

# New ISTQB-CTFL Valid Dumps Book | Valid ISTQB ISTQB-CTFL: ISTQB Certified Tester Foundation Level (CTFL v4.0) 100% Pass

P.S. Free 2026 ISTQB ISTQB-CTFL dumps are available on Google Drive shared by Exam4Tests:  
<https://drive.google.com/open?id=114fwGp5GBbmPmk41Uq902D2lIO3rq0l8>

Exam4Tests offers a free demo of ISTQB ISTQB-CTFL exam dumps before the purchase to test the features of the products. Exam4Tests also offers 12 months of free ISTQB ISTQB-CTFL Exam Questions updates if the ISTQB-CTFL certification exam content changes after purchasing our ISTQB-CTFL exam dumps.

More and more people hope to enhance their professional competitiveness by obtaining ISTQB certification. However, under the premise that the pass rate is strictly controlled, fierce competition makes it more and more difficult to pass the ISTQB-CTFL examination. In order to guarantee the gold content of the ISTQB-CTFL certification, the official must also do so. However, it is an indisputable fact that a large number of people fail to pass the ISTQB-CTFL examination each year. Perhaps it was because of the work that there was not enough time to learn, or because the lack of the right method of learning led to a lot of time still failing to pass the exam. Whether you are the first or the second or even more taking ISTQB-CTFL Exam, ISTQB-CTFL study materials are accompanied by high quality and efficient services so that they can solve all your problems. Passing the exam once will no longer be a dream.

## Free PDF 2026 ISTQB First-grade ISTQB-CTFL: ISTQB Certified Tester Foundation Level (CTFL v4.0) Valid Dumps Book

Now, do you want to enjoy all these ISTQB ISTQB-CTFL Exam benefits? Looking for a simple and quick way to pass the ISTQB Certified Tester Foundation Level (CTFL v4.0) (ISTQB-CTFL) exam? If your answer is yes then you do not need to worry about it. Just visit the "Exam4Tests" exam questions and download "Exam4Tests" exam questions and start preparation right now.

## ISTQB Certified Tester Foundation Level (CTFL v4.0) Sample Questions (Q308-Q313):

### NEW QUESTION # 308

Which of the following BEST explains a drawback of independent testing?

- A. Having the business organization participate as an independent test team can hurt the overall testing effort since business participants are often not trained nor experienced in testing
- B. An independent test team may possess specializations in specific test types such as usability or security which detract from the overall effectiveness of the test team
- C. Due to their differing backgrounds and perspectives, an independent test team may discover defects which the developers did not uncover
- **D. An independent test team may be isolated from the rest of the development and project team**

**Answer: D**

Explanation:

Independent testing offers several advantages, such as unbiased testing and detection of different defects. However, a drawback is that an independent test team may be isolated from the development team and project team. This can lead to communication gaps, reduced collaboration, and a lack of understanding of the project context.

According to the ISTQB Certified Tester Foundation Level (CTFL) syllabus v4.0, an independent test team may not have the same level of understanding of the system as the development team, leading to potential issues in communication and integration (ISTQB not-for-profit association).

### NEW QUESTION # 309

In which of the following cases you would NOT execute maintenance testing?

- A. Migration of the system data to a replacement system
- B. Modifications to a released software or system
- C. Retirement of the software or system
- **D. Update to the Maintainability requirements during the development phase**

**Answer: D**

Explanation:

Maintenance testing is testing performed on a software product after delivery to correct defects or improve performance or other attributes. Maintenance testing can be triggered by various situations, such as modifications to a released software or system, migration of the system data to a replacement system, or retirement of the software or system. Maintenance testing is not executed when there is an update to the maintainability requirements during the development phase, as this is not a maintenance situation but rather a change request that should be handled by the development process. Verified References: [A Study Guide to the ISTQB® Foundation Level 2018 Syllabus - Springer], Chapter 2, page 18-19.

### NEW QUESTION # 310

Which of the following statements is not correct?

- A. Testing is often seen as a destructive activity instead of constructive activity
- B. Identifying defects may be perceived as criticism against product
- C. Looking for defects in system requires professional pessimism and curiosity
- **D. Looking for defects in a system may require Ignoring system details**

**Answer: D**

Explanation:

\* Looking for defects in a system does not require ignoring system details, but rather paying attention to them and understanding how they affect the system's quality, functionality, and usability. Ignoring system details could lead to missing important defects or testing irrelevant aspects of the system.

\* Identifying defects may be perceived as criticism against product, especially by the developers or stakeholders who are invested in the product's success. However, identifying defects is not meant to be a personal attack, but rather a constructive feedback that helps to improve the product and ensure its alignment with the requirements and expectations of the users and clients.

\* Looking for defects in system requires professional pessimism and curiosity, as testers need to anticipate and explore the possible ways that the system could fail, malfunction, or behave unexpectedly.

Professional pessimism means being skeptical and critical of the system's quality and reliability, while curiosity means being eager and interested in finding out the root causes and consequences of the defects.

\* Testing is often seen as a destructive activity instead of constructive activity, as it involves finding and reporting the flaws and weaknesses of the system, rather than creating or enhancing it. However, testing is actually a constructive activity, as it contributes to the system's improvement, verification, validation, and optimization, and ultimately to the delivery of a high-quality product that meets the needs and expectations of the users and clients.

#### NEW QUESTION # 311

Which of the following project scenario gives the BEST example where maintenance testing should be triggered?

- A. Defect was found in a pre-released version of the customer service application
- B. Release of the early draft of the low level project design of an IoT application
- C. Completion of architecture of the bank system
- D. Delivery of the hot fix to mobile operating system and ensuring that it still works

**Answer: D**

Explanation:

Maintenance testing is triggered by changes such as bug fixes, enhancements, or environmental changes.

Option A: "Completion of architecture of the bank system" is not a typical scenario for maintenance testing, as it describes a design phase rather than an operational change.

Option B: "Release of the early draft of the low level project design of an IoT application" is again not suitable for maintenance testing, as it refers to the design phase.

Option C: "Defect was found in a pre-released version of the customer service application" is closer but not quite accurate, as maintenance testing focuses on changes mad (ISTQB not-for-profit association)system is released.

Option D: "Delivery of the hot fix to mobile operating system and ensuring that it still works" is the best example as it directly involves testing after a fix has been implemented.

Therefore, the correct answer is D 【6 source】 .

#### NEW QUESTION # 312

Out of the following. what is not needed to specify in defect report?

- A. How to fix the defect
- B. Test environment details
- C. Severity and priority
- D. How to reproduce the defect

**Answer: A**

Explanation:

A defect report is a document that records the details of a defect found during testing. A defect report typically contains the

following items:

- \* Identifier: A unique identifier for the defect report
- \* Summary: A concise summary of the defect
- \* Description: A detailed description of the defect, including the steps to reproduce it, the expected and actual results, and any relevant screenshots or logs
- \* Severity: The degree of impact that the defect has on the system
- \* Priority: The level of urgency for resolving the defect
- \* Status: The current state of the defect, such as new, open, resolved, closed, etc.
- \* Resolution: The action taken to resolve the defect, such as fix, workaround, reject, etc. Out of these items, the one that is not needed to specify in a defect report is how to fix the defect. How to fix the defect is a technical solution that is usually determined by the developer who is assigned to resolve the defect. How to fix the defect is not part of the defect report, but rather part of the code change or patch that is delivered to fix the defect. The other items are needed to specify in a defect report, as they provide essential information for identifying, tracking and resolving defects.
