There is no denying the fact that everyone in the world wants to find a better job to improve the quality of life. Generally speaking, these jobs are offered only by some well-known companies. In order to enter these famous companies, we must try our best to get some certificates as proof of our ability such as the ISTQB-CTFL Certification. Nowadays, the ISTQB-CTFL certification has been one of the criteria for many companies to recruit employees. And in order to obtain the ISTQB-CTFL certification, taking the ISTQB-CTFL exam becomes essential.

What ISTQB-CTFL study quiz can give you is far more than just a piece of information. First of all, ISTQB-CTFL preparation questions can save you time and money. As a saying goes, to sensible men, every day is a day of reckoning. Every minute ISTQB-CTFL study quiz saves for you may make you a huge profit. Secondly, ISTQB-CTFL learning guide will also help you to master a lot of very useful professional knowledge in the process of helping you pass the exam.

New ISTQB-CTFL Exam Prep - Exam ISTQB-CTFL Syllabus

We always lay great emphasis on the quality of our ISTQB-CTFL study guide. Never have we been complained by our customers in the past ten years. The manufacture of our ISTQB-CTFL real exam is completely according with strict standard. We do not tolerate any small mistake. We have researched an intelligent system to help testing errors of the ISTQB-CTFL Exam Materials. That is why our ISTQB-CTFL practice engine is considered to be the most helpful exam tool in the market.

ISTQB Certified Tester Foundation Level (CTFL v4.0) Sample Questions (Q375-Q380):

NEW QUESTION # 375

In order to exercise the right to vote, a person must meet the following requirements:

be able to prove citizenship of the country

be a resident in the administrative unit concerned

have a minimum age of 18 years

no other reasons for exclusion exist

Create the associated decision table and minimize it so that all conditions are correctly covered.

Hint: remember to use the "no other reasons for exclusion exist" condition when creating the decision table.

How many test cases are at least required to achieve the coverage of all decision rules and what could be the concrete test cases?

- A. 2 test cases. 1 test case where all 4 conditions are fulfilled and 1 test case where all 4 conditions are not fulfilled.

- B. 5 test cases. 1 test case where all 4 prerequisites are fulfilled and 4 test cases for exactly one unfulfilled prerequisite each.
- C. 8 test cases. With 4 conditions, each of which can be true or false, there are 8 (4×2) possible combinations to be tested.
- D. 16 test cases. With 4 conditions, each of which can be true or false, there are 16 (2 to the power of 4) possible combinations to be tested.

Answer: B

NEW QUESTION # 376

Which of the following is an INCORRECT statement about the benefit of traceability between the test basis and test work products?

- A. Traceability may make it harder to understand the impact of changes
- B. Traceability may allow testing to be auditable
- C. Traceability may be required by IT governance rules
- D. Traceability may help evaluate the extent of test coverage

Answer: A

Explanation:

The statement "Traceability may make it harder to understand the impact of changes" is incorrect.

Traceability in testing actually facilitates understanding the impact of changes by linking test cases to requirements. This linkage helps ensure that any changes in the requirements are adequately reflected and verified in the test cases, thus supporting effective management of changes and maintaining the integrity of the system or product being developed(ISTQB not-for-profit association) (ISTQB Main Web).References:

NEW QUESTION # 377

The following 4 equivalence classes are given:

Which of the following alternatives includes correct test values for x, based on equivalence partitioning?

- A. -500; 0; 100; 1000
- B. -99; 99; 101; 1001
- C. -100; 100; 1000; 1001
- D. -1000; -100; 100; 1000

Answer: D

Explanation:

The question is about selecting the correct test values for x based on equivalence partitioning. Equivalence partitioning is a software test design technique that divides the input data of a software unit into partitions of equivalent data from which test cases can be derived. In this case, the given equivalence classes are:

$(x \leq -100)$
 $(-100 < x < 100)$
 $(100 \leq x < 1000)$
 $(x \geq 1000)$

Option D provides a value from each of these partitions:

For $(x \leq -100)$, it gives -1000.

For $(-100 < x < 100)$, it gives -100 and 100.

For $(100 \leq x < 1000)$, it gives 500.

For $(x \geq 1000)$, it gives 1500.

So, option D covers all four given equivalence classes with appropriate values.

NEW QUESTION # 378

Which ONE of the following elements is TYPICALLY part of a test plan?

- A. A detailed report on the test results after the test project is completed.
- **B. The budget and schedule for the test project.**
- C. A list of test logs from the test execution.
- D. A detailed analysis of the defects found and their causes.

Answer: B

Explanation:

Comprehensive and Detailed In-Depth Explanation: A test plan is a management document that outlines the scope, objectives, schedule, resources, and risks of the testing process. The budget and schedule (B) are essential components as they help plan resources and timeline constraints.

* (B) is incorrect because defect analysis is part of the test summary report, not the test plan.

* (C) is incorrect because final reports summarize execution, while the test plan is created before testing starts.

* (D) is incorrect because test logs are execution artifacts rather than planning elements.

A test plan guides testing activities and ensures alignment with project objectives.

NEW QUESTION # 379

Which of the following statements contradicts the general principles of testing?

- A. Most defects are found in a small subset of a system's modules.
- B. How testing is done, is based on the situation in a particular project.
- **C. If new defects are to be found we should run the same test set more often.**
- D. Testing is better if it starts at the beginning of a project.

Answer: C

Explanation:

Statement B contradicts the general principles of testing, because running the same test set more often will not increase the chances of finding new defects, unless there are some changes in the system or environment that affect the test results. Running different test sets with different inputs, outputs or conditions would be more effective in finding new defects. Statements A, C and D are consistent with the general principles of testing. Statement A states that most defects are found in a small subset of a system's modules, which is true according to the defect clustering principle. Statement C states that testing is better if it starts at the beginning of a project, which is true according to the early testing principle. Statement D states that how testing is done, is based on the situation in a particular project, which is true according to the context-dependent testing principle. NEW QUESTION # 380

.....

The TroytecDumps wants to help students ace the certification exam preparation. To achieve this goal the TroytecDumps is offering real, valid, and updated exam questions in three different formats. These ISTQB ISTQB-CTFL exam questions formats are PDF file, desktop practice test software, and web-based practice test software. All these three ISTQB-CTFL Exam Practice question formats are easy to use. The ISTQB-CTFL desktop practice test software and web-based practice test software both are the easy-to-use mock ISTQB Certified Tester Foundation Level (CTFL v4.0) (ISTQB-CTFL) exam. These ISTQB-CTFL mock exams are designed to simulate the conditions of a real exam.
