Fortinet FCSS - SD-WAN 7.6 Architect Sample Questions (Q72-Q77):

NEW QUESTION # 72

You are planning a large SD-WAN deployment with approximately 1000 spokes and want to allow ADVPN between the spokes. Some remote sites use FortiSASE to connect to the company's SD-WAN hub. Which overlay routing configuration should you use?

- A. BGP per overlay with dynamic BGP for ADVPN shortcut routing.
- B. BGP per overlay with BGP next-hop convergence for ADVPN shortcut routing.
- C. BGP on loopback with dynamic BGP for ADVPN shortcut routing.

- D. BGP on loopback with IPsec phase2 selectors for ADVPN shortcut routing.

Answer: C

Explanation:

Using BGP on loopback with dynamic BGP enables scalable routing for large deployments and supports ADVPN shortcut routing with resilient, stable next-hop reachability across dynamic tunnels.

NEW QUESTION # 73

Which two statements are correct when traffic matches the implicit SD-WAN rule? (Choose two.)

- A. All SD-WAN rules have the default and gateway setting enabled.
- B. Traffic is load balanced using the algorithm set for the v4-ecmp-mode setting.
- C. Traffic does not match any of the entries in the policy route table.
- D. The session information output displays no SD-WAN-specific details.

Answer: C,D

Explanation:

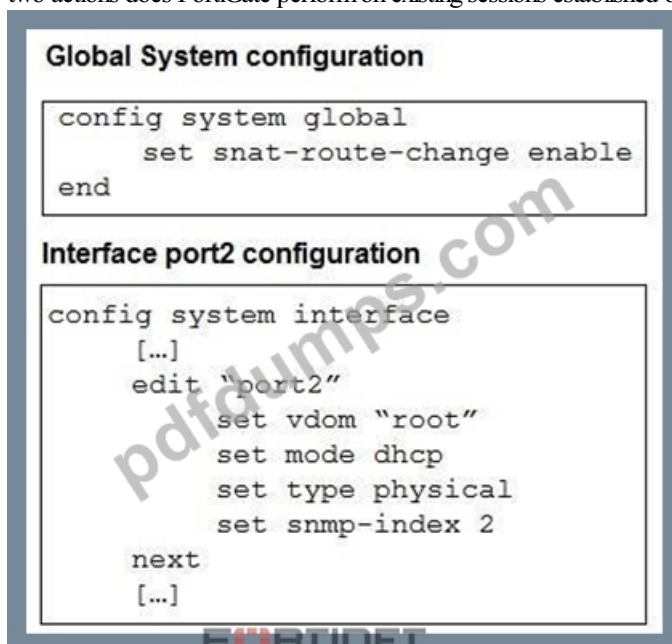

If the session matched the SD-WAN implicit rule, and therefore was handled using standard FIB routing, these SD-WAN fields do not appear.

If traffic doesn't match any entry in the proute table then it will use the implicit deny SD-WAN rule.

NEW QUESTION # 74

Refer to the exhibits. The exhibits show the source NAT (SNAT) global setting, port2 interface settings, and the routing table on FortiGate.

The administrator increases the member priority on port2 to 20. Upon configuration changes and the receipt of new packets, which two actions does FortiGate perform on existing sessions established over port2? (Choose two.)

Routing Table on FortiGate

```
branch1_fgt # get router info routing-table all
Codes: K – kernel, C – connected, S – static, R – RIP, B – BGP
       O – OSPF, IA – OSPF inter area
       N1 – OSPF NSSA external type 1, N2 – OSPF NSSA external type 2
       E1 – OSPF external type 1, E2 – OSPF external type 2
       i – IS-IS, L1 – IS-IS level-1, L2 – IS-IS level-2, ia – IS-IS inter area
       * – candidate default
```

Routing table for VRF=0

```
S* 0.0.0.0/0 [1/0] via 192.2.0.2, port2, [1/0]
    [1/0] via 192.2.0.10, port1, [10/0]
```

FORTINET

- A. FortiGate flags the SNAT session as dirty only if the administrator has assigned an IP pool to the firewall policies with NAT.
- **B. FortiGate flags the sessions as dirty.**
- **C. FortiGate updates the gateway information of the sessions with SNAT so that they use port1 instead of port2.**
- D. FortiGate routes only new sessions over port2.
- E. FortiGate continues routing all existing sessions over port2.

Answer: B,C

Explanation:

With set snat-route-change enable, FortiGate updates SNAT sessions' egress interface and gateway if a better route becomes available (e.g., port1 after priority change).

The sessions are flagged as dirty, meaning their routing and SNAT details are refreshed upon new traffic matching the session.

NEW QUESTION # 75

Refer to the exhibits. The interface details, static route configuration, and firewall policies on the managed FortiGate device are shown.

You want to configure a new SD-WAN zone, named Underlay, that contains the interfaces port1 and port2.

What must be your first action?

Interface details

Name	Type	Members	IP/Netmask
Physical Interface 13			
port1	Physical Interface		192.2.0.1/255.255.255.248
port2	Physical Interface		192.2.0.9/255.255.255.248

Test	SD-WAN Zone	port2	0.0.0.0/0.0.0.0
virtual-wan-link	SD-WAN Zone		0.0.0.0/0.0.0.0

Static route details

Destination	Gateway IP	Interface	Status
192.168.1.0/24	192.2.0.254	port1	Enabled
168.1.1.0/24	192.2.0.4	port1	Enabled

Firewall policies on managed FortiGate

	Policy	From	To	Source	Destination	Service
<input type="checkbox"/>	Corp(5)	port1	port5	4 Corp-net	4 LAN-net	HTTP HTTPS
<input type="checkbox"/>	DIA(1)	port5	port1	4 LAN-net	4 all	ALL

- A. Delete the SD-WAN Zone Test.
- B. Delete the static routes.
- C. Define port1 as an SD-WAN member.
- **D. Delete the firewall policies.**

Answer: D

Explanation:

You cannot add port1 as an SD-WAN member if it's already in use by an active firewall policy.

NEW QUESTION # 76

Refer to the exhibits. The exhibits show the SD-WAN zone configuration of an SD-WAN template prepared on FortiManager and the policy package configuration.

When the administrator tries to install the configuration changes, FortiManager fails to commit.

What should the administrator do to fix the issue?

SD-WAN zone configuration on FortiManager

SD-WAN Zones							
<div><div>+ Create New</div><div>Edit</div><div>Delete</div><div>Q Where Used</div><div>Search...</div></div>

<input type="checkbox"/>	4	HUB1-VPN1	0.0.0.0	0	1	Enable	1 Device in Total branch1_fgt[root]
<input type="checkbox"/>	5	HUB1-VPN2	0.0.0.0	0	1	Enable	

Policy package configuration

#	Name	From	To	Source	Destination	Install On
Corp-SOT_BBLK(1/1 Total:1)						
2	DIA	LAN	underlay	LAN-net	all	Installation Targets
3	To Hub-Overlay	LAN	HUB1-VPN1	all	all	Installation Targets
Implicit(4/4 Total:1)						
4	Implicit Deny	any	any	all	all	

- A. Configure HUB1 as the destination of policy 3.
- B. Configure a normalized interface for the IPsec tunnel HUB1-VPN1.
- C. Configure both HUB1-VPN1 and HUB1-VPN2 as the destination of policy 3.
- D. Configure branch1_fgt as the installation target for policy 3.

Answer: A

Explanation:

Policy 3 points traffic To = HUB1-VPN1, which is an SD-WAN member interface. In SD-WAN you must reference the SD-WAN zone (the logical interface) in policies, not its member tunnels.

Change the policy's To interface to the zone HUB1, and the install will succeed.
