference Extract from Study Guide:

"Reviewing the effectiveness of risk control strategies through ongoing assessments ensures continuous improvement in risk management practices."

NEW QUESTION # 71

A company has discovered a vulnerability in its lightweight directory access protocol (LDAP) implementation, which could potentially allow unauthorized access to sensitive information. The company has decided to implement risk mitigation strategies to reduce the risk associated with this vulnerability.

Which risk mitigation strategy will meet the needs of the company?

- A. Implementing intrusion detection and prevention systems (IDPS) to monitor for suspicious activities and potential LDAP attacks
- **B. Implementing strong authentication mechanisms and encryption protocols to secure communication between the LDAP server and clients**
- C. Conducting regular security awareness training for employees to prevent social engineering attacks targeting LDAP credentials
- D. Regularly backing up data stored in the LDAP server to prevent data loss in the event of a breach

Answer: B

Explanation:

The correct answer is D - Implementing strong authentication mechanisms and encryption protocols to secure communication between the LDAP server and clients.

As outlined in WGU Cybersecurity Architecture and Engineering (KFO1 / D488) materials, securing LDAP communication and strengthening authentication directly addresses vulnerabilities related to unauthorized access. Using encryption protocols such as LDAP over SSL (LDAPS) ensures that credentials and sensitive data are transmitted securely.

Security awareness training (A) helps against social engineering but does not secure the LDAP system itself.

Backups (B) are a recovery measure, not a preventive one. IDPS (C) can detect attacks but does not directly secure the LDAP server against exploitation.

Reference Extract from Study Guide:

"Implementing strong authentication and encrypting communications for LDAP servers mitigates vulnerabilities by preventing unauthorized access and protecting sensitive information during transmission."

NEW QUESTION # 72

Which characteristic applies to machine-level languages?

- A. They use language translators known as compilers
- B. They use cables to connect circuits
- C. They use collection of short scripts
- **D. They use language translators known as assemblers**

Answer: D

Explanation:

Machine-level languages, also known as assembly languages, are low-level programming languages that are closely related to machine code.

* Definition: Machine-level languages consist of instructions that are directly executed by a computer's CPU.

* Assemblers: An assembler is a tool that translates assembly language code into machine code.

* Characteristics: Assembly languages are specific to a computer architecture and provide a way to write programs that can be executed by the hardware directly.

NEW QUESTION # 73

An IT organization is deploying a new secure Simple Mail Transfer Protocol (SMTP) server to handle email communications for the company. The company must ensure that the servers are secure and protected from external threats. The SMTP servers should be able to communicate with the internal network and the internet, but all incoming and outgoing traffic should be inspected and filtered to prevent cyberattacks.

- A. Deploy the SMTP servers in a demilitarized zone (DMZ) between two firewalls
- B. Open Transmission Control Protocol (TCP) port 25 on the firewall
- C. Deploy a firewall in front of the SMTP servers
- D. Block Transmission Control Protocol (TCP) port 25 on the firewall

Answer: A

Explanation:

Deploying the SMTP server in a DMZ between two firewalls allows email traffic to be filtered before it ever touches the internal network. The DMZ serves as a security buffer zone where public-facing services are isolated but still accessible from both internal and external networks, thus reducing the attack surface.

NIST SP 800-41 Rev. 1 (Guidelines on Firewalls and Firewall Policy):

"Organizations often place publicly accessible resources (e.g., SMTP servers) in a demilitarized zone (DMZ) between two firewalls to provide layered protection and isolate internal systems from external threats."

#WGU Course Alignment:

Domain: Network Architecture and Design

Topic: Implement secure DMZ design and segmentation

NEW QUESTION # 74

A company has recently completed its disaster recovery plan and is preparing to test it. The company's IT team has identified the need to simulate a disaster scenario to evaluate the effectiveness of the plan. The team has considered options including full interruption tests, walkthroughs, tabletop exercises, and checklists. They want to choose a testing method that will allow them to evaluate the plan in a controlled environment while minimizing the impact on the company's operations.

Which testing method will meet the needs of the company?

- A. Walk-through
- B. Full interruption test
- C. Tabletop exercises
- D. Checklists

Answer: C

Explanation:

Tabletop exercises simulate emergency scenarios in a low-risk, discussion-based format, allowing teams to walk through recovery procedures and decision-making without disrupting actual business operations.

NIST SP 800-84 (Guide to Test, Training, and Exercise Programs):

"Tabletop exercises are effective tools for validating plans and procedures in a discussion format without impacting normal operations." Full interruption tests are disruptive; checklists and walkthroughs offer lower fidelity evaluations.

#WGU Course Alignment:

Domain: Business Continuity and Disaster Recovery

Topic: Test disaster plans using low-impact simulation techniques
