

DP-600 Dump Collection | Detailed DP-600 Answers

BONUS!!! Download part of Dumps4PDF DP-600 dumps for free: https://drive.google.com/open?id=19QHt2sAFP2tK_Flp4_IYFHdcNtNNnvL

If you have time to know more about our DP-600 study materials, you can compare our study materials with the annual real questions of the exam. In addition, we will try our best to improve our hit rates of the DP-600 exam questions. You will not wait for long to witness our great progress. It is worth fighting for your promising future with the help of our DP-600 learning guide. As you can see that our DP-600 training braindumps are the best seller in the market.

Microsoft DP-600 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Maintain a data analytics solution: This section of the exam measures the skills of administrators and covers tasks related to enforcing security and managing the Power BI environment. It involves setting up access controls at both workspace and item levels, ensuring appropriate permissions for users and groups. Row-level, column-level, object-level, and file-level access controls are also included, alongside the application of sensitivity labels to classify data securely. This section also tests the ability to endorse Power BI items for organizational use and oversee the complete development lifecycle of analytics assets by configuring version control, managing Power BI Desktop projects, setting up deployment pipelines, assessing downstream impacts from various data assets, and handling semantic model deployments using XMLA endpoint. Reusable asset management is also a part of this domain.
Topic 2	<ul style="list-style-type: none">Prepare data: This section of the exam measures the skills of engineers and covers essential data preparation tasks. It includes establishing data connections and discovering sources through tools like the OneLake data hub and the real-time hub. Candidates must demonstrate knowledge of selecting the appropriate storage type—lakehouse, warehouse, or eventhouse—depending on the use case. It also includes implementing OneLake integrations with Eventhouse and semantic models. The transformation part involves creating views, stored procedures, and functions, as well as enriching, merging, denormalizing, and aggregating data. Engineers are also expected to handle data quality issues like duplicates, missing values, and nulls, along with converting data types and filtering. Furthermore, querying and analyzing data using tools like SQL, KQL, and the Visual Query Editor is tested in this domain.
Topic 3	<ul style="list-style-type: none">Implement and manage semantic models: This section of the exam measures the skills of architects and focuses on designing and optimizing semantic models to support enterprise-scale analytics. It evaluates understanding of storage modes and implementing star schemas and complex relationships, such as bridge tables and many-to-many joins. Architects must write DAX-based calculations using variables, iterators, and filtering techniques. The use of calculation groups, dynamic format strings, and field parameters is included. The section also includes configuring large semantic models and designing composite models. For optimization, candidates are expected to improve report visual and DAX performance, configure Direct Lake behaviors, and implement incremental refresh strategies effectively.

Free PDF 2026 Microsoft Accurate DP-600 Dump Collection

Life is short for each of us, and time is precious to us. Therefore, modern society is more and more pursuing efficient life, and our DP-600 Study Materials are the product of this era, which conforms to the development trend of the whole era. It seems that we have been in a state of study and examination since we can remember, and we have experienced countless tests, including the qualification examinations we now face. In the process of job hunting, we are always asked what are the achievements and what certificates have we obtained?

Microsoft Implementing Analytics Solutions Using Microsoft Fabric Sample Questions (Q125-Q130):

NEW QUESTION # 125

You have a Fabric workspace that contains a warehouse named DW1. DW1 contains the following tables and columns.

Table name	Column name
SalesOrderDetail	ProductID
SalesOrderDetail	ModifiedDate
SalesOrderDetail	OrderQty
Product	ProductID
Product	Name

You need to summarize order quantities by year and product. The solution must include the yearly sum of order quantities for all the products in each row.

How should you complete the T-SQL statement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

```
SELECT YEAR(SO.ModifiedDate) AS OrderDate
      ,P.Name
      ,CAST(SUM(SO.OrderQty) AS INT) AS OrderQty
  FROM [dbo].[SalesOrderDetail] SO
  INNER JOIN [dbo].[Product] P
    ON P.ProductID = SO.ProductID
 GROUP BY ROLLUP(YEAR(SO.ModifiedDate), P.Name)
        ,CUBE(YEAR(SO.ModifiedDate), P.Name)
        ,GROUPING SETS ((YEAR(SO.ModifiedDate), P.Name), (YEAR(SO.ModifiedDate)))
        ,ROLLUP(YEAR(SO.ModifiedDate), P.Name)
        ,YEAR(SO.ModifiedDate), P.Name
```

Answer:

Explanation:

Answer Area

```
SELECT [YEAR] (SO.ModifiedDate) AS OrderDate
      ,P.Name
      ,CAST
      ,CONVERT
      ,SUM(SO.OrderQty) AS OrderQty
  FROM [dbo].[SalesOrderDetail] SO
  INNER JOIN [dbo].[Product] P
    ON P.ProductID = SO.ProductID
 GROUP BY
    ROLLUP([YEAR(SO.ModifiedDate), P.Name])
  OR
    CUBE([YEAR(SO.ModifiedDate), P.Name])
  OR
    GROUPING SETS ((YEAR(SO.ModifiedDate), P.Name), (YEAR(SO.ModifiedDate)))
  OR
    ROLLUP([YEAR(SO.ModifiedDate), P.Name])
  OR
    [YEAR(SO.ModifiedDate), P.Name]
```

Explanation:

```
SELECT [YEAR] (SO.ModifiedDate) AS OrderDate
      ,P.Name AS ProductName
      ,SUM(SO.OrderQty) AS OrderQty
  FROM [dbo].[SalesOrderDetail] SO
  INNER JOIN [dbo].[Product] P
    ON P.ProductID = SO.ProductID
 GROUP BY
    ROLLUP([YEAR(SO.ModifiedDate), P.Name])
 ORDER BY OrderDate
```

NEW QUESTION # 126

Which type of data store should you recommend in the AnalyticsPOC workspace?

- A. a data lake
- **B. a lakehouse**
- C. an external Hive metaStore
- D. a warehouse

Answer: B

NEW QUESTION # 127

You have a Microsoft Power BI Premium Per User (PPU) workspace that contains a semantic model.

You have an Azure App Service app named App1 that modifies row-level security (RLS) for the model by using the XMLA endpoint.

App1 requires users to sign in by using their Microsoft Entra credentials to access the XMLA endpoint.

You need to configure App1 to use a service account to access the model.

What should you do first?

- A. Add a managed identity to the workspace.
- B. Modify the XMLA Endpoint setting.
- C. Upgrade the workspace to Premium capacity.
- **D. Add a managed identity to App1.**

Answer: D

Explanation:

Adding a managed identity to App1 will allow it to authenticate and access resources securely without needing to manage credentials explicitly. This is the first step in configuring the app to use a service account for accessing the model via the XMLA endpoint.

NEW QUESTION # 128

You have a Fabric tenant that contains a complex semantic model. The model is based on a star schema and contains many tables, including a fact table named Sales. You need to create a diagram of the model. The diagram must contain only the Sales table and related tables. What should you use from Microsoft Power BI Desktop?

- A. Data view
- B. Model view
- C. data categories
- D. DAX query view

Answer: B

Explanation:

To create a diagram that contains only the Sales table and related tables, you should use the Model view (C) in Microsoft Power BI Desktop. This view allows you to visualize and manage the relationships between tables within your semantic model. Reference = Microsoft Power BI Desktop documentation outlines the functionalities available in Model view for managing semantic models.

NEW QUESTION # 129

You have a Fabric tenant.

You need to configure OneLake security for users shown in the following table.

Name	Required access
Microsoft	Read all the Spark data.
User2	Read all the SQL endpoint data.

The solution must follow the principle of least privilege.

Which permission should you assign to each user? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Microsoft

User1:

- ReadAll
- Read
- ReadAll
- ReadData

User2:

- ReadData
- Read
- ReadAll
- ReadData

Answer:

Explanation:

Answer Area

User1:

- ReadAll
- Read
- ReadAll
- ReadData

User2:

- ReadData
- Read
- ReadAll
- ReadData

NEW QUESTION # 130

To learn more about our DP-600 exam braindumps, feel free to check our Microsoft Exam and Certifications pages. You can browse through our DP-600 certification test preparation materials that introduce real exam scenarios to build your confidence further. Choose from an extensive collection of products that suits every DP-600 Certification aspirant. You can also see for yourself how effective our methods are, by trying our free demo. So why choose other products that can't assure your success? With Dumps4PDF, you are guaranteed to pass DP-600 certification on your very first try.
