Quiz 2026 Salesforce Identity-and-Access-Management-Architect: Trustable Latest Salesforce Certified Identity and Access Management Architect Test Online

To attempt the Salesforce Identity-and-Access-Management-Architect exam optimally and ace it on the first attempt, proper exam planning is crucial. Since the Salesforce Identity-and-Access-Management-Architect exam demands a lot of time and effort, we designed the Salesforce Certified Identity and Access Management Architect (Identity-and-Access-Management-Architect) exam dumps in such a way that you won't have to go through sleepless study nights or disturb your schedule. Before starting the Salesforce Identity-and-Access-Management-Architect Preparation, plan the amount of time you will allot to each topic, determine the topics that demand more effort and prioritize the components that possess more weightage in the Salesforce Identity-and-Access-Management-Architect exam.

Salesforce Identity-and-Access-Management-Architect (IAM) certification exam is designed to test an individual's knowledge and skills in building and implementing secure and scalable identity and access management solutions on the Salesforce platform. Salesforce Certified Identity and Access Management Architect certification is intended for experienced architects and technical professionals who are responsible for designing and implementing identity and access management solutions for their organizations. Identity-and-Access-Management-Architect Exam covers a wide range of topics, including authentication, authorization, identity management, single sign-on (SSO), multi-factor authentication (MFA), and more.

Salesforce Certified Identity and Access Management Architect Sample

Questions (Q41-Q46):

NEW QUESTION # 41

An architect needs to set up a Facebook Authentication provider as login option for a salesforce customer Community. What portion of the authentication provider setup associates a Facebook user with a salesforce user?

- A. Consumer key and consumer secret
- B. Federation ID
- C. Apex registration handler
- D. User info endpoint URL

Answer: C

NEW QUESTION # 42

A security architect is rolling out a new multi-factor authentication (MFA) mandate, where all employees must go through a secure authentication process before accessing Salesforce. There are multiple Identity Providers (IdP) in place and the architect is considering how the "Authentication Method Reference" field (AMR) in the Login History can help.

Which two considerations should the architect keep in mind?

Choose 2 answers

- A. Dependency on what is supported by OpenID Connect (OIDC) implementation at IdP.
- B. AMR field shows the authentication methods used at IdP.
- C. High-assurance sessions must be configured under Session Security Level Policies.
- D. Both OIDC and Security Assertion Markup Language (SAML) are supported but AMR must be implemented at IdP.

Answer: B,D

Explanation:

Explanation

The AMR field in the Login History shows the authentication methods used at the IdP level, such as password, MFA, or SSO. Both OIDC and SAML are supported protocols for SSO, but the IdP must implement the AMR attribute and pass it to Salesforce.

NEW QUESTION # 43

Universal containers(UC) has implemented SAML-BASED single Sign-on for their salesforce application and is planning to provide access to salesforce on mobile devices using the salesforce1 mobile app. UC wants to ensure that single Sign-on is used for accessing the salesforce1 mobile app. Which two recommendations should the architect make? Choose 2 answers

- A. Use the existing SAML SSO flow along with user agent flow.
- B. Configure the embedded Web browser to use my domain URL.
- C. Use the existing SAML SSO flow along with Web server flow
- D. Configure the salesforce1 app to use the my domain URL

Answer: A,D

NEW QUESTION # 44

A group of userstry to access one of universal containers connected apps and receive the following error message: "Failed : Not approved for access". what is most likely to cause of the issue?

- A. The users do not have the correct permission set assigned to them
- B. The use of high assurance sections are required for the connected App.
- C. The salesforce administrators gave revoked the Oauth authorization.
- D. The connected App setting "All users may self-authorize" is enabled.

Answer: A

Explanation:

The users do not have the correct permission set assigned to them is the most likely cause of the issue. A connected app is a

framework that enables an external application to integrate with Salesforce using APIs and standard protocols, such as SAML, OAuth, and OpenID Connect¹. Connected apps use these protocols to authorize, authenticate, and provide single sign-on (SSO) for external apps¹. To access a connected app, users must have the appropriate permissions assigned to them, either through their profile or a permission set². If the users do not have the required permissions, they will receive an error message when they try to access the connected app. The use of high assurance sessions are required for the connected app is not a validation, as high assurance sessions are related to multi-factor authentication (MFA), not connected apps³. The connected app setting "All users may self-authorize" is enabled is not a cause of the issue, but a possible solution. This setting allows users to access the connected app without pre-approval from an administrator⁴. The Salesforce administrators have revoked the OAuth authorization is not a likely cause of the issue, as OAuth authorization is granted by the users, not the administrators⁵. Revoking OAuth authorization would also affect all users, not just a group of them.

NEW QUESTION # 45

Northern Trail Outfitters would like to automatically create new employee users in Salesforce with an appropriate profile that maps to its Active Directory Department.

How should an identity architect implement this requirement?

- A. Use the `updateUser` method in the Just-in-Time (JIT) provisioning registration handler to assign the appropriate profile.
- B. Use the `createUser` method in the Just-in-Time (JIT) provisioning registration handler to assign the appropriate profile.
- C. Use a login flow to collect Security Assertion Markup Language attributes and assign the appropriate profile during Just-In-Time (JIT) provisioning.
- D. Make a callout during the login flow to query department from Active Directory to assign the appropriate profile.

Answer: A

Explanation:

Explanation

To automatically create new employee users in Salesforce with an appropriate profile that maps to their Active Directory Department, the identity architect should use the `updateUser` method in the Just-in-Time (JIT) provisioning registration handler to assign the appropriate profile. JIT provisioning is a feature that allows Salesforce to create or update user records on the fly when users log in through an external identity provider, such as Active Directory. The `updateUser` method is a method in the `Auth.RegistrationHandler` interface that defines how to update an existing user in Salesforce based on the information from the external identity provider. The identity architect can use this method to assign the appropriate profile to the user based on their department attribute.
