NCLEX National Council Licensure Examination(NCLEX-RN) Sample Questions (Q257-Q262):

NEW QUESTION # 257

A 74-year-old obese man who has undergone open reduction and internal fixation of the right hip is 8 days postoperative. He has a history of arthritis and atrial fibrillation. He admits to right lower leg pain, described as "a cramp in my leg." An appropriate nursing

action is to:

- A. Assess for edema and heat of the right leg
- B. Elevate right lower extremity with pillows propped under the knee
- C. Assess for pain with plantiflexion
- D. Instruct him to rub the cramp out of his leg

Answer: A

Explanation:

Explanation/Reference:

Explanation:

(A) Calf pain with dorsiflexion of the foot (Homans' sign) can be a sign of a deep venous thrombosis; however, it is not diagnostic of the condition. (B) Swelling and warmth along the affected vein are commonly observed clinical manifestations of a deep venous thrombosis as a result of inflammation of the vessel wall. (C) Rubbing or massaging of the affected leg is contraindicated because of the risk of the clot breaking loose and becoming an embolus. (D) A pillow behind the knee can be constricting and further impair blood flow.

NEW QUESTION # 258

Cystic fibrosis is transmitted as an autosomal recessive trait. This means that:

- A. Mothers carry the gene and pass it to their sons
- B. Both parents must have the disease for a child to have the disease
- C. Fathers carry the gene and pass it to their daughters
- D. Both parents must be carriers for a child to have the disease

Answer: D

Explanation:

Section: Questions Set G

Explanation:

(A) Cystic fibrosis is not an X-linked or sex-linked disease. (B) The only characteristic on the Y chromosome is the trait for hairy ears. (C) Both parents do not need to have the disease but must be carriers. (D) If a trait is recessive, two genes (one from each parent) are necessary to produce an affected child.

NEW QUESTION # 259

In teaching the client about proper umbilical cord care, the nurse recommends that:

- A. A belly binder be applied to prevent umbilical hernia
- B. Petrolatum be placed around the cord after the sponge bath
- C. The area be cleansed at diaper changes with alcohol and inspected for redness or drainage
- D. The cord clamp be left on until the cord stump separates

Answer: C

Explanation:

Explanation/Reference:

Explanation:

(A) Petrolatum does not allow the cord to dry and will encourage infection. (B) Belly binders do not facilitate drying of the cord and will encourage abdominal relaxation. (C) Frequent applications of alcohol will facilitate drying and discourage infection. (D) The cord clamp can be removed in 24 hours. Leaving it on is cumbersome and could pull on the cord unnecessarily.

NEW QUESTION # 260

A 2-year-old boy is in the hospital outpatient department for observation after falling out of his crib and hitting his head. The nurse calls the physician to report:

- A. Pulse fell from 102 to 96
- B. Evidence of perineal irritation

- C. Temperature rose to 102_F rectally
- D. Pulse increased from 96 to 102

Answer: C

Explanation:

Explanation

(A) Perineal irritation needs to be addressed, but it is probably not necessary to call the physician. (B) This fall in pulse rate remains within normal limits and is probably insignificant. It is important to monitor for continued change. (C) This rise in pulse rate is probably not significant, but it is important to monitor for continued change. (D) This temperature is above normal limits and needs medical investigation. It may or may not be related to the head injury.

NEW QUESTION # 261

The nurse has been assigned a client who delivered a 6- lb, 12-oz baby boy vaginally 40 minutes ago. The initial assessment of greatest importance for this client would be:

- A. Length of her labor
- B. Amount of IV fluid to be infused
- C. Type of episiotomy
- D. Character of the fundus

Answer: D

Explanation:

Explanation

The length of labor has little bearing on the fourth stage of labor. The type of labor and delivery is significant.

(B) The type of episiotomy will affect the client's comfort level. However, the nurse's assessment and implementations center on prevention of hemorrhage during the fourth stage of labor. The amount of bleeding from the episiotomy or hematoma formation is of higher priority than the type of episiotomy. (C) The amount of IV fluid to be infused is a nursing function to be attended to; however, it is lower in priority than determining if hemorrhaging is occurring. (D) Character of the fundus would be the priority nursing assessment because changes in uterine tone may identify possible postpartum hemorrhage.

NEW QUESTION # 262

.....

With the rise of internet and the advent of knowledge age, mastering knowledge about computer is of great importance. This NCLEX-RN exam is your excellent chance to master more useful knowledge of it. Up to now, No one has questioned the quality of our NCLEX-RN training materials, for their passing rate has reached up to 98 to 100 percent. Our NCLEX Certification study dumps are priced reasonably so we made a balance between delivering satisfaction to customers and doing our own jobs. So in this critical moment, our NCLEX-RN real materials will make you satisfied. Our NCLEX-RN exam materials can provide integrated functions. You can learn a great deal of knowledge and get the certificate of the exam at one order like win-win outcome at one try.
