

2026 Professional-Cloud-Security-Engineer Actualtest | High Pass-Rate Free Professional-Cloud-Security-Engineer Brain Dumps: Google Cloud Certified - Professional Cloud Security Engineer Exam

What's more, part of that Actual4Exams Professional-Cloud-Security-Engineer dumps now are free: <https://drive.google.com/open?id=1yutgMBWLqmwtfKk6aPXxq4aDG0P31RsF>

As our loyal customer, some of them will choose different types of Professional-Cloud-Security-Engineer study materials on our website. As you can see, they still keep up with absorbing new knowledge of our Professional-Cloud-Security-Engineer training questions. Once you cultivate the good habit of learning our study materials, you will benefit a lot and keep great strength in society. Also, our Professional-Cloud-Security-Engineer practice quiz has been regarded as the top selling products in the market. We have built our own reputation in the market.

All the real Professional-Cloud-Security-Engineer questions are included in the Google Cloud Certified - Professional Cloud Security Engineer Exam (Professional-Cloud-Security-Engineer) PDF Dumps files. This file is compatible with smart devices. The Google PDF Dumps files are portable and printable, allowing candidates to study and prepare for the Professional-Cloud-Security-Engineer exam from anywhere, even on smartphones, laptops, and tablets. Moreover, Actual4Exams regularly updates its Google Cloud Certified - Professional Cloud Security Engineer Exam (Professional-Cloud-Security-Engineer) PDF questions format to keep up with the changes in the Google Cloud Certified - Professional Cloud Security Engineer Exam (Professional-Cloud-Security-Engineer) exam content, ensuring that its Google Cloud Certified - Professional Cloud Security Engineer Exam (Professional-Cloud-Security-Engineer) exam questions are up-to-date and relevant.

Free Professional-Cloud-Security-Engineer Brain Dumps - Exams Professional-Cloud-Security-Engineer Torrent

Do you want to pass your Google Cloud Certified - Professional Cloud Security Engineer Exam exam? If so, Actual4Exams is the ideal place to begin. Actual4Exams provides comprehensive Professional-Cloud-Security-Engineer exam questions preparation in two simple formats: a pdf file format and an Google Professional-Cloud-Security-Engineer online practice test engine. If you fail your Google Cloud Certified - Professional Cloud Security Engineer Exam (Professional-Cloud-Security-Engineer) Exam, you can obtain a full refund and a 20% discount! Continue reading to discover more about the essential aspects of these excellent Professional-Cloud-Security-Engineer exam questions.

Google Cloud Certified - Professional Cloud Security Engineer Exam Sample Questions (Q277-Q282):

NEW QUESTION # 277

You are deploying a web application hosted on Compute Engine. A business requirement mandates that application logs are preserved for 12 years and data is kept within European boundaries. You want to implement a storage solution that minimizes overhead and is cost-effective. What should you do?

- A. Configure a custom retention policy of 12 years on your Google Cloud's operations suite log bucket in the EUROPE-WEST1 region.
- B. Use a Pub/Sub topic to forward your application logs to a Cloud Storage bucket in the EUROPE-WEST1 region.
- **C. Configure your Compute Engine instances to use the Google Cloud's operations suite Cloud Logging agent to send application logs to a custom log bucket in the EUROPE-WEST1 region with a custom retention of 12 years.**
- D. Create a Cloud Storage bucket to store your logs in the EUROPE-WEST1 region. Modify your application code to ship logs directly to your bucket for increased efficiency.

Answer: C

NEW QUESTION # 278

A customer's company has multiple business units. Each business unit operates independently, and each has their own engineering group. Your team wants visibility into all projects created within the company and wants to organize their Google Cloud Platform (GCP) projects based on different business units. Each business unit also requires separate sets of IAM permissions.

Which strategy should you use to meet these needs?

- A. Assign GCP resources in a project, with a label identifying which business unit owns the resource.
- **B. Create an organization node, and assign folders for each business unit.**
- C. Assign GCP resources in a VPC for each business unit to separate network access.
- D. Establish standalone projects for each business unit, using gmail.com accounts.

Answer: B

Explanation:

To organize GCP projects based on different business units and manage IAM permissions, you should create an organization node and assign folders for each business unit. This approach allows you to logically separate projects under folders and apply IAM policies at the folder level.

Step-by-Step:

- * Create Organization Node: Ensure that your GCP account is linked to an organization.
- * Create Folders for Business Units:
- * Navigate to the GCP Console > IAM & Admin > Resource Manager.
- * Create a folder for each business unit under the organization node.
- * Move Projects to Folders:
- * Move existing projects into the respective folders according to the business unit.
- * Set IAM Policies:
- * Assign IAM roles and permissions at the folder level to manage access for each business unit independently.
- * Monitor and Manage: Use Cloud Audit Logs and other GCP tools to monitor the activities and ensure compliance with the organization's policies.

Creating and Managing Folders

Managing IAM Policies

NEW QUESTION # 279

Your company has deployed an application on Compute Engine. The application is accessible by clients on port 587. You need to balance the load between the different instances running the application. The connection should be secured using TLS, and terminated by the Load Balancer.

What type of Load Balancing should you use?

- A. Network Load Balancing
- B. HTTP(S) Load Balancing
- **C. SSL Proxy Load Balancing**
- D. TCP Proxy Load Balancing

Answer: C

Explanation:

<https://cloud.google.com/load-balancing/docs/ssl> - SSL Proxy Load Balancing is a reverse proxy load balancer that distributes SSL traffic coming from the internet to virtual machine (VM) instances in your Google Cloud VPC network.

Reference: <https://cloud.google.com/load-balancing/docs/ssl/>

NEW QUESTION # 280

You recently joined the networking team supporting your company's Google Cloud implementation. You are tasked with familiarizing yourself with the firewall rules configuration and providing recommendations based on your networking and Google Cloud experience. What product should you recommend to detect firewall rules that are overlapped by attributes from other firewall rules with higher or equal priority?

- A. VPC Flow Logs
- **B. Firewall Insights**
- C. Firewall Rules Logging
- D. Security Command Center

Answer: B

NEW QUESTION # 281

You are tasked with exporting and auditing security logs for login activity events for Google Cloud console and API calls that modify configurations to Google Cloud resources. Your export must meet the following requirements:

Export related logs for all projects in the Google Cloud organization.

Export logs in near real-time to an external SIEM.

What should you do? (Choose two.)

- A. Ensure that the SIEM processes the AuthenticationInfo field in the audit log entry to gather identity information.
- B. Enable Google Workspace audit logs to be shared with Google Cloud in the Admin Console.
- C. Create a Log Sink at the organization level with a Pub/Sub destination.
- **D. Create a Log Sink at the organization level with the includeChildren parameter, and set the destination to a Pub/Sub topic.**
- **E. Enable Data Access audit logs at the organization level to apply to all projects.**

Answer: D,E

Explanation:

To meet the requirements for exporting and auditing security logs in near real-time for login activity events and API calls:

* Organization-Level Log Sink with Pub/Sub: Create a log sink at the organization level to ensure logs from all projects are captured. Use the includeChildren parameter to include logs from all child resources (projects). Set the destination to a Pub/Sub topic to facilitate near real-time log export to an external SIEM.

* Enable Data Access Audit Logs: Enable Data Access audit logs at the organization level to capture and export detailed information about API calls that modify configurations of Google Cloud resources across all projects.

These steps ensure comprehensive logging and real-time export capabilities, which are crucial for security auditing and monitoring.
