Salesforce Health Cloud Accredited Professional Sample Questions (Q12-Q17):

NEW QUESTION # 12

Bloomington Caregivers want to offer its patients remote monitoring to bring data from patient devices into Health Cloud. Which set of records should an administrator populate to implement this functionality?

- A. Units of Measure, Remote Monitoring Device Types, Care Observations, Code Sets
- **B. Code Sets, Units of Measure, Care Metric Targets, Care Observations**
- C. Code Sets, Biometrics, Care Observations, Chart Metrics
- D. Units of Measure, Code Sets, Remote Monitoring Device Types, Care Episodes

Answer: B

NEW QUESTION # 13

How should a consultant at a large provider system model a patient in Health Cloud?

- A. Leverage Contact-Contact
- B. Configure Contact
- C. Configure Account
- **D. Leverage Person Account**

Answer: D

Explanation:

Step-by-Step

Person Account as Patient Model:

Salesforce Health Cloud is designed to leverage the Person Account model to represent patients, especially for large provider systems.

Exact Extract:

"Health Cloud uses person accounts to represent patients as individuals with whom you do business. Person accounts combine the functionality of accounts and contacts into a single record." Reference:

Why Not Other Options?

Account: Used for organizations, not individuals (patients).

Contact: Contacts are linked to Accounts; on their own, they don't support the full Health Cloud data model.

Contact-Contact: Not a recommended or documented model for patients in Health Cloud.

Conclusion:

To model a patient in Health Cloud, the Person Account model is the officially recommended approach.

NEW QUESTION # 14

When accessing a person account record within Health Cloud, the user must have access to the entire account.

What should a consultant do in this scenario, according to Health Cloud implementation best practice?

- A. Set Private for the Contact object.
- B. Set Modify All on the Account object at the Profile level.
- **C. Set Contacts to Controlled by Parent.**
- D. Set the organization-wide default to Public Read Write for the Account object.

Answer: C

Explanation:

In Salesforce Health Cloud, Person Accounts represent a combination of Account and Contact records. Ensuring that a user accessing a Person Account has appropriate access to both the Account and associated Contact is essential for seamless functionality.

Controlled by Parent Setting:

When Contacts are set to Controlled by Parent, the access to Contact records is directly inherited from the parent Account. This

simplifies access management, ensuring that if a user has access to the Account, they automatically gain equivalent access to its associated Contact records.

This approach aligns with Health Cloud's best practices for managing Person Accounts, where consistent access to both the Account and Contact components of a Person Account is crucial.

Why Not the Other Options?

A . Set Modify All on the Account object at the Profile level: This grants unrestricted access to all Account records, which may violate security and privacy principles, particularly in healthcare settings (e.g., HIPAA compliance).

B . Set Private for the Contact object: Setting Contacts to Private could restrict access to essential information within Person Accounts, contradicting the need for full access to the entire record.

D . Set the organization-wide default to Public Read Write for the Account object: This would expose all Account records to all users, creating significant data security risks.

Best Practice: Using Controlled by Parent ensures adherence to healthcare compliance standards while simplifying data visibility management within the Health Cloud ecosystem.

NEW QUESTION # 15

Which industry data standard should a consultant consider when designing interoperability with electronic health record (EHR) sources with Health Cloud?

- A. HL7 v1 Messaging
- B. Personal Health Record (PHR)
- C. FHIRR4
- D. Clinical Data Acquisition

Answer: A

NEW QUESTION # 16

A service cloud organization migrating to HC uses Contacts to represent patients, physicians and non-clinical staff. Which of these groups of contacts should be modeled as Person Accounts post-migration?

- A. Patients, physicians and non-clinical staff should be modeled as Person Accounts.
- B. None By using individual data model,the use of person account can be avoided
- C. Patients should be modeled as Person Accounts.Providers and non-clinical staff should be modeled as Contacts
- D. Patients should be modeled as Person Accounts.Providers and non-clinical staff can be modeled as Person Accounts or Contacts

Answer: C

NEW QUESTION # 17
