

Free PDF Quiz Databricks - Perfect Valid Databricks-Certified-Data-Engineer-Associate Exam Tips

Databricks Databricks-Certified-Data-Engineer-Associate (Databricks-Certified-Data-Engineer-Associate Exam)

Mark Question Question 3 of 10

A data engineer wants to create a new table containing the names of customers that live in France. They have written the following command:

```
CREATE TABLE customersInFrance
AS
SELECT id,
       firstName,
       lastName
FROM customersLocations
WHERE country = 'FRANCE';
```

A senior data engineer mentions that it is organization policy to include a table property indicating that the new table includes personally identifiable information (PII).

Which of the following lines of code fills in the above blank to successfully complete the task?

- ☐ A. There is no way to indicate whether a table contains PII.
- ☐ B. "COMMENT PII"
- ☒ C. TBLPARTIAL PII
- ☐ D. COMMENT "Contains PII"
- ☐ E. PII

2026 Latest Lead1Pass Databricks-Certified-Data-Engineer-Associate PDF Dumps and Databricks-Certified-Data-Engineer-Associate Exam Engine Free Share: <https://drive.google.com/open?id=1jXnhfEtPGpBJoI4bQ8XUV56YyaZqNxwu>

You may urgently need to attend Databricks-Certified-Data-Engineer-Associate certificate exam and get the certificate to prove you are qualified for the job in some area. If you buy our Databricks-Certified-Data-Engineer-Associate study materials you will pass the test almost without any problems. Our Databricks-Certified-Data-Engineer-Associate study materials boost high passing rate and hit rate so that you needn't worry that you can't pass the test too much. To further understand the merits and features of our Databricks-Certified-Data-Engineer-Associate Practice Engine you could look at the introduction of our product in detail.

Your selection on the right tool to help you pass the Databricks-Certified-Data-Engineer-Associate exam and get the according certification matters a lot for the right Databricks-Certified-Data-Engineer-Associate exam braindumps will spread you a lot of time and efforts. Our Databricks-Certified-Data-Engineer-Associate Study Guide is the most reliable and popular exam product in the market for we only sell the latest Databricks-Certified-Data-Engineer-Associate practice engine to our clients and you can have a free trial before your purchase.

Databricks-Certified-Data-Engineer-Associate Exam Experience | Exam Dumps Databricks-Certified-Data-Engineer-Associate Zip

If you like to practice Databricks-Certified-Data-Engineer-Associate exam dumps on paper, you should choose us. Our Databricks-Certified-Data-Engineer-Associate PDF version is printable, and you can print them into hard one and take some notes on them. Therefore you can study in anytime and at anyplace. Besides, free demo is available for Databricks-Certified-Data-Engineer-Associate PDF version, and you can have a try before buying. After your payment, you can receive the downloading link and password for Databricks-Certified-Data-Engineer-Associate Exam Dumps within ten minutes, and if you don't receive, you can contact us, we will solve the problem for you as quickly as possible.

Databricks Certified Data Engineer Associate Exam Sample Questions (Q97-Q102):

NEW QUESTION # 97

A data engineering team has two tables. The first table `march_transactions` is a collection of all retail transactions in the month of March. The second table `april_transactions` is a collection of all retail transactions in the month of April. There are no duplicate records between the tables.

Which of the following commands should be run to create a new table `all_transactions` that contains all records from `march_transactions` and `april_transactions` without duplicate records?

- A. CREATE TABLE all_transactions AS
SELECT * FROM march_transactions
UNION SELECT * FROM april_transactions;
- B. CREATE TABLE all_transactions AS
SELECT * FROM march_transactions
MERGE SELECT * FROM april_transactions;
- C. CREATE TABLE all_transactions AS
SELECT * FROM march_transactions
OUTER JOIN SELECT * FROM april_transactions;
- D. CREATE TABLE all_transactions AS
SELECT * FROM march_transactions
INTERSECT SELECT * FROM april_transactions;
- E. CREATE TABLE all_transactions AS
SELECT * FROM march_transactions
INNER JOIN SELECT * FROM april_transactions;

Answer: A

Explanation:

Explanation

To create a new table all_transactions that contains all records from march_transactions and april_transactions without duplicate records, you should use the UNION operator, as shown in option A. This operator combines the result sets of the two tables while automatically removing duplicate records.

NEW QUESTION # 98

A data engineer is attempting to drop a Spark SQL table my_table and runs the following command:

```
DROP TABLE IF EXISTS my_table;
```

After running this command, the engineer notices that the data files and metadata files have been deleted from the file system.

Which of the following describes why all of these files were deleted?

- A. The table was managed
- B. The table was external
- C. The table's data was larger than 10 GB
- D. The table's data was smaller than 10 GB
- E. The table did not have a location

Answer: A

Explanation:

The reason why all of the data files and metadata files were deleted from the file system after dropping the table is that the table was managed. A managed table is a table that is created and managed by Spark SQL. It stores both the data and the metadata in the default location specified by the spark.sql.warehouse.dir configuration property. When a managed table is dropped, both the data and the metadata are deleted from the file system.

Option B is not correct, as the size of the table's data does not affect the behavior of dropping the table. Whether the table's data is smaller or larger than 10 GB, the data files and metadata files will be deleted if the table is managed, and will be preserved if the table is external.

Option C is not correct, for the same reason as option B.

Option D is not correct, as an external table is a table that is created and managed by the user. It stores the data in a user-specified location, and only stores the metadata in the Spark SQL catalog. When an external table is dropped, only the metadata is deleted from the catalog, but the data files are preserved in the file system.

Option E is not correct, as a table must have a location to store the data. If the location is not specified by the user, it will use the default location for managed tables. Therefore, a table without a location is a managed table, and dropping it will delete both the data and the metadata.

NEW QUESTION # 99

A data engineer needs to create a table in Databricks using data from a CSV file at location /path/to/csv.

They run the following command:

```
CREATE TABLE new_table
_____ databricks
OPTIONS (
  header = "true",
  delimiter = "|"
)
LOCATION "path/to/csv"
```

Which of the following lines of code fills in the above blank to successfully complete the task?

- A. USING CSV
- B. FROM "path/to/csv"
- C. None of these lines of code are needed to successfully complete the task
- D. FROM CSV
- E. USING DELTA

Answer: A

NEW QUESTION # 100

A data engineer inherits a Delta table with historical partitions by country that are badly skewed. Queries often filter by high-cardinality customer_id and vary across dimensions over time. The engineer wants a strategy that avoids a disruptive full rewrite, reduces sensitivity to skewed partitions, and sustains strong query performance as access patterns evolve.

Which two actions should the data engineer take? (Choose 2)

- A. Keep existing partitions and rely on bin-packing OPTIMIZE only; ZORDER and clustering are unnecessary for multi-dimensional filters.
- B. Disable data skipping statistics to avoid maintenance overhead; rely on adaptive query execution instead.
- C. Switch from static partitioning to liquid clustering and select initial clustering keys that reflect common filters such as customer_id.
- D. Depend solely on optimized writes; Databricks will automatically replace partitioning with clustering over time.
- E. Periodically run OPTIMIZE table_name.

Answer: C,E

Explanation:

Liquid Clustering replaces traditional partitioning and ZORDER optimization by automatically organizing data according to clustering keys. It supports evolving clustering strategies without requiring a full table rewrite. To maintain cluster balance and improve performance, the OPTIMIZE command should be run periodically. OPTIMIZE groups data files by clustering keys and helps reduce small file overhead.

NEW QUESTION # 101

Which of the following is stored in the Databricks customer's cloud account?

- A. Repos
- B. Data
- C. Databricks web application
- D. Notebooks
- E. Cluster management metadata

Answer: B

Explanation:

The only option that is stored in the Databricks customer's cloud account is data. Data is stored in the customer's cloud storage service, such as AWS S3 or Azure Data Lake Storage. The customer has full control and ownership of their data and can access it directly from their cloud account.

Option A is not correct, as the Databricks web application is hosted and managed by Databricks on their own cloud infrastructure. The customer does not need to install or maintain the web application, but only needs to access it through a web browser.

Option B is not correct, as the cluster management metadata is stored and managed by Databricks on their own cloud infrastructure. The cluster management metadata includes information such as cluster configuration, status, logs, and metrics. The customer can view and manage their clusters through the Databricks web application, but does not have direct access to the cluster management metadata.

Option C is not correct, as the repos are stored and managed by Databricks on their own cloud infrastructure.

Repos are version-controlled repositories that store code and data files for Databricks projects. The customer can create and manage their repos through the Databricks web application, but does not have direct access to the repos.

Option E is not correct, as the notebooks are stored and managed by Databricks on their own cloud infrastructure. Notebooks are interactive documents that contain code, text, and visualizations for Databricks workflows. The customer can create and manage their notebooks through the Databricks web application, but does not have direct access to the notebooks.
