Salesforce Certified Slack Administrator Sample Questions (Q90-Q95):

NEW QUESTION # 90
What are two reasons why a company would be interested in using SAML single sign-on (SSO) to authenticate its users on Slack? (Select the TWO best answers.)

- A. It allows employees to use the same login credentials they already use for other applications.
- B. It allows your organization to control the encryption keys to your users' data within Slack.
- C. It is a standard security feature that is available on all of Slack's paid plans.
- D. It replaces the need for your admins to have to set up an identity provider (IdP) for Slack.
- E. It gives organizations more control over their security policies, including password format requirements.

Answer: A,E

Explanation:
SAML SSO provides:
"Organizations with more control over their authentication policies, including password requirements, session durations, and login behaviors."
"Employees can use their existing login credentials for all applications, including Slack, through SSO integration with the identity provider." Option B is wrong because SSO depends on having an IdP in the first place. Option C is incorrect because SSO is

available only on certain Slack paid plans (not all). Option E refers to Enterprise Key Management (EKM), not SSO.

NEW QUESTION # 91

Takeshi is an Org Admin on Enterprise Grid. A business leader asks him to create an org-wide channel for a cross-functional company project, but he replies that he needs to create a cross-workspace channel instead.
Which of the following best describes why a multi-workspace channel is more appropriate than an org-wide channel in this scenario?

- A. Org-wide channels are discoverable by all workspaces in the same Grid org and should only be used for information that applies to all employees.
- B. Org-wide channels are created by default when Slack is first implemented and cannot be reconfigured afterwards.
- C. There is a limit of ten org-wide channels, and this project would not necessitate creating one.
- D. Multi-workspace channels can be archived at the end of the project, but org-wide channels cannot.

Answer: A

Explanation:
In Enterprise Grid, an org-wide channel is intended for communications relevant to all members across all workspaces. Slack documentation states:
"Org-wide channels are automatically shared with every workspace in your organization and should be used for information that applies to everyone, such as company-wide announcements." Since a cross-functional project would involve specific participants and not the entire organization, a multi- workspace channel is a more appropriate and flexible solution.

NEW QUESTION # 92

Your organization enabled data residency and chose to host your organization's data in the Montreal, Canada region.
Which specific data types will be uniquely stored in this geographic region? (Select the best answer.)

- A. Messages, files, snippets, workspaces and channel membership information
- B. Messages, files, snippets, posts and member profiles
- C. Messages, files, data used for analytics, snippets and posts
- D. Messages, files, snippets, posts and files

Answer: B

Explanation:
With Slack's data residency, the following data types are stored in the selected region:
"Messages, files, snippets, posts, and member profiles."
Data used for analytics and some metadata may still be processed globally, but the primary user-generated content is kept within the specified region.

NEW QUESTION # 93

You're a Workplace Admin for a major retail chain in Europe on the Slack Pro plan. An executive user asks to access channel history from more than 18 months ago, but the retention policy was set at one year.
Will it be possible for you to recover the data?
(Select the best answer.)

- A. Yes, because Slack employs multi-factor authentication for all administrative access to systems. Slack can access channel history upon request from Org Admins.
- B. No, because this company is in a territory affected by GDPR. Slack is legally not allowed to provide this data after the retention date has passed.
- C. No, because customer data is removed immediately upon expiration of message retention. Slack deletes all information from production systems at that time.

- D. Yes, because Slack's disaster recovery policy and business continuity plan provide backups that organizations on the Slack Pro plan can access upon request from Org Admins.

Answer: C

Explanation:
According to Slack's data retention policies:
"When a message retention policy is applied and messages reach their expiration, Slack permanently deletes the messages from production systems, and recovery is not possible." Slack's business continuity plans and MFA security are unrelated to data retrieval for expired content. GDPR (C) impacts retention requirements but the critical reason for non-recovery is Slack's deletion behavior (D).

NEW QUESTION # 94
You're an IT Manager and Slack Workspace Owner leading a team on the Business+ plan.
Your security team requests a governance process for app installations and approvals, including audit tracking and rationale collection.
What is the best approach that uses native functionality to address the security team's request?

- A. Create a public channel called #triage-apps. Implement a Workflow Builder workflow with a form that asks end users to submit their app request name and a rationale. App Managers can then review and approve or deny the app from the App Directory.
- B. Turn on app approval within the Manage Apps dashboard, and require end users to provide a comment for each installation request in the App Directory. Add the members of your team to the list of App Managers, and send all approval requests to a public #plz-apps channel.
- C. Turn on app approval within the Manage Apps dashboard. Limit app approval to Workspace Owners only using Slackbot, and let the security team know when new apps are approved in the #team-security channel.
- D. Preapprove the most common tools that workspace members would need, and provide the security team with this list. Restrict apps that are not currently approved for use.

Answer: B

Explanation:
Slack advises:
"Using native app approval workflows within the Manage Apps dashboard ensures that app installation requests are logged, require a rationale, and can be tracked by App Managers in a centralized approval workflow." Workflow Builder (D) is useful but unnecessary when Slack's built-in app approval is available. Options A and C are partial solutions but miss the audit trail and rationale requirement.
