Because our materials not only has better quality than any other same learn products, but also can guarantee that you can pass the Professional-Cloud-Architect exam with ease.

## Google Certified Professional - Cloud Architect (GCP) Sample Questions

## (Q226-Q231):

### NEW QUESTION # 226

Your organization has a 3-tier web application deployed in the same network on Google Cloud Platform. Each tier (web, API, and database) scales independently of the others. Network traffic should flow through the web to the API tier and then on to the database tier. Traffic should not flow between the web and the database tier. How should you configure the network?

- A. Set up software based firewalls on individual VMs.
- B. Add each tier to a different subnetwork.
- C. Add tags to each tier and set up firewall rules to allow the desired traffic flow.
- D. Add tags to each tier and set up routes to allow the desired traffic flow.

**Answer: C**

Explanation:

Google Cloud Platform(GCP) enforces firewall rules through rules and tags. GCP rules and tags can be defined once and used across all regions.

### NEW QUESTION # 227

Your development team has created a structured API to retrieve vehicle data. They want to allow third parties to develop tools for dealerships that use this vehicle event data. You want to support delegated authorization against this data.

What should you do?

- A. Restrict data access based on the source IP address of the partner systems
- B. Create secondary credentials for each dealer that can be given to the trusted third party
- C. Build SAML 2.0 SSO compatibility into your authentication system
- D. Build or leverage an OAuth-compatible access control system

**Answer: D**

Explanation:

Delegate application authorization with OAuth2

Cloud Platform APIs support OAuth 2.0, and scopes provide granular authorization over the methods that are supported. Cloud Platform supports both service-account and user-account OAuth, also called three-legged OAuth.

### NEW QUESTION # 228

Your organization wants to control IAM policies for different departments independently, but centrally.

Which approach should you take?

- A. A single Organization with multiple projects, each with a central owner
- B. Multiple Organizations, one for each department
- C. Multiple Organizations with multiple Folders
- D. A single Organization with Folder for each department

**Answer: D**

Explanation:

Folders are nodes in the Cloud Platform Resource Hierarchy. A folder can contain projects, other folders, or a combination of both.

You can use folders to group projects under an organization in a hierarchy. For example, your organization might contain multiple departments, each with its own set of GCP resources. Folders allow you to group these resources on a per-department basis.

Folders are used to group resources that share common IAM policies. While a folder can contain multiple folders or resources, a given folder or resource can have exactly one parent.

### NEW QUESTION # 229

You have deployed an application on Anthos clusters (formerly Anthos GKE). According to the SRE practices at your company you need to be alerted if the request latency is above a certain threshold for a specified amount of time. What should you do?

- A. Install Anthos Service Mesh on your cluster. Use the Google Cloud Console to define a Service Level Objective (SLO)
- B. Enable the Cloud Trace API on your project and use Cloud Monitoring Alerts to send an alert based on the Cloud Trace metrics
- C. Use Cloud Profiler to follow up the request latency. Create a custom metric in Cloud Monitoring based on the results of Cloud Profiler, and create an Alerting Policy in case this metric exceeds the threshold
- D. Configure Anthos Config Management on your cluster and create a yml file that defines the SLO and alerting policy you want to deploy in your cluster

**Answer: A**

Explanation:

<https://cloud.google.com/service-mesh/docs/observability/slo-overview>

### NEW QUESTION # 230

Google Cloud Platform resources are managed hierarchically using organization, folders, and projects. When Cloud Identity and Access Management (IAM) policies exist at these different levels, what is the effective policy at a particular node of the hierarchy?

- A. The effective policy is determined only by the policy set at the node
- B. The effective policy is the policy set at the node and restricted by the policies of its ancestors
- C. The effective policy is the intersection of the policy set at the node and policies inherited from its ancestors
- D. The effective policy is the union of the policy set at the node and policies inherited from its ancestors

**Answer: B**

Explanation:

Reference: <https://cloud.google.com/resource-manager/docs/cloud-platform-resource-hierarchy>

### NEW QUESTION # 231

.....

When you know you will enjoy one year free update after purchase, you may consider how to get the latest Google Professional-Cloud-Architect exam torrent. Here, we will tell you, the TorrentExam system will send the update Professional-Cloud-Architect exam dumps to you automatically. You can pay attention to your payment email. If you find there is update and do not find any update email, do not worry, you can check your spam. If there is still not, please contact us by email or online chat.
