# Updated HPE7-A06 Valid Exam Registration | Easy To Study and Pass Exam at first attempt & High-quality HP HPE Campus Access Switching Expert Written Exam

DOWNLOAD the newest Prep4sureExam HPE7-A06 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1C30ZDzX64Wv6VN1wfe_sOLnMhfZKZ2SA

One of the most effective strategies to prepare for the HPE Campus Access Switching Expert Written Exam (HPE7-A06) exam successfully is to prepare with actual HP HPE7-A06 exam questions. It would be difficult for the candidates to pass the HPE7-A06 exam on the first try if the HPE7-A06 study materials they use are not updated. Studying with invalid HPE7-A06 practice material results in a waste of time and money. Therefore, updated HP HPE7-A06 practice questions are essential for the preparation of the HPE7-A06 exam.

Many candidates may think that it will take a long time to prapare for the HPE7-A06 exam. Actually, it only takes you about twenty to thirty hours to practice our HPE7-A06 exam simulation. We believe that the professional guidance will help you absorb the knowledge quickly. You will have a wide range of chance after obtaining the HPE7-A06 certificate. You need to have a brave attempt. Our HPE7-A06 training engine will help you realize your dreams.

Free PDF 2026 HP Latest HPE7-A06: HPE Campus Access Switching Expert Written Exam Valid Exam Registration

You don't need to worry about wasting your precious time but failing to get the HPE7-A06 certification. Many people have used our

HPE7-A06 study materials and the pass rate of the exam is 99%. This means as long as you learn with our HPE7-A06 Practice Guide, you will pass the exam without doubt. And we will give you one year's free update of the exam study materials you purchase and 24/7 online service. Now just make up your mind and get your HPE7-A06 exam dumps!

HPE Campus Access Switching Expert Written Exam Sample Questions (Q10-Q15):

NEW QUESTION # 10
Security administrators are complaining about the number if HPE Aruba Networking ClearPass Access Tracker events from the user 'radius-test'. Given the configuration below, hao can the number of events be reduced?

- A. Decrease the tracking retries.
- B. Increase the tracking interval.
- C. Configure 'any' tracking mode.
- D. Configure 'dead-only' tracking mode.

Answer: D

Explanation:
The configuration shown enables RADIUS server tracking using the test user radius-test. By default, this generates continuous Access Tracker events because every probe attempt is logged.
To reduce the number of events, the tracking mode should be changed to dead-only, which limits authentication probes to when the RADIUS server is marked as unreachable. This way, ClearPass only sees test authentications when a failure condition occurs, significantly reducing unnecessary log entries.

NEW QUESTION # 11
Match each BGP element to its description.

Answer:

Explanation:
Explanation:
This question requires matching BGP protocol elements (mostly message types) to their primary function or description.
* OPEN Message:This is the first message sent after the TCP connection is established between BGP peers. Routers exchange OPEN messages to negotiate session parameters (AS Number, Hold Time, Router ID, Capabilities). A successful exchange leads to session establishment.
* Matches:"sets up and establishes BGP adjacency"
* UPDATE Message:This message is used to communicate network reachability information (NLRI). It carries prefixes that are being advertised, path attributes associated with those prefixes, and/or prefixes that are being withdrawn.
* Matches:"advertises, updates, or withdraws routes"
* KEEPALIVE Message:These messages are sent periodically between BGP peers within the agreed- upon Hold Time interval. Their primary purpose is to confirm that the peer is still alive and the session is active, especially when there are no UPDATE messages to send.
* Matches:"ensures that BGP peers are still alive"
* NOTIFICATION Message:This message is sent when a BGP error condition is detected (e.g., malformed message, unacceptable parameters in an OPEN message, hold timer expiry). Sending or receiving a NOTIFICATION message immediately causes the BGP session to terminate.
* Matches:"indicates error condition to a BGP neighbor"
* Route Refresh:This is a BGP capability (defined in RFC 2918) that allows a BGP speaker to request its peer to resend its routing updates for a specific address family, typically used after a policy change without requiring a full BGP session reset.
* Matches:"request a BGP peer to resend updated messages"
References:RFC 4271 (BGP4 Specification - Section 4, Messages), RFC 2918 (BGP Route Refresh Capability). This relates to the "Routing" (16%) objective.

NEW QUESTION # 12
A customer deployment with 40 locations and an average of 500 access points per location is being deployed in HPE Aruba Networking Central. Gateways are used to tunnel the traffic for each location and should be detected and built automatically.

What is the correct approach for the cluster setup?

- A. Automatic: Auto Group
- B. Manual: Auto Cluster
- C. Automatic: Auto Site
- D. Manual: Auto Config

Answer: C

Explanation:
In large multi-site deployments, HPE Aruba Networking Central supports Automatic: Auto Site for gateway clustering. This allows gateways to be automatically detected, grouped by site, and clustered without manual intervention - ideal for scaling across 40 locations with hundreds of APs per site.

NEW QUESTION # 13
In an HPE network, which scenarios can indicate a configuration issue with Link Aggregation (LACP)?

- A. Spanning tree topology changes
- B. Unstable link state
- C. Increased latency on traffic paths
- D. Port flapping

Answer: B,C,D

NEW QUESTION # 14
Exhibit.

After an initial setup of CX 8325 VSX configuration, the active gateway is set up for SVI 10. For testing purposes. SVI 10 on sw-agg1 is shut down while traffic from the client connected to Edge-1 is initiated towards the default route.
What is the expected behavior white performing this test?

- A. Traffic Is unaffected and a 50nsfailover time is expected for agg-sw2 to start traffic forwarding.
- B. Traffic is potentially dropped between the client and the destination.
- C. Traffic is dropped and vsx-sync will disable SVI10 on agg-sw2 automatically.
- D. Traffic is forwarded over the ISL without the risk of dropped packets.

Answer: A

Explanation:
The question involves a VSX configuration with CX 8325 switches (agg-sw1 and agg-sw2) where SVI 10's active-gateway is set up. For testing, SVI 10 on agg-sw1 is shutdown, and traffic from a client connected to Edge-1 is initiated toward the default route. The task is to determine the expected behavior.
* Analysis of Options:
* Option A:Incorrect. Traffic is not dropped, as VSX ensures redundancy via the active-gateway on agg-sw2.
* Option B:Incorrect. Traffic does not traverse the ISL unnecessarily; agg-sw2 takes over directly.
* Option C:Correct. Traffic continues unaffected, with a 50ms failover time for agg-sw2 to assume forwarding responsibilities for SVI 10.
* Option D:Incorrect. Traffic is not dropped, and vsx-sync does not disable SVI 10 on agg-sw2; it ensures consistency.
* Why Option C is Correct:In a VSX cluster with active-gateway, both switches (agg-sw1 and agg- sw2) share a virtual IP and vMAC for SVI 10, allowing either to respond to ARP requests and forward traffic. Shutting down SVI 10 on agg-sw1 triggers agg-sw2 to take over Layer 3 forwarding, leveraging the active-gateway configuration. VSX's fast failover mechanism ensures a typical failover time of approximately 50ms, making the transition seamless for clients on Edge-1. The vsx-sync feature ensures SVI configurations remain consistent, preventing traffic disruption. This behavior aligns with HPE Aruba Networking's VSX high-availability design.
* Relevance to Certification Objectives:
* Network Resiliency and Virtualization (8%):Designing and troubleshooting VSX for high availability.
* Routing (16%):Ensuring seamless Layer 3 forwarding in VSX environments.
* Troubleshooting (10%):Diagnosing failover behavior in campus networks.
