VCE4Plus has launched the M2 exam dumps with the collaboration of world-renowned professionals. International Code Council M2 exam study material has three formats: M2 PDF Questions, desktop International Code Council M2 practice test software, and a M2 web-based practice exam.

International Code Council Commercial Mechanical Inspector Sample

Questions (Q29-Q34):

NEW QUESTION # 29

Infrared radiant heaters shall be installed:

- A. in accordance with UL 2158.
- B. in accordance with UL 1240.
- C. with a 6-ft. clearance on all sides.
- D. with clearances from combustibile material in accordance with the manufacturer's installation instructions.

Answer: D

Explanation:

The ICC mechanical code provision for infrared radiant heaters states that the heaters must be installed with clearances from combustibile material in accordance with the manufacturer's installation instructions .

That makes Option D the correct answer. The code does not establish a blanket 6-foot clearance on all sides in this section, and the exam expects the candidate to rely on the listed installation requirements for the appliance.

NEW QUESTION # 30

All exposed gas piping shall be kept above grade a minimum of _____ inches.

- A. 3.5
- B. 8.5
- C. 0
- D. 1

Answer: A

Explanation:

The IFGC rule for above-ground outdoor piping requires piping installed outdoors to be elevated not less than 3 1/2 inches above ground , and where installed across roof surfaces, not less than 3 1/2 inches above the roof surface . Therefore, the correct answer is A .

NEW QUESTION # 31

Floor furnaces shall not be closer than _____ inches to the ground.

- A. [option text not fully visible in the material you sent]
- B. 0
- C. [option text not fully visible in the material you sent]
- D. [option text not fully visible in the material you sent]

Answer: C

Explanation:

The ICC mechanical code requires the lowest portion of a floor furnace to have not less than 6 inches (152 mm) clearance from grade level . Therefore, the correct choice is the option corresponding to 6 inches , which is C based on your answer set.

NEW QUESTION # 32

When a permit is issued, the code requires that one set of approved plans and specifications be returned to the applicant.

This set of plans and specifications shall be:

- A. returned to the architect.
- B. kept on the building site.
- C. retained by the applicant for at least one year after the job is finished in the event modifications are made.
- D. filed with the county clerk or jurisdiction to properly record the property.

Answer: B

Explanation:

Under the ICC administrative provisions used with the mechanical code, one approved set is retained by the code official, and one approved set is returned to the applicant. The returned set must be kept on the site of the building or job while the authorized work is in progress. That directly matches Option A . It does not require return to the architect, filing with the county clerk, or retention for one year after completion.

NEW QUESTION # 33

What is the minimum air velocity that must be provided by an exhaust duct system serving a Type I range hood?

- A. 500 CFM
- B. 2,500 FPM
- C. 1,500 FPM
- D. 500 FPM

Answer: C

Explanation:

For commercial kitchen exhaust associated with Type I hood systems, the recognized code-based minimum duct transport velocity is 1,500 feet per minute , so C is the correct answer. Option B uses the wrong unit, and the other listed velocities do not match the code minimum used for this question type.

NEW QUESTION # 34

.....

We provide a wide range of learning and preparation methodologies to the customers for the M2 complete training. After using the M2 products, success would surely be the fate of customer because, self-evaluation, highlight of the mistakes, time management and sample question answers in comprehensive manner, are all the tools which are combined to provide best possible results.
