# Marvelous Palo Alto Networks XSOAR-Engineer Reliable Braindumps Free | Try Free Demo before Purchase

As you all know that practicing with the wrong preparation material will waste your valuable money and many precious study hours. So you need to choose the most proper and verified preparation material with caution. Preparation material for the Palo Alto Networks XSOAR Engineer (XSOAR-Engineer) exam questions from Test4Sure helps to break down the most difficult concepts into easy-to-understand examples. Also, you will find that all the included questions are based on the last and updated XSOAR-Engineer exam dumps version.

Palo Alto Networks XSOAR-Engineer Exam Syllabus Topics:

Topic	Details
Topic 1	• Planning, Installation, and Maintenance: This domain covers system setup and administration including authentication configuration, engine deployment, dev • prod environment planning, Marketplace pack management, integration instance configuration, and system maintenance.
Topic 2	• Playbook Development: This domain addresses automation through playbook creation including task configuration, context data manipulation, various task types, sub-playbooks with looping, filters and transformers, debugger usage, built-ins and scripts, automation script creation, and job management.
Topic 3	• Threat Intelligence Management: This domain focuses on threat intelligence operations including indicator creation and configuration, indicator relationships, enrichment with source reliability, external intelligence sharing, and exclusion list management.
Topic 4	• Use Case Planning and Development: This domain focuses on designing security use cases through incident and indicator lifecycle management, field and layout customization, classifier and mapper configuration, incident creation methods, pre • post-processing, and incident type configuration with playbooks, layouts, SLAs, and lists.
Topic 5	• Incident Interactions and Reporting: This domain covers incident operations including states and actions, War Room activities, incident relationships, and dashboard and report configuration for metrics and visualization.

XSOAR-Engineer Reliable Braindumps Free | Palo Alto Networks Simulated XSOAR-Engineer Test: Palo Alto Networks XSOAR Engineer Finally Passed

While the Palo Alto Networks XSOAR-Engineer practice questions pdf can help you learn all the relevant answers for the Palo Alto Networks XSOAR Engineer, Test4Sure also provides an online Sitecore Practice Test engine to enhance your confidence and

skills. This practice test engine is an effective tool for both learning and practicing Palo Alto Networks XSOAR-Engineer Exam.

Palo Alto Networks XSOAR Engineer Sample Questions (Q177-Q182):

NEW QUESTION # 177

Assuming an incident type configuration runs the associated playbook automatically, which pre-process rule action can preserve matching incidents without triggering the playbook?.

- A. Close.
- B. Link.
- C. Update.
- D. Drop.

Answer: B

Explanation:

Pre-process rules allow XSOAR to evaluate incoming events before they are fully created as incidents. These rules can suppress, modify, or relate events based on defined criteria. According to the Admin Guide, when a pre-process rule uses the Link action, XSOAR links the incoming event to an existing incident without triggering the standard incident creation process or subsequent playbook execution. This preserves the data for correlation and investigation while preventing duplicate or unnecessary playbook runs.

The Close action (A) suppresses incidents completely and is used to auto-close unwanted events; this prevents preservation of the event and does not trigger the playbook. The Drop action (C) discards incoming events entirely, removing them from the system and not preserving them. The Update action (B) modifies or enriches existing incidents but does not stop the playbook from running on newly created incidents of that type.

Because the requirement is to preserve the incident while also preventing automatic playbook execution, the Link action is the only workflow that fulfills both requirements according to XSOAR's pre-process rule architecture. Thus, option D is correct.

NEW QUESTION # 178

A playbook task generates a report as HTML in the context data.

An engineer creates a custom indicator field of type "HTML" and adds the field to a section in a custom indicator layout. How can the engineer populate the HTML field in the indicator layout?

- A. Create a custom Indicator Mapper and populate the custom indicator field.
- B. Populate the custom indicator field with the built-in !SetIndicator command.
- C. Use the Mapping option in the playbook task that generates the HTML report to populate the custom indicator field.
- D. Add HTML to a list using !setList and use it as an HTML template to populate the custom indicator field.

Answer: C

NEW QUESTION # 179

When is the post-processing script executed in XSOAR?

- A. Just after the playbook is executed
- B. Just after the incident is created
- C. Just after the Close Incident button is clicked
- D. Just after the pre-processing is executed

Answer: A

NEW QUESTION # 180

Which two options may be added when a content pack is being installed? (Choose two.)

- A. Indicator layouts
- B. Roles
- C. Lists
- D. Other content packs

Answer: B,C

NEW QUESTION # 181
How long is the trial period for paid content packs?

- A. 7 days
- B. 14 days
- C. 60 days
- D. 30 days

Answer: D
