Up-to-Date Online Salesforce Slack-Dev-201 Practice Test Engine

Purchasing our Slack-Dev-201 training test is not complicated, there are mainly four steps: first, you can choose corresponding version according to the needs you like. Next, you need to fill in the correct email address. And if the user changes the email during the subsequent release, you need to update the email. Then, the user needs to enter the payment page of the Slack-Dev-201 Learning Materials to buy it. Finally, within ten minutes of payment, the system automatically sends the Slack-Dev-201 study materials to the user's email address. And then you can quickly study and pass the Slack-Dev-201 exam.

Salesforce Certified Slack Developer Sample Questions (Q60-Q65):

NEW QUESTION # 60

What is a crucial best practice to follow when submitting an app to the Slack Directory?

- A. Making the app compatible with external non-Slack applications to increase its functionality
- B. Creating a detailed and comprehensive documentation that includes instructions, use cases, and support information

- C. Including extensive promotional content within the app to encourage user engagement
- D. Ensuring that the app is able to access and store all user messages for data analysis purposes

Answer: B

Explanation:

Creating a detailed and comprehensive documentation that includes instructions, use cases, and support information A crucial best practice when submitting an app to the Slack Directory is to provide detailed and comprehensive documentation. This documentation should include clear instructions, potential use cases, and support contact information. It is essential for guiding users on how to effectively use the app and for ensuring a good user experience.

Why not the other options:

- *Storing all user messages for data analysis may violate privacy policies and is not a requirement for Slack Directory submission.
- *Compatibility with external non-Slack applications, while beneficial, is not a core requirement for Slack Directory submission.
- *Including excessive promotional content within the app is not a recommended practice for Slack Directory submission.

NEW QUESTION # 61

Your company is developing a Slack app to streamline the employee feedback process. The app should allow for easy submission and review of feedback.

Which feature aligns best with Slack's architecture for this purpose?

- **A. Create a private feedback submission form using a modal, with results sent to a designated HR channel**
- B. Implement a slash command that allows employees to post feedback directly in any channel
- C. Use an external survey tool and post the link in Slack for feedback submission
- D. Configure the app to send feedback submissions to a company-wide channel for transparency

Answer: A

Explanation:

Create a private feedback submission form using a modal, with results sent to a designated HR channel Using a modal for private feedback submission ensures confidentiality and user-friendliness. Sending the results to a designated HR channel allows for organized review and handling of feedback while respecting privacy.

Why not the other options:

- *Posting feedback in a company-wide channel can lead to privacy issues and may discourage honest feedback.
- *It involves using an external tool, which reduces the seamless integration and interaction within Slack.
- *Posting feedback in any channel could compromise confidentiality and result in disorganized feedback collection.

NEW QUESTION # 62

Your Slack app is designed to create and manage private channels.

Which OAuth scope should you request to ensure security and appropriate functionality?

- **A. groups:write**
- B. users:read
- C. im:write
- D. channels:read

Answer: A

Explanation:

groups:write The groups:write scope is necessary for an app that needs to create and manage private channels (known as groups in Slack API terminology). This scope allows the app to perform the required actions within private channels while ensuring it has only the permissions it needs.

Why not the other options:

- *Channels:read allows reading public channel data, not managing private channels.
- *Im:write is meant for managing direct message conversations, not private channels.
- *Users:read is for accessing user information and is unrelated to channel management.

NEW QUESTION # 63

Your Slack app includes a feature to export user-generated reports.

What security measure should be prioritized to protect the confidentiality of these reports?

- A. Use a standard HTTP connection for report transmission to optimize speed
- **B. Encrypt the reports during transmission and storage, providing access only to authorized users**
- C. Regularly email reports to all workspace members for transparency
- D. Implement an open-access policy to allow easy sharing of reports within the Slack workspace

Answer: B

Explanation:

Encrypt the reports during transmission and storage, providing access only to authorized users Encrypting reports during transmission and storage, and ensuring that they are accessible only to authorized users, is a key security measure. This approach protects sensitive data and maintains confidentiality by limiting access.

Why not the other options:

*An open-access policy can compromise the confidentiality of the reports.

*Using a standard HTTP connection does not provide the necessary security for sensitive data, as it is not encrypted.

*Emailing reports to all workspace members can lead to unauthorized access and breaches in data privacy.

NEW QUESTION # 64

When designing a Slack app to assist with task management, what approach should you take to ensure the app aligns with Slack's user experience principles?

- A. The app should constantly update users with all tasks in the workspace, regardless of relevance
- B. The app should require users to navigate to an external website to manage tasks
- **C. The app should provide concise, actionable notifications only when necessary**
- D. The app should post frequent reminders in the channel to keep users engaged

Answer: C

Explanation:

The app should provide concise, actionable notifications only when necessary Providing concise, actionable notifications only when necessary aligns with Slack's user experience principles of keeping work life simpler and more productive. It ensures users receive relevant information without unnecessary distraction.

Why not the other options:

*Frequent reminders can be disruptive and counterproductive, leading to notification fatigue..

*Requiring navigation to an external website for task management disrupts the workflow and is not conducive to a streamlined user experience within Slack.

*Constantly updating users with all tasks, regardless of their relevance, can overwhelm users and detract from their productivity.

NEW QUESTION # 65

.....

Actual4Exams Slack-Dev-201 practice test simulates the real Salesforce Slack-Dev-201 exam environment. This situation boosts the candidate's performance and enhances their confidence. After attempting the Slack-Dev-201 practice exams, candidates become more familiar with a real Salesforce Certified Slack Developer Slack-Dev-201 Exam environment and develop the stamina to sit for several hours consecutively to complete the Slack-Dev-201 exam. This way, the actual Salesforce Certified Slack Developer Slack-Dev-201 exam becomes much easier for them to handle.
