

EMT Pass-For-Sure Braindumps: Emergency Medical Technicians Exam & EMT Quiz Guide

EMT Exam Questions & Answers

What is the rate of CPR in breaths and compressions:

- 6 breaths and 110 compressions in a minute

What is considered tachycardic for an adult?

- heart rate more than 100

What is considered bradycardic for an adult?

- Heart rate less than 60

When is nitroglycerin not advised to be administered?

- if the systolic blood pressure is less than 100

Where does blood flow after it leaves the left ventricle?

- it flows to the aortic arch

What medication is Erectile Dysfunction medications a contraindication?

- nitroglycerin

What is the parasympathetic system responsible for?

- slowing the heart rate and intestinal activity

What is the function of the carotid artery?

- it carries blood from the heart to the head

Are open ended or close ended questions better to ask?

- open ended questions; it avoids the yes/no answer

what delivers blood to the right atrium?

- the superior and inferior vena cava

What does diastolic blood pressure refer to?

- it refers to the pressure of the vessels during the relaxation phase; bottom of the blood pressure

What is TIA

- transient ischemic attack; this is where vessels in the brain are blocked for a few minutes

When do you change roles during CPR?

P.S. Free & New EMT dumps are available on Google Drive shared by Prep4pass: <https://drive.google.com/open?id=1jNDMw1kkpLrESJaCnunbrillxlgXWCVd>

If you have limited budget, and also need complete value package, why not try our Prep4pass's EMT exam training materials. It is easy to understand with reasonable price and high accuracy. It's suitable for all kinds of learners. If you choose Prep4pass' EMT Exam Training materials, you will get one year free renewable service.

Please select our Prep4pass to achieve good results in order to pass NREMT certification EMT exam, and you will not regret doing so. It is worth spending a little money to get so much results. Our Prep4pass can not only give you a good exam preparation, allowing you to pass NREMT Certification EMT Exam, but also provide you with one-year free update service.

Test EMT Dumps.zip & EMT Valid Test Online

Many people want to find the fast way to get the EMT test pdf for immediately study. Here, EMT technical training can satisfy your needs. You will receive your EMT exam dumps in about 5-10 minutes after purchase. Then you can download the EMT prep material instantly for study. Furthermore, we offer one year free update after your purchase. Please pay attention to your payment email, if there is any update, our system will send email attached with the NREMT EMT Updated Dumps to your email.

NREMT Emergency Medical Technicians Exam Sample Questions (Q36-

Q41):

NEW QUESTION # 36

An 84-year-old patient has a sudden onset of weakness to one side of the body. The patient has a history of hypertension and high cholesterol. The vital signs are BP 176/94 mmHg, P 108/min, R 18/min, and SpO₂ 97% on room air. For which of the following additional symptoms should the EMT assess? Select the three correct options.

- A. Facial droop
- B. Miosis
- C. Tremors
- D. Syncopal episodes
- E. Arm drift
- F. Slurred speech

Answer: A,E,F

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The symptoms described are classic for a stroke (CVA). Additional hallmark findings include:

- * Arm drift (motor weakness or hemiparesis)
- * Facial droop (Cranial nerve VII involvement)
- * Slurred speech (dysarthria or aphasia)

These form the basis of prehospital stroke assessment tools like FAST:

- * Face drooping
- * Arm weakness
- * Speech difficulty
- * Time to call 911

Miosis (pupil constriction) and tremors are not associated with stroke in EMS context. Syncope is an isolated event and not a reliable CVA symptom.

NEW QUESTION # 37

Which of the following is the most reliable indicator of effective respiration in a patient?

- A. Pulse oximetry reading
- B. Respiratory rate
- C. Skin color
- D. Mental status

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Mental status reflects perfusion and oxygen delivery to the brain, which is highly sensitive to hypoxia and hypercapnia. Even if respiratory rate and SpO₂ are normal, altered mental status suggests ineffective gas exchange or hypoperfusion.

Pulse oximetry may be falsely normal in CO poisoning or poor perfusion. Skin color is subjective and not as sensitive or specific as neurological status.

NEW QUESTION # 38

The most common finding in a patient who is experiencing a sickle cell crisis is

- A. Cardiac arrhythmia

- B. Pain
- C. Hypoxia
- D. Hypertension

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Sickle cell crisis(vaso-occlusive crisis) occurs when abnormally shaped red blood cells obstruct blood flow, leading to:

- * Severe localized or generalized pain(most common symptom)
- * Often in the back, chest, abdomen, or long bones

Hypoxia may be a contributing factor, but pain is the most reported reason for EMS activation. Cardiac arrhythmias and hypertension are not primary symptoms of sickle cell crisis.

NEW QUESTION # 39

When using the SALT method for triage, which of the following interventions should the EMT perform during the individual assessment step?

- A. Assessing respirations, administering two rescue breaths, and assessing patient mentation
- B. Completing first responder scorecards to track patients
- C. Insertion of airway adjuncts, bleeding control, and moving patients to the triage area
- D. Bleeding control, opening the airway, and administering two rescue breaths for pediatric patients

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

SALT(Sort, Assess, Lifesaving interventions, Treatment/Transport) is a mass casualty triage method recommended by the CDC and the National Association of EMS Physicians (NAEMSP). During the

"Assess" step, responders:

- * Check respirations
- * Provide lifesaving interventions such as rescue breaths if the patient is not breathing but has a pulse
- * Evaluate mentation(e.g., ability to follow commands)

Airway adjuncts and full transport do not happen at this stage. Scorecards and pediatric-specific modifications are addressed later in the protocol.

NEW QUESTION # 40

A 44-year-old patient with diabetes feels weak and dizzy. The EMT provides oral glucose and transports the patient to the hospital, where the patient recovers. The EMT tells their partner they did not provide the patient with a blanket because they felt the patient was wasting their time. What best describes the action the EMT took?

- A. Breach of ethics
- B. Breach of duty
- C. Battery
- D. Negligence

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Negligence occurs when an EMT:

- * Has a duty to act
- * Breaches that duty (e.g., by withholding basic care like warmth)
- * Causes harm or risk of harm
- * Establishes causation

The EMT's failure to treat the patient with respect and dignity - even if the patient improved - still constitutes negligence, especially if tied to a discriminatory or dismissive attitude.
