C-S4EWM-2023 Exam Exercise - Your Sharpest Sword to Pass SAP Certified Associate - SAP S/4HANA Cloud Private Edition, Extended Warehouse Management

The learning material is available in three different easy-to-use forms. The first one is a PDF form. The students can save the C-S4EWM-2023 questions by taking out their prints or can access them on their smartphones, tablets, and laptops. The PDF form can be used anywhere anytime and is essential for applicants who like to learn from their smart devices. The second form is SAP Certified Associate - SAP S/4HANA Cloud Private Edition, Extended Warehouse Management (C-S4EWM-2023) web-based practice test which can be taken from browsers like Firefox, Microsoft Edge, Google Chrome, and Safari.

SAP C-S4EWM-2023 Exam Syllabus Topics:

Topic	Details
Topic 1	• Warehouse Management (Monitor - Cockpit): This topic involves monitoring warehouse activities using the Warehouse Management Monitor, Warehouse Cockpit, and analytical apps.
Topic 2	• Warehouse Processing, Warehouse Task and Order Creation, Strategies: This topic includes defining warehouse process types and setting up determination, as well as defining putaway and picking strategies.
Topic 3	• Shipping and Receiving: It focuses on configuring Yard Management, SAP Dock Appointment Scheduling, and using the Shipping Cockpit.
Topic 4	• Cross Topics (Labor Management, Exception Handling, Batches, Serial Numbers): This topic includes setting up labor management and exception handling, and working with additional product information.
Topic 5	• Warehouse Structure, Resource Management and SAP EWM Master Data: This topic encompasses defining the warehouse structure and setting up resource management, along with creating SAP EWM master data like storage bins and products, packaging specifications, supply chain units, and business partners.
Topic 6	• Inbound Processes (Value Added Services, Cross-docking, Quality Management): This topic includes executing inbound processes with value added services (VAS) or deconsolidation, and setting up deliveries for cross-docking (CD) or quality inspection (QIE).
Topic 7	• Process and Layout Oriented Storage Control: It covers creating customizing settings and using Process and Layout-Oriented Storage Control.
Topic 8	• Internal processing (Physical Inventory, Replenishment): This topic involves defining physical inventory processes and setting up and executing replenishment.
Topic 9	• Managing Clean Core: It covers evaluating and applying clean core principles to ERP to maximize business process agility, reduce adaptation efforts, and accelerate innovation.

SAP Certified Associate - SAP S/4HANA Cloud Private Edition, Extended Warehouse Management Sample Questions (Q20-Q25):

NEW QUESTION # 20
With decentralized EWM, you can skip certain document categories. Which document category combination is still mandatory?

- A. An outbound delivery order and an outbound delivery
- B. A production material request and a stock transfer
- C. A posting change request and a posting change
- D. An outbound delivery request and an outbound delivery order

Answer: A

Explanation:

Comprehensive and Detailed In-Depth Explanation:
In decentralized EWM, some document categories can be bypassed, but option A ("An outbound delivery order and an outbound delivery") is mandatory because the outbound delivery order (ODO) is created in EWM from an ERP outbound delivery request, and the outbound delivery is completed after processing, configured in SPRO: SCM Extended Warehouse Management > Goods Issue Process > Outbound Delivery.
Other combinations (B, C, D) can be optional or situational.

NEW QUESTION # 21
Which distribution methods can you use to replicate delivery documents from an SAP ERP system to SAP Extended Warehouse Management? Note: There are 2 correct answers to this question.

- A. Core Interface (CIF) distribution mode
- B. Immediate distribution at document creation
- C. Manual distribution
- D. Distribution via Post Processing Framework (PPF) actions

Answer: B,D

Explanation:
Comprehensive and Detailed In-Depth Explanation:
Replication of delivery documents from SAP ERP to EWM relies on integration methods. Option C ("Distribution via Post Processing Framework (PPF) actions") is correct because PPF actions in ERP trigger the creation and transfer of delivery documents to EWM, configured in SPRO: Logistics Execution > Extended Warehouse Management Integration > PPF Actions. Option D ("Immediate distribution at document creation") is correct as it allows real-time replication upon saving the delivery in ERP via qRFC, set up in the output control. CIF (A) is used for master data, not deliveries, and manual distribution (B) is not a standard automated method in EWM integration.

NEW QUESTION # 22
You want to use Labor Management. For which combination must you activate Labor Management?

- A. Warehouse number and warehouse process type
- B. Warehouse number and external process step
- C. Warehouse number and labor activity
- D. Warehouse number and internal process step

Answer: D

Explanation:
Labor Management Activation
* To utilize labor management effectively, it must be activated at the warehouse number and internal process step level, as these define the operational tasks within the warehouse.
Excluded Options
* A (External Process Step): External steps are not used for labor tracking.
* C (Warehouse Process Type): While process types are relevant, labor management activation occurs at a higher level.
* D (Labor Activity): Labor activity is defined within labor management but not used for activation.
SAP S/4HANA Cloud Private Edition Reference
* Refer to Labor Management Activation and Configuration in EWM.

NEW QUESTION # 23
What can you do with evaluation points?

- A. Influence which items shall be picked first.
- B. Influence the search sequence of storage types, storage sections, and bin types.
- C. Influence which warehouse order is assigned to a resource.
- D. Use them to measure the efficiency of your warehouse.

Answer: B

Explanation:
Evaluation points in SAP EWM are used to:
* C. Influence the Search Sequence of Storage Types, Storage Sections, and Bin Types:
* Evaluation points are part of storage type search logic.
* They assign priorities to storage types, sections, or bins to determine where goods are stored or picked from first.
Incorrect Options:
* A: Evaluation points do not influence resource assignment for warehouse orders.
* B: They do not directly influence picking priority; this is handled by warehouse task rules.
* D: Evaluation points are not used for measuring warehouse efficiency.
References:
* SAP EWM Documentation: Storage Type Search Sequence
* SAP Help Portal: Configuration of Evaluation Points in EWM

NEW QUESTION # 24
You want to use Labor Management. For which combination must you activate Labor Management?

- A. Warehouse number and labor activity
- B. Warehouse number and internal process step
- C. Warehouse number and processor
- D. Warehouse number and warehouse process type

Answer: D

Explanation:
Labor Management (LM) in SAP S/4HANA Cloud Private Edition, Extended Warehouse Management (EWM) is a functionality designed to plan, manage, and monitor workforce activities within a warehouse. It helps optimize labor resources by tracking activities, calculating planned durations, and measuring performance. To activate and utilize Labor Management effectively, specific configuration settings must be defined in the system. The correct combination for activation involves the warehouse number and the warehouse process type, as these two elements together determine the scope and nature of warehouse processes where labor activities are tracked.
Step-by-Step Explanation:
Understanding Labor Management in SAP EWM
Labor Management is an advanced feature in SAP EWM that enables warehouse managers to plan labor requirements, monitor execution, and evaluate performance. It integrates with warehouse processes to provide insights into resource utilization.
In SAP S/4HANA Cloud Private Edition, EWM Labor Management is embedded and leverages warehouse-specific configurations to function correctly.
Key Configuration Elements for Labor Management
Warehouse Number: This is the highest organizational unit in SAP EWM, representing a physical or logical warehouse. All processes and activities within EWM are tied to a specific warehouse number.
Warehouse Process Type: This defines the type of process executed in the warehouse (e.g., goods receipt, picking, putaway, packing). It categorizes the tasks performed and links them to specific activities that Labor Management can track.
Labor Management requires these two elements to be combined because they collectively identify the scope of operations and the specific processes where labor activities need to be planned and monitored.
Activation of Labor Management
To activate Labor Management, you must enable it at the warehouse level and specify which processes within that warehouse will utilize LM. This is done in the SAP EWM configuration under Labor Management settings.
In the SAP Easy Access menu, navigate to Extended Warehouse Management > Settings > Labor Management > Activate Labor Management. Here, you specify the warehouse number and link it to relevant warehouse process types.
The activation is not tied to labor activity, internal process step, or processor alone, as these are subsequent elements used in execution rather than activation.
Why "Warehouse Number and Warehouse Process Type" is Correct
Warehouse Number: Determines the warehouse where Labor Management will be applied. Without specifying the warehouse, the system cannot scope the labor activities.
Warehouse Process Type: Defines the specific processes (e.g., picking, putaway) within the warehouse that require labor tracking. This ensures that Labor Management is activated only for relevant processes, making it granular and process-specific.
Together, they form the foundational combination for enabling Labor Management, as documented in SAP EWM configuration guides and help documentation.
Evaluation of Other Options
A . Warehouse number and labor activity: Labor activity (e.g., picking, walking) is defined later in the Labor Management process to calculate durations and performance. It is not part of the initial activation combination.

B . Warehouse number and internal process step: Internal process steps (e.g., verification, transport) are detailed sub-steps within a process type and are not directly used to activate Labor Management at a high level.

D . Warehouse number and processor: A processor (worker or resource) is an operational entity executing tasks, not a configuration element for activating Labor Management. Processors are assigned after LM is activated.

SAP S/4HANA Cloud Private Edition, EWM References

SAP Help Portal: The official documentation under "SAP Extended Warehouse Management > Labor Management > Configuration" specifies that Labor Management activation requires settings at the warehouse level and association with process types. Refer to the section on "Activating Labor Management" for detailed steps.

What's New in SAP S/4HANA 2023 FPS03: The introduction of Predictive Labor Demand Planning (LDP) reinforces the linkage between warehouse processes and labor tracking, emphasizing process types as a key element (SAP Community Blog, Feb 27, 2025).

SAP Learning: Courses like "SAP S/4HANA Cloud Private Edition, Extended Warehouse Management" (C_S4EWM_2023) highlight configuration dependencies on warehouse number and process type for LM activation.

Conclusion

The combination of warehouse number and warehouse process type is the verified answer because it aligns with SAP EWM's configuration logic for enabling Labor Management. This combination ensures that labor tracking is scoped to a specific warehouse and its relevant processes, providing a structured foundation for subsequent LM functionalities like task assignment and performance evaluation.

NEW QUESTION # 25

......

As the quick development of the world economy and intense competition in the international, the world labor market presents many new trends: company's demand for the excellent people is growing. As is known to us, the C-S4EWM-2023 certification is one mainly mark of the excellent. If you don't have enough ability, it is very possible for you to be washed out. On the contrary, the combination of experience and the C-S4EWM-2023 Certification could help you resume stand out in a competitive job market. Our C-S4EWM-2023 exam questions is specially designed for you to pass the C-S4EWM-2023 exam.
