### 최신 SAP Certified Associate C\_SIGVT\_2506 무료샘플문제 (Q27-Q32):

#### 질문 # 27

What is one of the primary goals of the RISE with SAP Methodology?

- A. Ensure predictable implementation and clean core adherence
- B. Reduce the number of SAP systems
- C. Eliminate partner involvement
- D. Drive support automation

정답: A

#### 설명:

The RISE with SAP methodology emphasizes delivering transformation projects in a predictable, repeatable, and quality-assured manner. A central focus of this methodology is enforcing clean core principles, which prevent unnecessary modifications and ensure systems remain easy to upgrade and extend. The structured phases, quality gates, and integrated toolchain all support predictable outcomes. The methodology does not aim to reduce system count or eliminate partners; instead, it ensures guided, standardized, and clean implementations.

#### 질문 # 28

What analysis does SAP Signavio support to compare company performance with peers?

- A. Value discovery
- B. Performance benchmarking
- C. SWOT analysis
- D. Regression modelling

정답: B

#### 설명:

SAP Signavio includes powerful benchmarking tools that allow organizations to compare their business process performance with internal and external peers. This capability, known as performance benchmarking, provides insights into how an organization's process KPIs—such as cycle times, automation rates, exception ratios, throughput, or backlog levels—measure up against industry standards or best-in-class performers. Performance benchmarking helps identify whether processes are lagging behind competitors or operating efficiently relative to market expectations.

Through SAP Signavio Process Insights and Process Intelligence, businesses can analyze large volumes of operational data to pinpoint where bottlenecks occur and identify root causes of inefficiency. Benchmarking goes beyond simple reporting by categorizing processes into performance segments and highlighting improvement potential. These insights are particularly valuable during transformation planning, as they guide prioritization and help justify investment decisions by quantifying the potential value of change.

Options A, B, and D do not represent benchmarking. Value discovery identifies opportunities, regression modeling is statistical analysis not used in this context, and SWOT is a strategic planning tool unrelated to system process analytics. Thus, performance benchmarking is the correct and recognized approach in SAP Signavio for comparing company performance with peers.

#### 질문 # 29

What ensures that architecture documentation is aligned with business capability goals?
