

Reliable Juniper JN0-683 Exam Vce | JN0-683 Online Exam

UNIT 6 TEST LET'S GO TO WORK!

Nagranie docwiczenia pl Kod: US2BCP A strona 1/3

GRUPA **A** Name: _____ Class: _____ Score: ____ / 40

LISTENING

1 Listen to the recording. Answer True (T) or False (F).
Posłuchaj nagrania. Zdecyduj, czy zdanie są prawdziwe (T) czy fałszywe (F).

- Jessica's party was great. T / F
- Alex loves heavy metal music. T / F
- The food at the party was delicious. T / F
- Alex was with two friends at the party. T / F
- Mark and his friends ordered pasta at an Italian restaurant. T / F

Score: ____ / 5

VOCABULARY

2 Choose the odd one out.
Zaznacz słowo, które nie pasuje do pozostałych.

- baker pilot receipt
- writer gym teacher
- plane bus driver vlogger
- pet-sitter cheap dentist
- writer mechanic café

Score: ____ / 5

3 Write the name of the job being described.
Wpisz nazwę odpowiedniego zawodu.

- An _____ works with computers. 
- A _____ cuts and styles people's hair. 
- A _____ helps people in a shop. 
- A _____ sings songs. 
- A _____ prepares and cooks dishes. 

Score: ____ / 5

Challenge is omnipresent like everywhere. By eliciting all necessary and important points into our JN0-683 practice engine, their quality and accuracy have been improved increasingly, so their quality is trustworthy and unquestionable. There is a bunch of considerate help we are willing to offer on our JN0-683 learning questions. If you have any question on downloading or opening the file, you can just contact us. And we will help you until you can use our JN0-683 exam prep.

Juniper JN0-683 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> VXLAN: This part requires knowledge of VXLAN, particularly how the control plane manages communication between devices, while the data plane handles traffic flow. Demonstrate knowledge of how to configure, Monitor, or Troubleshoot VXLAN.
Topic 2	<ul style="list-style-type: none"> EVPN-VXLAN Signaling: This section assesses an understanding of Ethernet VPN (EVPN) concepts, including route types, multicast handling, and Multiprotocol BGP (MBGP). It also covers EVPN architectures like CRB and ERB, MAC learning, and symmetric routing.

Topic 3

- Data Center Interconnect: For Data Center Engineers, this part focuses on interconnecting data centers, covering Layer 2 and Layer 3 stretching, stitching fabrics together, and using EVPN-signaled VXLAN for seamless communication between data centers.

2026 Reliable JN0-683 Exam Vce - Trustable Juniper Data Center, Professional (JNCIP-DC) - JN0-683 Online Exam

Our JN0-683 practice torrent offers you more than 99% pass guarantee, which means that if you study our JN0-683 materials by heart and take our suggestion into consideration, you will absolutely get the JN0-683 certificate and achieve your goal. Meanwhile, if you want to keep studying this course, you can still enjoy the well-rounded services by JN0-683 Test Prep, our after-sale services can update your existing JN0-683 study materials within a year and a discount more than one year.

Juniper Data Center, Professional (JNCIP-DC) Sample Questions (Q61-Q66):

NEW QUESTION # 61

You are designing an IP fabric for a large data center, and you are concerned about growth and scalability. Which two actions would you take to address these concerns? (Choose two.)

- A. Use OFX5700 Series devices as the super spines.
- B. Use EX4300 Series devices as the spine devices.
- C. Design a five-stage Clos IP fabric.
- D. Design a three-stage Clos IP fabric.

Answer: A,C

NEW QUESTION # 62

Exhibit.

Referring to the exhibit, which statement is correct?

- A. The MAC address is known but not reachable by the remote VTEP
- B. VNI 100 is not configured on the remote VTEP.
- C. The remote VTEP is not responding.
- D. The MAC address is unknown and not in the forwarding table of the remote VTEP.

Answer: D

Explanation:

* Analyzing the Exhibit Output:

* The command ping overlay tunnel-type vxlan is used to test the VXLAN tunnel between two VTEPs (VXLAN Tunnel Endpoints). The output shows a warning about missing hash parameters, but more importantly, it displays the result: End-System Not Present.

* Understanding the Response:

* The message End-System Not Present indicates that the remote VTEP (192.168.2.20) did not find the MAC address 00:00:5E:00:53:CC in its forwarding table. This typically means that the MAC address is unknown to the remote VTEP, and as a result, it could not forward the packet to the intended destination.

Conclusion:

* Option B: Correct - The MAC address is unknown and is not in the forwarding table of the remote VTEP, which is why the system reports that the "End-System" is not present.

NEW QUESTION # 63

You are deploying an IP fabric using EBGp and notice that your leaf devices are advertising and receiving all the routes. However, the routes are not installed in the routing table and are marked as hidden.

Which two statements describe how to solve the issue? (Choose two.)

- A. You need to configure multipath multiple-as.
- B. You need to configure as-override.
- C. You need to configure loops 2.
- D. You need to configure a next-hop self policy.

Answer: A,C

NEW QUESTION # 64

You are using EBGP peering in an underlay IP fabric.

Which two statements are correct in this scenario? (Choose two.)

- A. Every leaf node has one peering session to every spine node.
- B. Every leaf node has a peering session to every other leaf node.
- C. EBGP peering requires an IGP protocol for adjacency establishment.
- D. EBGP peering does not require an IGP protocol for adjacency establishment.

Answer: A,D

Explanation:

Every leaf node has one peering session to every spine node: In an EBGP peering setup within an underlay IP fabric, each leaf node typically establishes a single EBGP session with each spine node. This is a common design for scalability, as it ensures that the leaf nodes can exchange routing information with all spine nodes directly.

EBGP peering does not require an IGP protocol for adjacency establishment: EBGP (External BGP) peering in an underlay IP fabric does not require an IGP (Interior Gateway Protocol) such as OSPF or IS-IS to establish peering relationships. EBGP is used for establishing external routing between different ASes, and within a single AS, the peering is established directly between devices. This eliminates the need for an IGP for the actual EBGP session.

NEW QUESTION # 65

You want to convert an MX Series router from a VXLAN Layer 2 gateway to a VXLAN Layer 3 gateway for VNI 100. You have already configured an IRB interface. In this scenario, which command would you use to accomplish this task?

- A. set protocols ospf area 0.0.0.0 interface irb.100 passive
- B. set bridge-domains VLAN-100 routing-interface irb.100
- C. set vlans VLAN-100 13-interface irb.100
- D. set protocols isis interface irb.100 passive

Answer: B

NEW QUESTION # 66

.....

Our company has successfully launched the new version of the JN0-683 study materials. Perhaps you are deeply bothered by preparing the exam. Now, you can totally feel relaxed with the assistance of our study materials. Our products are reliable and excellent. What is more, the passing rate of our JN0-683 Study Materials is the highest in the market. Purchasing our JN0-683 study materials means you have been half success. Good decision is of great significance if you want to pass the exam for the first time.
